Interagency Standards for Fire and Fire Aviation Operations

### February 2019 January 2020

NFES 2724

Produced by the Interagency Standards for Fire and Fire Aviation Operations Group, National Interagency Fire Center, Boise, ID.

This document is posted at https://www.nifc.gov/policies/pol_ref_redbook.html.

Release Date: January 2020
To: Agency Personnel

From: Fire and Aviation Directors
Bureau of Land Management
U.S. Forest Service
U.S. Fish and Wildlife Service
National Park Service
Bureau of Indian Affairs

Subject: Interagency Standards for Fire and Fire Aviation Operations

The Fire and Aviation Directors of the Bureau of Land Management, U.S. Forest Service, U.S. Fish and Wildlife Service, National Park Service, and Bureau of Indian Affairs have directed the Interagency Standards for Fire and Fire Aviation Operations Group (ISOG) to annually revise, publish, and distribute the federal Interagency Standards for Fire and Fire Aviation Operations, and issue errata to this document.

The Interagency Standards for Fire and Fire Aviation Operations, states, references, or supplements policy and provides program direction for Bureau of Land Management, U.S. Forest Service, U.S. Fish and Wildlife Service, National Park Service, and Bureau of Indian Affairs fire and fire aviation program management.

Employees engaged in fire suppression and fire management activities will comply with interagency and agency-specific health, safety, and fire management policy documents.

For the Bureau of Land Management, this document provides policy and guidance as referenced in BLM Manual Section (MS) 9200 Fire Program Management.

For the USDA Forest Service, this document provides guidance for implementing safe and effective fire and aviation management operations based on policy in Forest Service Manual 5100 and 5700.

For the U.S. Fish and Wildlife Service, this document provides guidance for implementation of 621 FW 1.

For the National Park Service, this document supplements Reference Manual 18.

Release Date: January 2020
For the Bureau of Indian Affairs, this document provides guidance policy on field level fire operations, in addition to policy referenced in the Indian Affairs Manual (IAM) Section 90.

This document addresses specific action items that are contained in the Guidance for Implementation of Federal Wildland Fire Management Policy (February 13, 2009).

The contents of this book are not to be modified. Supplemental agency-specific direction of a more restrictive nature may be issued separately.

Suggestions for modification of the publication should be sent to your agency representatives listed on this page.

### John F. Ruhs
Grant Beebe
Acting Assistant Director, Fire & Aviation, Bureau of Land Management

Elizabeth W. Lund
Assistant Director, Operations, Fire & Aviation Management, U.S. Forest Service

Chris Wilcox
Chief, Fire Management Branch, U.S. Fish and Wildlife Service

William Kaage
Chief, Division of Fire and Aviation Management, National Park Service

Leon W. Ben Jr.
Branch Chief, Wildland Fire Management, Bureau of Indian Affairs

Scope

The Interagency Standards for Fire and Fire Aviation Operations states, references, or supplements policy for Bureau of Land Management, U.S. Forest Service, U.S. Fish and Wildlife Service, National Park Service, and Bureau of Indian Affairs fire and fire aviation program management. Original source policy is stated or referenced throughout this handbook. This handbook attempts to quote verbatim, rather than to paraphrase policy that is stated elsewhere. It also attempts to limit duplication of source policy when a reference will suffice reference policy, rather than paraphrase policy to limit duplication. Interagency Standards for Fire and Fire Aviation Operations is intended to comply with and support the Review and Update of the 1995 Federal Wildland Fire Management Policy (January 2001) and the Guidance for Implementation of Federal Wildland Fire Management Policy (February 13, 2009) and other existing federal policy.

Purpose

The Interagency Standards for Fire and Fire Aviation Operations provides fire and fire aviation program management direction for Bureau of Land Management, U.S. Forest Service, U.S. Fish and Wildlife Service, National Park Service, and Bureau of Indian Affairs managers. Employees engaged in fire management activities will continue to comply with all agency-specific health and safety policies. Other references, such as the National Wildfire Coordinating Group (NWCG) Incident Response Pocket Guide (PMS 461, NFES 1077) and the NWCG Wildland Fire Incident Management Field Guide (PMS 210) provide operational guidance.

