

**Incident Management Situation Report  
Friday, October 27, 2023 – 0730 MDT  
National Preparedness Level 1**

**National Fire Activity (October 20, 2023 – October 26, 2023):**

<b>Fire Activity and Teams Assigned</b>	<b>Totals</b>
Initial attack activity:	Light (538 fires)
New large incidents:	7
Large fires contained:	1
Uncontained large fires: **	9
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0
<a href="#">Complex IMTs</a> committed:	1

Nationally, there are two fires being managed under a strategy other than full suppression.

\*\*Uncontained large fires include only fires being managed under a full suppression strategy.

[Geographic Area daily reports](#)

[Understanding the IMSR](#)

This report will be posted every Friday at 0730 Mountain Time unless significant activity occurs.

## **Predictive Services Discussion:**

A cold front will push southward through the West today and tomorrow, with dry and windy conditions likely in the Central Valley and surrounding foothills and in southeast California through southern Nevada and the Lower Colorado River Valley tomorrow into Sunday. Offshore winds will also develop this weekend into Monday from the Bay Area southward through southern California, with the strongest winds and most critical fire weather conditions expected in the Transverse and Peninsular Ranges of southern California Saturday night through Monday morning. Winds will weaken Monday, but low relative humidity will continue across much of southern California, southern Nevada, and western Arizona. Another round of precipitation will begin to impact the Pacific Northwest mid to late next week.

A cold front will begin to stall on the southern Plains while continuing to push eastward through the Great Lakes and Northeast today and tomorrow, with another surge of cold air pushing southeast across the central and eastern US late tomorrow night into Tuesday. Precipitation will stretch from south Texas northeast through the Great Lakes and into the Northeast near the cold front, including areas of heavy rain in portions of Texas, Oklahoma, Arkansas, and the western Ohio Valley today into Monday. Snow will fall in the Colorado and southern Rockies onto the central Plains, with winter mixed precipitation also on portions of the southern and central High Plains, tonight into Sunday. Behind the cold front, dry and breezy conditions are expected to develop Tuesday into Thursday across portions of the Southeast, with locally elevated and critical fire weather conditions possible as much of the Southeast and Mid-Atlantic are likely to remain dry.
