

**National Interagency Coordination Center
Incident Management Situation Report
Thursday, June 7, 2007 - 0530 MDT
National Preparedness Level 2**

National Fire Activity

Initial attack activity:	Light (137 new fires)
New large fires:	0 (*)
Large fires contained:	1
Uncontained large fires:	13
Area Command Teams committed:	
NIMOs committed:	1
Type 1 IMTs committed:	2
Type 2 IMTs committed:	4
Fire Use Teams committed:	

** Uncontained large fires do not include WFU or confine/contain incidents. **

Southern Area (PL 4)

New fires:	50
New large fires:	0
Uncontained large fires:	8
Type 1 IMTs committed:	1
Type 2 IMTs committed:	2

Big Turnaround Complex, Okefenokee NWR. IMT 1 (Ruggiero). Ten miles southeast of Waycross, GA. Southern rough and timber. Smoldering. Numerous structures, historic sites and recreation facilities remain threatened.

Sweat Farm Road, Georgia Forestry Commission. Transfer of command from North Carolina IMT 2 (Hildreth) to Georgia IMT 2 (Floyd) today. IMT also managing Bugaboo Scrub 2 fire. Started on private land 10 miles west of Waycross, GA. Southern rough and timber. Smoldering and creeping.

Deland Complex (seven fires), Florida DOF. Six miles west of Ormond Beach. Southern rough. Active burning in swamps. Reburning remains a problem. Residences threatened.

Dairy Road, Florida DOF. Seven miles northwest of Keystone Heights, FL. Southern rough. Active interior burning.

Bugaboo Scrub 2, Started on private land four miles east of Fargo, GA. Southern rough and timber. Smoldering and creeping.

BICY Complex (four fires), Big Cypress National Preserve. Fifty-one miles west of Ft. Lauderdale, FL. Southern rough. No further information received.

Okeechobee Complex (three fires), Florida DOF. Eight miles southwest of Okeechobee, FL. Grass. Smoldering.

Middle of Nowhere, Florida DOF. Fifteen miles northeast of Ft. Myers, FL. Southern rough. Minimal fire activity.

Predictive Services Discussion: Dry and windy conditions will continue for eastern Arizona and New Mexico today. Cooler conditions with higher relative humidity will continue to filter into the West behind yesterday's cold front. Alaska will see cooler temperatures with showers today. Showers and thunderstorms will continue in Florida with drier conditions for the northern portions of the Southern Area.

HEAT DISORDERS

Heat becomes a problem when humidity, air temperature, and radiant heat combine with hard work to raise body temperature beyond safe limits. Sweat is your main defense. Everyone on the fireline must understand the importance of drinking water often.

High heat stress can produce three forms of heat related illness;

- Heat cramps
- Heat exhaustion
- Heat stroke

The mildest is heat cramps. Heat cramps can progress to heat exhaustion and eventually heat stroke. Heat cramps are involuntary muscle contractions, typically in the large muscle groups, caused by failure to replace fluids or electrolytes, such as sodium and potassium.

- Cramps can be relieved with stretching and by replacing fluids and electrolytes.
- Heat cramps can be prevented by maintaining an adequate intake of water, electrolyte replacement drinks and by eating fresh fruits and vegetables.

Heat exhaustion is characterized by:

- Weakness
- Extreme fatigue
- Nausea
- Headaches
- Wet, clammy skin

Heat exhaustion results when the body produces more heat than it can dissipate. Inadequate fluid intake is a major contributing factor. Treat heat exhaustion by resting in a cool environment, by removing clothing so that one's sweat can evaporate, and by replacing fluids and electrolytes. Heat stroke is caused by failure of the body's heat controls. Sweating stops and the body temperature rises.

Although classic teaching describes a heat stroke patient as "hot and dry", recent studies have shown that over 50% of heat stroke patients are sweating heavily. Typically, on the fireline we do not have medical thermometers. Therefore, the hallmark of heat stroke is altered mental status. You should suspect heat stroke if a firefighter is hot, fatigued, and shows some altered mental status, such as inability to remember the day or the current situation. They may ask, "Where am I?"

Heat stroke is characterized by:

- Hot, often dry skin
- Body temperature above 105.8 degrees Fahrenheit
- Mental confusion
- Loss of consciousness, convulsions, or even coma

Heat stroke is a medical emergency. Brain damage and death may result if treatment is delayed. Begin rapid cooling with ice or cold water, fanning the victim to promote evaporation. For rapid cooling, partially submerge the victim's body in cool water. Treat for shock if necessary. Provide oxygen if it is available. Whereas heat cramps and heat exhaustion may be treated locally, heat stroke patients should be medivacted off the line ASAP, by air if possible, as their condition may worsen suddenly.

You can prevent the serious consequences of heat disorders by improving your level of fitness and becoming acclimated to the heat. Maintaining a high level of aerobic fitness is one of the best ways to protect against heat stress. The fit worker has a well-developed circulatory system and increased blood volume. Both are important to regulate body temperature. Fit workers start to sweat sooner, so they work with a lower heart rate and body temperature. They adjust to the heat twice as fast as the unfit worker.