The Review and Update of the 1995 Federal Wildland Fire Management Policy (January 2001) is comprised of the following guiding principles and discrete policies. As a whole these principles and policy statements guide the philosophy, direction, and implementation of fire management planning, activities, and projects on federal lands. The Review and Update of the Federal Wildland Fire Management Policy (pp. 21-22) established the following Guiding Principles as fundamental to the successful implementation of the 2001 Federal Fire Policy. For reference, the full 2001 policy document is available at https://www.nifc.gov/PIO_bb/Policy/FederalWildlandFireManagementPolicy_2001.pdf.

Guiding Principles of the Federal Wildland Fire Management Policy

Release Date: January 2020
1. Firefighter and public safety is the first priority in every fire management activity.

2. The role of wildland fire as an essential ecological process and natural change agent will be incorporated into the planning process. Federal agency land and resource management plans set the objectives for the use and desired future condition of the various public lands.

4. Sound risk management is a foundation for all fire management activities. Risks and uncertainties relating to fire management activities must be understood, analyzed, communicated, and managed as they relate to the cost of either doing or not doing an activity. Net gains to the public benefit will be an important component of decisions.

5. Fire management programs and activities are economically viable, based upon values to be protected, costs, and land and resource management objectives. Federal agency administrators are adjusting and re-organizing programs to reduce costs and increase efficiencies. As part of this process, investments in fire management activities must be evaluated against other agency programs in order to effectively accomplish the overall mission, set short and long term priorities, and clarify management accountability.

6. FMPs and activities are based upon the best available science. Knowledge and experience are developed among all wildland fire management agencies. An active fire research program combined with interagency collaboration provides the means to make these tools available to all fire managers.

7. FMPs and activities incorporate firefighter exposure, public health, compliance with Clean Air Act and environment and environmental quality considerations.

8. Federal, state, tribal, local, interagency, and international coordination and cooperation are essential. Increasing costs and smaller work forces require that public agencies pool their human resources to successfully deal with the ever-increasing and more complex fire management tasks. Full collaboration among federal agencies and between the federal agencies, state, international, state, tribal, and local governments, and private entities results in a mobile fire management workforce available for the full range of public needs.

9. Standardization of policies and procedures among federal agencies is an ongoing objective. Consistency of plans and operations provides the fundamental platform upon which federal agencies can cooperate, integrate fire activities across agency boundaries, and provide leadership for cooperation with state, tribal, and local fire management organizations.

Elements of the Federal Wildland Fire Management Policy

The 2001 Review and Update of the Federal Wildland Fire Management Policy (pp. 23-25) established the following policies:

1. **Safety**
   Firefighter and public safety is the first priority. All FMPs and activities must reflect this commitment.

2. **Fire Management and Ecosystem Sustainability**
   The full range of fire management activities will be used to help achieve ecosystem sustainability, including interrelated ecological, economic, and social components.

3. **Response to Wildland Fire**
   Fire, as a critical natural process, will be integrated into land and resource management plans and activities on a landscape scale, across agency boundaries. Response to wildland fires is based on ecological, social, and legal consequences of the fire. The circumstances under which a fire occurs, and the likely consequences on firefighter and public safety and welfare, the natural and cultural resources, and the values to be protected dictate the appropriate management response to the fire.

4. **Use of Wildland Fire**
   Wildland fire will be used to protect, maintain, and enhance resources and, as nearly as possible, be allowed to function in its natural ecological role. Use of fire will be based on approved FMPs and will follow specific prescriptions contained in operational plans.

5. **Rehabilitation and Restoration**
   Rehabilitation and restoration efforts will be undertaken to protect and sustain ecosystems, public health, safety, and to help communities protect infrastructure.

6. **Protection Priorities**
   The protection of human life is the single, overriding suppression priority. Setting priorities among protecting public human communities and community infrastructure, other property and improvements, and natural and cultural resources will be done based on the values to be protected, public human health and safety, and the costs of protection. Once people have been committed to an incident, these human resources become the highest value to be protected.

7. **Wildland Urban Interface**
   The operational roles of the federal agencies as partners in the wildland urban interface are wildland firefighting, hazardous fuels reduction, cooperative prevention and education, and technical assistance. Structural fire suppression is the responsibility of tribal, state, or local governments. Federal agencies may assist with exterior structural fire protection activities under formal fire protection agreements that specify the mutual responsibilities of the partners, including funding. (Some federal agencies have full structural
protection authority for their facilities on lands they administer and may also enter into formal agreements to assist state and local governments with structural protection.)

