

**National Interagency Coordination Center  
Incident Management Situation Report  
Friday, November 16, 2007 – 1000 MST  
National Preparedness Level 1**

**National Fire Activity (Weekly Total)**

Initial attack activity: Light (590 new fires)  
 New large fires: 14 (\*)  
 Large fires contained: 10  
 Uncontained large fires: 6  
 Area Command Teams committed: 0  
 NIMOs committed: 0  
 Type 1 IMTs committed: 0  
 Type 2 IMTs committed: 0  
 Fire Use Teams committed: 0

\*\* Uncontained large fires do not include WFU or confine/contain incidents. \*\*

**Southern Area (PL 2)**

New fires: 487  
 New large fires: 4  
 Uncontained large fires: 3

**Indian Boy**, Osage Agency, BIA. Three miles northwest of Wynona, OK. Timber and grass. Creeping, smoldering and isolated interior torching. Structures and petroleum wells threatened.

**Jackson Swamp**, North Carolina State DOF. Eight miles southeast of Lumberton, NC. Southern rough. Running and spotting.

**Recreation**, Florida State DOF. Thirty two miles west of Coral Springs, FL. Grass. No further information received.

**Predictive Services Discussion: Elevated fire potential next week in southern California with a critical fire weather event.** Windy and dry conditions will continue today across the central and southern Great Plains. Relative humidity will continue to drop in the Southeast with a very dry air mass in place. By next week, a strong Santa Ana wind event is expected in southern California (Tuesday through Thursday) and windy and dry conditions will develop across portions of the Southwest and southern Great Plains.

### **Serious Injury Procedures**

Dealing with serious injuries on the fireline can add even more stress to our hectic work environment. In the event a fireline accident occurs, adherence to the following principles is important to insure an adequate and appropriate response is made.

- Before entering the scene, determine whether it is safe to approach. Look for hazards as well as what may have happened. It may be necessary to move the patient or to make the area safe before doing an assessment.
- Provide first aid and assess the extent of the injuries.
- Make contact with your supervisor. Depending on the complexity of the fire, that could be your crew boss, the Division Supervisor, the IC, or even dispatch. If your fire has a medical plan, follow the plan.
- Provide them with accurate, concise information on the following
  - Number of people injured
  - Type of injuries
  - Severity of injuries (light, moderate, severe, life threatening)
  - Mechanism of injury
  - Vital signs (pulse, respirations, level of consciousness, etc)
- Determine the best method of evacuation. Depending on the severity of injury or availability of resources, this decision may already be made for you.
- Keep the radio frequency clear of non-emergency traffic, provide updates of the patients condition and await instructions.
- If evacuation is by helicopter, it may be necessary to construct a helispot. Document treatment provided in case it is necessary to send the information along with the patient in the aircraft.
- If the patient needs to be carried to a road, insure enough people are available to work in relays.
- Once the patient is clear, take a moment to write down witness statements, clean up notes and timelines, and document any other pertinent information.
