

Incident Management Situation Report
Friday, February 9, 2024 – 0730 MDT
National Preparedness Level 1

National Fire Activity (February 2, 2024 – February 8, 2024):

Fire Activity and Teams Assigned	Totals
Initial attack activity:	Light (426 fires)
New large incidents:	4
Large fires contained:	2
Uncontained large fires: **	3
NIMOs committed:	0
Type 1 IMTs committed:	0
Complex IMTs committed:	0

Nationally, there are zero fires being managed under a strategy other than full suppression.

**Uncontained large fires include only fires being managed under a full suppression strategy.

Fire Activity and Teams Assigned

Totals

New fires: 397
 New large incidents: 4
 Uncontained large fires: 3

* **Bonnie Brae**, North Carolina Forest Service. Three miles northwest of Andrews, NC. Timber. Active fire behavior with running. Residences threatened.

* **Red Mud Creek**, Texas A&M Forest Service. Started on private land 5 miles southeast of Shamrock, TX. Grass and chaparral. Moderate fire behavior.

* **Arkoma**, Oklahoma DOF. Two miles east of Kansas, OK. Hardwood litter. Active fire behavior.

Ten Year Average	Quantity
Fires (2014 – 2023 as of today)	2,446
Acres (2014 – 2023 as of today)	45,713

Changes in some agency YTD acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

Widespread light precipitation is expected across the Intermountain West through tomorrow with snow levels 3,000 to 5,000 feet and below normal temperatures as a weakening upper trough moves into the Plains. An upper ridge will build in its wake Sunday into much of next week near the West Coast, but it will be weak and light precipitation will remain possible across the Northwest and northern Rockies early next week. The ridge will progress into the Rockies late next week, with another storm likely to impact the West Coast late next week as temperatures rise to near to above normal.

A slow-moving cold front will bring widespread wetting rain to much of the southern Plains this weekend, and to much of the Lower/Mid-Mississippi Valley, Appalachians, and East Coast early next week, with light snow possible across the northern fringes of the moisture. Little precipitation is forecast for much of the northern Plains, Upper Mississippi Valley, south and west Texas, and the Florida Peninsula the next week. Breezy west to northwest winds will develop across portions of west . A strong storm will move into southern Alaska today, with mixed, heavy precipitation along the coast, while light snow and gusty winds spread across portions of the Interior. Above normal temperatures are likely to continue into next week, with another storm for western Alaska early next week.