8. **Planning**
   Every area with burnable vegetation must have an approved FMP. FMPs are strategic plans that define a program to manage wildland and prescribed fires based on the area’s approved land management plan (LMP). FMPs must provide for firefighter and public safety; include fire management strategies, tactics, and alternatives; address values to be protected, and public health issues; and be consistent with resource management objectives, activities of the area, and environmental laws and regulations.

9. **Science**
   FMPs and fire programs will be based on a foundation of the best available sound science. Research will support ongoing efforts to increase our scientific knowledge of biological, physical, and sociological factors. Information needed to support fire management will be developed through an integrated interagency fire science program. Scientific results must be made available to managers in a timely manner and must be used in the development of LMPs, FMPs, and implementation plans.

10. **Preparedness**
    Agencies will ensure their capability to provide safe, cost-effective fire management programs in support of land and resource management plans through appropriate planning, staffing, training, equipment, and management oversight.

11. **Suppression**
    Wildland fires are suppressed at minimum cost, considering firefighter and public safety, benefits and all values to be protected consistent with resource objectives.

12. **Prevention**
    Agencies will work together and with their partners and other affected groups and individuals to prevent unauthorized ignition of wildland fires.

13. **Standardization**
    Agencies will use compatible planning processes, funding mechanisms, training and qualification requirements, operational procedures, values-to-be protected methodologies, and public education programs for all fire management activities.

14. **Interagency Cooperation and Coordination**
    Fire management planning, preparedness, prevention, suppression, fire use, restoration and rehabilitation, monitoring, research, and education will be conducted on an interagency basis with the involvement of cooperators and partners.

15. **Communication and Education**
    Agencies will enhance knowledge and understanding of wildland fire management policies and practices through internal and external communication and education programs. These programs will be
continuously improved through the timely and effective exchange of information among all affected agencies and organizations.

16. **Agency Administrator and Employee Roles**

Agency administrators will ensure that their employees are trained, certified, and made available to participate in the wildland fire program locally, regionally, and nationally as the situation demands. Employees with operational, administrative, or other skills will support the wildland fire programs as necessary. Agency administrators are responsible and will be held accountable for making employees available.

17. **Evaluation**

Agencies will develop and implement a systematic method of evaluation to determine effectiveness of projects through implementation of the 2001 Federal Wildland Fire Management Policy. The evaluation will assure accountability, facilitate resolution of areas of conflict, and identify resource shortages and agency priorities.

---

### Guidance for Implementation of Federal Wildland Fire Management Policy (February 13, 2009)

On February 13, 2009, the Fire Executive Council (FEC) approved guidance for the implementation of federal wildland fire management policy. This guidance provides for consistent implementation of the Review and Update of the 1995 Federal Wildland Fire Management Policy (January 2001), as directed by the Wildland Fire Leadership Council:

For reference, the complete 2009 Guidance is available at https://www.nifc.gov/policies/policies_documents/GIFWFMP.pdf.

“The following guidelines should be used to provide consistent implementation of federal wildland fire policy:

1. Wildland fire management agencies will use common standards for all aspects of their fire management programs to facilitate effective collaboration among cooperating agencies.

2. Agencies and bureaus will review, update, and develop agreements that clarify the jurisdictional inter-relationships and define the roles and responsibilities among local, state, tribal, and federal fire protection entities.
CHAPTER 1 FEDERAL WILDLAND FIRE MANAGEMENT POLICY & DOCTRINE OVERVIEW

3. Responses to wildland fire will be coordinated across levels of government regardless of the jurisdiction at the ignition source.

4. FMPs will be intergovernmental in scope and developed on a landscape scale.

5. Wildland fire is a general term describing any non-structure fire that occurs in the wildland. Wildland fires are categorized into two distinct types:
   a. **Wildfires** — Unplanned ignitions or prescribed fires that are declared wildfires.
   b. **Prescribed Fires** — Planned ignitions.

