

**Incident Management Situation Report  
Friday, March 3, 2023 – 0730 MDT  
National Preparedness Level 1**

**National Fire Activity (February 24, 2023 – March 2, 2023):**

<b>Fire Activity and Teams Assigned</b>	<b>Total</b>
Initial attack activity:	Light (542)
New large incidents:	16
Large fires contained:	9
Uncontained large fires: **	7
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0
<a href="#">Complex IMTs</a> committed:	0

Nationally, there is one fire being managed under a strategy other than full suppression.

\*\*Uncontained large fires only include fires being managed under a full suppression strategy.

## Southern Area (PL 1)

<b>Fire Activity and Teams Assigned</b>	<b>Total</b>
New fires:	508
New large incidents:	15
Uncontained large fires:	6

\* **Storm**, Okmulgee Agency, BIA. Four miles southwest of Mannford, OK. Timber. Minimal fire behavior with smoldering. Numerous structures threatened.

\* **Gillie**, National Forests in Mississippi, USFS. Seven miles southwest of Beaumont, MS. Southern rough and timber. Minimal fire behavior with backing and smoldering. Structures threatened.

\* **Middle Creek**, National Forests in Mississippi, USFS. Five miles northeast of Brooklyn, MS. Southern rough. Minimal fire behavior. Structures threatened.

\* **Solar Park**, Texas A&M Forest Service. Started on private land seven miles west of Fort Davis, TX. Timber. Moderate fire behavior with creeping and smoldering.

\* **Squirrel Tree**, Buffalo National River, NPS. Four miles south of St. Joe, AR. Hardwood litter. Minimal fire behavior with creeping.

\* **Miss White**, Buffalo National River, NPS. Five miles north of Snowball, AR. Timber. Minimal fire behavior with smoldering and creeping.

\* **Melbourne**, Florida Forest Service. Started on private land 14 miles northeast of Alpine, FL. Southern rough. Minimal fire behavior with smoldering and creeping. Last narrative report unless significant activity occurs.

**Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.**

## **Predictive Services Discussion:**

Elevated to critical fire weather conditions are expected in southwest and south Texas today due to gusty west-northwest winds amid relative humidity of 5-25% behind a dry cold front. Another round of elevated to critical conditions are likely Sunday – Monday on the southern High Plains into Big Bend and southern and central New Mexico due to strong winds overlapping low relative humidity. Minimum relative humidity will drop below 40% on portions of the Florida Peninsula today with breezy southwest winds. Dry and breezy post-frontal conditions are likely in portions of the Deep South today as well. Parts of the Gulf and Southeast Coasts are likely to receive little to no precipitation into next week.

Upper-level troughing will develop over the northwestern CONUS bringing widespread and heavy precipitation to the Pacific Northwest along and west of the Cascades through northern California this weekend into early next week, including heavy snow and strong winds in the Sierra. Precipitation, mostly snow, will spread across the northern Intermountain West, northern Plains, and Great Lakes tonight into early next week as well. Temperatures are likely to be below normal for the West and above normal in much of the southern and eastern CONUS this weekend into early next week before below normal temperatures spread across much of the CONUS mid to late next week. Precipitation will return to portions of the southern and central Plains and Southeast mid to late next week.
