

**INCIDENT MANAGEMENT SITUATION REPORT**  
**SATURDAY, APRIL 8, 2006 – 0800 MDT**  
**NATIONAL PREPAREDNESS LEVEL 2**

**CURRENT SITUATION:**

Initial attack activity was moderate nationally with 203 new fires reported. Six new large fires were reported, three in the Southern Area, two in the Eastern Area, and one in the Southwest Area. Three large fires were contained, two in the Southern Area, and one in the Southwest Area. Very high to extreme fire indices were reported in Minnesota.

**SOUTHERN AREA INCIDENTS/LARGE FIRES:**

WEST TEXAS IA, Texas Forest Service. A Texas State Type 2 Incident Management Team (Hanneman) is assigned in Midland, TX. The Team is assisting local jurisdictions with managing initial and extended attack fires within the 140 million acre fire management response area. The Team is managing the Utopia and Bowers City fires. Acres, structure losses and costs represent cumulative fire activity for the response area.

KRPT, Anadarko Agency, Bureau of Indian Affairs. This fire is one mile north of Anadarko, OK in grass. Grazing land remains threatened. High winds and low relative humidity are hampering containment efforts. Interior pockets of fuel continue to burn.

LEWIS MOUNTAIN, Shenandoah National Park. This fire is four miles east of Grottoes, VA in leaf litter, bug kill pine and timber understory. Moderate fire activity with some torching was reported. Burn out operations to improve line construction continue. Three recreation trails remain closed.

UTOPIA, Texas Forest Service. This fire started on private land in Uvalde County, TX in grass, brush and hardwood litter. The fire is being managed under West Texas, IA. No further information was received.

FLATSIDE, Ouachita National Forest. This fire is in Garland County, AR in light logging slash and timber. The fire is located within the Flatside Wilderness Area. No further information was received.

CEMENT, Anadarko Agency, Bureau of Indian Affairs. This fire is half a mile west of Cement, OK in grass. Interior pockets of fuel continue to actively burn.

FAIN PLANT, Texas Forest Service. This fire started on private land north of Amarillo, TX in grass. The fire is being managed under West Texas IA. No new information was reported.

BOWERS CITY, Texas Forest Service. This fire started on private land south of Pampa, TX in grass. The fire is being managed under West Texas IA. No new information was reported.

FORSAN, Texas Forest Service. This fire started on private land 13 miles southeast of Big Spring, TX in grass. The fire is being managed under West Texas IA. No new information was reported.

DICKIE RANCH, Texas Forest Service. This fire started on private land south of Woodson TX, in grass. No new information was reported.

FORSAN #2, Texas Forest Service. This fire started on private land four miles southeast of Forsan, TX in grass. This fire is being managed under West Texas IA. No new information was reported.

#### EASTERN AREA INCIDENTS/LARGE FIRES:

RED LAKE 16, Red Lake Agency, Bureau of Indian Affairs. This fire is 20 miles west of Red Lake, MN in grass. Rapid rates of spread and six to eight foot flame lengths were reported. A burn out operation secured control lines, and the fire is being monitored.

EAST PONG, Mark Twain National Forest. This fire is east of Viburnum, MO in hardwood litter. Moderate fire behavior with some spotting was reported. No further information was received.

## OUTLOOK:

**Weather Discussion:** High pressure will build over the Southwest and Southern Plains for dry weather and lighter winds. A cold front will bring rain to portions of Mid-Atlantic and Southeast States.

Geographic Area Weather	High Temperatures	Minimum Relative Humidity	Wind
<b>Southern Area</b> Northeast North Carolina: Thunderstorms with 0.25 inches of rain. Northern VA: More showers and thunderstorms with 0.50 inches of rain. West Central OK: Partly cloudy. Southwest TX: Partly cloudy.  Northwest Texas (Panhandle): Partly cloudy.	Middle 70s.  Around 70.  Middle 60s. Upper 60s to middle 70s. 65 to 70.	55 to 65%.  60 to 65%.  30 to 40%. 20 to 30%.  25 to 30%.	South at 10 to 20, gusting to 25 mph.  North 5 to 10 mph.  North 10 to 20 mph. Northeast 5 to 10 mph.  North 5 to 10, becoming south.
<b>Southwest Area</b> Cooler and more humid across eastern New Mexico and west Texas, otherwise fair skies and warmer with light winds across the Southwest Area.	Upper 60s to upper 80s lower elevations and upper 40s to upper 60s across the higher elevations of the Southwest Area.	5 to 15% lower elevations of Arizona and western New Mexico. 15% to 25% across the remainder of the Southwest Area.	Winds becoming south to southwest 10 to 20 mph during the afternoon across the Southwest Area.
<b>Southern California Area</b> Partly cloudy central California. Mostly sunny southern California.	50 to 65 mountains. 60 to 75 valleys. 60 to 75 upper deserts. 75 to 85 lower deserts.	20 to 40%.	Southeast to southwest 5 to 15 mph.
<b>Eastern Area</b> No information was reported.

## Hazard Trees

Snags (dead, standing trees without leaves or needles in the crowns) and other hazard trees present a significant hazard to wildland firefighters. Snags typically have much lower fuel moistures than live, green trees; and they burn more readily. In the process, they often throw spot fires far in advance of the main fire and often burn through more quickly than green trees, falling with little or no warning. Live, green trees have been weakened by insects, disease, weather, past fires, and age present equal hazard and can fall without warning.

- The risk of injuries from hazard trees increases during the night operational period when visibility is greatly reduced.
- While the cooler, nighttime period is generally a more effective time to gain control of wildfires, the increased risk from unseen falling snags and weakened live trees may limit the widespread use of crews at night in areas of dead and dying timber.
- Environmental conditions that increase risk from hazard trees: Strong winds or erratic winds from storm cells. Night operations. Air operations - cargo drops, water or retardant drops, helicopter take off/landing, low-level flights. Steep slopes. Diseased or bug-killed areas.
- Things to consider when assessing the potential dangers of hazard trees: Trees have been burning for an extended period. High-risk tree species (those that are known for rot and shallow root systems) are in the area. Numerous downed trees. Dead or broken tips and limbs overhead. Accumulation of downed limbs. Tree decay, cavities, splits, cracks. Absence of needles, bark or limbs. Leaning or hung-up trees. Roots damaged by equipment or erosion.
- Mitigation measures to take: Identify and flag all high-risk areas until the hazard has been removed. Keep personnel out of the high-risk areas until the hazard has been removed. Use saw teams and falling bosses. Establish lookouts. Plan a quick and safe escape route. Do not turn your back on a falling tree. Maintain situational awareness.