6. A wildland fire may be concurrently managed for one or more objectives and objectives can change as the fire spreads across the landscape. Objectives are affected by changes in fuels, weather, topography; varying social understanding and tolerance; and involvement of other governmental jurisdictions having different missions and objectives.

7. Management response to a wildland fire on federal land is based on objectives established in the applicable Land/Resource Management Plan (L/RMP), and/or the Fire Management Plan.

8. Initial action on human-caused wildfire will be to suppress the fire at the lowest cost with the fewest negative consequences with respect to firefighter and public safety.

9. Managers will use a decision support process to guide and document wildfire management decisions. The process will provide situational assessment, analyze hazards and risk, define implementation actions, and document decisions and rationale for those decisions.”

(Guidance for Implementation of Federal Wildland Fire Management Policy (February 13, 2009), page 7.)

### Definitions

**Wildland Fire**
A general term describing any non-structure fire that occurs in the wildland.

**Fire Type**
Wildland fires are categorized into two distinct types:
- **Wildfires** — Unplanned ignitions or prescribed fires that are declared wildfires.
- **Prescribed fires** — Planned ignition.

**Wildfire Management Objectives**
A wildfire may be concurrently managed for one or more objectives as specified in the L/RMP and FMP. Objectives can change as the fire spreads across the landscape and are affected by changes in fuels, weather, and/or topography; varying social understanding and tolerance; and involvement of other governmental jurisdictions having different missions and objectives.
- **FS** — All wildfires will have a protection objective.
Response to Wildfire
Response to wildfire will be coordinated with all affected agencies/cooperators regardless of the jurisdiction at the ignition point.

Management response to a wildfire on federal land is based on objectives established in the applicable L/RMP and FMP. A wildfire may be concurrently managed for more than one objective. Unplanned natural ignitions may be managed to achieve L/RMP and FMP objectives when risk is within acceptable limits.

- **BLM**—Initial action on human-caused wildfires will be to suppress the fire in the most cost-effective manner with the fewest negative consequences with respect to firefighter and public safety. If the initial action is not successful, an updated decision will be made utilizing the fire management decision process, and will be documented as part of the official record. The updated decision will consider firefighter and public safety, values to be protected and costs.

- **NPS**—Refer to RM-18, Chapter 2 for further guidance.

- **FWS**—All escaped prescribed fires will be suppressed. When reporting in FMIS, the cause of the wildfire will be “Escaped RX” and the narrative will document the link between the prescribed fire and the wildfire.

- **FS**—Human-caused fires and trespass fires must be suppressed safely and cost effectively and must not be managed for resource benefits.

Response to wildfire is based on ecological, social, and legal consequences of the fire. The appropriate response to the fire is dictated by:

- The circumstances under which a fire occurs;
- The likely consequences to firefighter/public safety and welfare; and
- The natural/cultural resource values to be protected.

**Initial Response**
The initial decisions and actions taken in reaction to a reported incident.

**Initial Attack (IA)**
A preplanned response to a wildfire given the wildfire’s potential. Initial Attack may include size up, patrolling, monitoring, holding action or suppression.

**Extended Attack**
Actions taken on a wildfire that has exceeded the initial response.

**Extended Attack Incident**
An incident that exceeds the capability of the initial attack resources and/or organization to successfully manage the incident to conclusion.

**Suppression**
All the work of extinguishing a fire or confining fire spread.

**Protection**
The actions taken to mitigate the adverse effects of fire on environmental, social, political, and economical effects of fire.

Prescribed Fire
A wildland fire originating from a planned ignition to meet specific objectives identified in a written, approved, prescribed fire plan for which National Environmental Policy Act (NEPA) requirements (where applicable) have been met prior to ignition.

National Ambient Air Quality Standards (NAAQS)
Uniform air quality goals established by the EPA. The EPA designated two types of national air quality standards, primary which provides public health protection and secondary which provides public welfare protection.

Criteria Pollutants
Six common air pollutants: sulfur dioxide (SO2), nitrogen oxides (NOX), carbon monoxide (CO), particulate matter (PM10 & PM2.5), ground-level ozone (O3), and lead (Pb), designated by the EPA for which primary and secondary NAAQS have been established.

State Implementation Plan (SIP)
Section 110 of the Clean Air Act requires each state to adopt and submit to the EPA an implementation plan that provides for the implementation, maintenance, and enforcement of NAAQS in each Air Quality Control Region.

