These accidents reinforce the need for being continually alert to the "Situations That Shout Watch Out" and ensuring that all of the "10 Standard Fire Fighting Orders" are followed before initiating tactical operations.

A simple concept to remember and share with crew members is "L.C.E.S." The acronym stands for Lookouts, Communication, Escape Routes, and Safety Zones. If a fire crew has these four areas fully established and understood, they can anticipate a safer assignment.

Timely reporting of entrapments or fatalities is necessary for the rapid dissemination of accurate information to the fire community. It also allows fire safety and equipment specialists to quickly respond to these events as appropriate. Completion of the Wildland Fire Entrapment/Fatality Initial Report (NFES 0869) accomplishes this need. This initial report is self explanatory and does not replace agency reporting or investigative responsibilities, policies or procedures.

The NWCG Safety & Health Working Team would appreciate Investigation Reports from agencies that experienced the above or other entrapments/ major accidents in 1996. Please forward to:

\*Entrapment: A situation where personnel are unexpectedly caught in a fire behavior-related, life-threatening position where planned escape routes or safety zones are absent, inadequate, or have been compromised. An entrapment may or may not include deployment of a fire shelter for its intended purpose. These situations may or may not result in injury. They include "near misses."
