Predictive Services Discussion:

Dry and breezy conditions will continue across parts of southeast California, the southern Great Basin, western Colorado, and northern portions of the Southwest leading to elevated and locally critical fire weather conditions. Hot, dry, and unstable conditions will continue across parts of the Desert Southwest and in the Pacific Northwest along a thermal trough mostly west of the Cascades. Isolated dry thunderstorms are possible in far northern California into southern Oregon, the north Cascades, and in parts of western Colorado. Severe thunderstorms are likely from the Front Range across the southern and central Plains into the Midwest and Southeast, with chances of isolated showers and thunderstorms in the central and southern Rockies, Texas, and Northeast. Below normal temperatures will develop across much of the northern Plains into the western Great Lakes behind the cold front. Western Alaska will remain cooler and wetter with warmer and drier conditions across the eastern half of the state, including the panhandle.