Federal Implementation Plan (FIP)
A federally-implemented plan used by the EPA to ensure air quality is maintained and enforced in accordance with established NAAQS. This plan is used when a state’s SIP is found unacceptable.

Attainment Area
A geographic area that meets the primary NAAQS established by the EPA.

Note: An area may meet the established NAAQS for one criteria pollutant, but have unacceptable levels for another. An area could be in attainment for one criteria pollutant and simultaneously in nonattainment for another.

Nonattainment Area
A geographic area that does not meet the primary NAAQS limits established by the EPA to protect public health and the environment.

Note: The EPA establishes time limits for nonattainment areas to achieve specified air quality goals and may further designate nonattainment areas as extreme, severe, serious, moderate, or marginal.

Maintenance Area
Geographic area previously designated nonattainment and subsequently redesignated to attainment, for a probationary period, due to achieving the NAAQS.

### Key Policy Definitions

**Initial Response**
The initial decisions and actions taken in reaction to a reported incident.

**Initial Attack (IA)**
An aggressive action to put the fire out by the first resources to arrive, consistent with firefighter and public safety and values to be protected.

**Prescribed Fire**
A wildland fire originating from a planned ignition in accordance with applicable laws, policies, and regulations to meet specific objectives. See also: Wildland Fire.

**Suppression**
All the work to extinguish a fire or limit wildland fire spread.

**Wildfire**
A wildland fire originating from an unplanned ignition, such as lightning, volcanos, unauthorized and accidental human caused fires and prescribed fires that are declared wildfires.

**Wildland Fire**
Any non-structure fire that occurs in vegetation or natural fuels. Includes Wildfires and Prescribed Fires.

### Other ### Key Definitions

**Extended Attack**
Actions taken on a wildfire that has exceeded the initial response.

**Extended Attack Incident**
An incident that exceeds the capability of the initial attack resources and/or organization to successfully manage the incident to conclusion.
Fire Operations Doctrine

Purpose of Fire Operations Doctrine
Fire operations doctrine states the fundamental principles on the subject of fire operations. This doctrine establishes a particular way of thinking about fire operations. It provides a philosophy for leading firefighters in fire operations, a mandate for professionalism, and a common language. Fire operations doctrine does not consist of procedures to be applied to specific situations so much as it sets forth general guidance that requires judgment in application.

The Nature of Fire Operations
Fire is a complex, dynamic, and often unpredictable phenomenon. Fire operations require mobilizing a complex organization that includes management, command, support, and firefighting personnel, as well as aircraft, vehicles, machinery, and communications equipment. While the magnitude and complexity of the fire itself and of the human response to it will vary, the fact that fire operations are inherently dangerous will never change. A firefighter, utilizing the best available science, equipment, training, and working within the scope of agency doctrine and policy can still suffer serious injury or death.

Wildland Fire Operations Risk Management
The primary means by which we prevent accidents in wildland fire operations is through aggressive risk management. Our safety philosophy acknowledges that while the ideal level of risk may be zero, a hazard-free work environment is not a reasonable or achievable goal in fire operations. Through organized, comprehensive, and systematic risk management, we will determine the acceptable level of risk that allows us to provide for safety yet still achieve fire operations objectives. Risk management is intended to minimize the number of injuries or fatalities experienced by wildland firefighters.

Fire Preparedness
Fire preparedness is the state of being ready to provide an appropriate response to wildland fires based on identified objectives. Preparedness is the result of activities that are planned and implemented prior to fire ignitions. Preparedness requires identifying necessary firefighting capabilities and implementing coordinated programs to develop those capabilities. Preparedness requires a continuous process of developing and maintaining firefighting infrastructure, predicting fire activity, implementing prevention activities, identifying values to be protected, hiring, training, equipping, pre-positioning, and deploying firefighters and equipment, evaluating performance, correcting deficiencies, and improving operations. All preparedness activities should be focused on developing fire operations capabilities and on performing successful fire operations.

Fire Operations Command Philosophy
It is essential that our philosophy of command support the way we conduct fire operations. First and foremost, in order to generate effective decision making in fire operations, and to cope with the unpredictable nature of fire, commanders’ intent must be lucid and unambiguous, and lines of authority must be clearly articulated and understood. Subordinate commanders must make decisions on their own initiative based on their understanding of their commander’s intent. A competent subordinate commander who is at the point of decision may understand a situation more clearly than a senior commander some distance removed. In this case, the subordinate commander must have the freedom to take decisive action directed toward the accomplishment of operational objectives. However, this does not imply that unity of effort does not exist, or that actions are not coordinated. Unity of effort requires coordination and cooperation among all forces toward a commonly understood objective. Unified, coordinated action, whether between adjacent single resources on the fireline or between the highest command level and the most subordinate firefighter, is critical to successful fire operations.

Fire Leadership
Leadership is the art of influencing people in order to achieve a result. The most essential element for success in the wildland fire service is good leadership. Good leaders provide purpose, direction, and motivation for wildland firefighters working to accomplish difficult tasks under dangerous, stressful circumstances. Leaders often face difficult problems to which there are no simple, clear-cut, by-the-book solutions. In these situations, leaders must use their knowledge, skill, experience, education, values, and judgment to make decisions and to take or direct action — in short, to provide leadership. All firefighters, regardless of position, must provide leadership.

Fire Suppression
### The purpose of fire suppression is to put the fire out in a safe, effective, and efficient manner. Fires are easier and less expensive to suppress when they are small. When the management goal is full suppression, aggressive initial attack is the single most important method to ensure the safety of firefighters and the public and to limit suppression costs. Aggressive initial attack provides the Incident Commander maximum flexibility in suppression operations. Successful initial attack relies on speed and appropriate force. All aspects of fire suppression benefit from this philosophy. Planning, organizing, and implementing fire suppression operations should always meet the objective of directly, quickly, and economically contributing to the suppression effort. Every firefighter, whether in a management, command, support, or direct suppression role, should be committed to maximizing the speed and efficiency with which the most capable firefighters can engage in suppression action. When the management goal is other than full suppression, or when conditions dictate a limited suppression response, decisiveness is still essential and an aggressive approach toward accomplishment of objectives is still critical. The purpose of fire suppression is to protect values at risk of loss by putting the fire out in the
Principles of Suppression Operations

The primary means by which we implement command decisions and maintain unity of action is through the use of common principles of suppression operations. These principles guide our fundamental fire suppression practices, behaviors, and customs, and are mutually understood at every level of command. They include Risk Management; Standard Firefighting Orders and Watch Out Situations; Lookouts, Communication, Escape Routes, Safety Zones (LCES); and the Downhill Line Construction Checklist. These principles are fundamental to how we perform fire suppression operations and are intended to improve decision making and firefighter safety. They are not absolute rules. They require judgment in application.

Principles of Fire Suppression Action

The principles of fire suppression action provide a framework for developing fire suppression strategy and for conducting fire suppression operations. Again, these are not absolute or immutable rules. These five principles provide a consistent set of considerations with which to evaluate decisions, plans, and actions in different situations.

1. Objective

The principle of the objective is to direct every fire suppression operation toward a clearly defined, decisive, and obtainable objective. The purpose of fire suppression operations is to achieve the suppression objectives that support the overall management goals for the fire. Objectives direct every fire suppression operation toward a clearly defined, attainable end state.

2. Speed and Focus

Speed is rapidity of action. Focus is the convergence of appropriate resources at the desired position to initiate action. The principle of speed and focus maintains that rapidly deploying and concentrating firefighting resources, in a calculated fashion at the decisive time and place, increases the likelihood of successful suppression actions. Speed is rapidity of action. Focus is the convergence of appropriate resources at the desired position to initiate action. Speed and focus results in increased likelihood of successful suppression actions.

3. Positioning

The principle of positioning maintains that rapid, flexible, and opportunistic movement increases the effectiveness of fire suppression resources. Positioning ranges from single resource offensive or defensive reactions to dynamic fire conditions, to pre-positioning of multiple resources based on predicted activity and values at risk. Positioning should
always be undertaken with speed and focus in mind and with sufficient time for positioning to occur before operations begin. Positioning of fire suppression resources ranges from single resource offensive or defensive reactions to changing fire conditions, to pre-positioning of multiple resources based on predicted activity and values at risk. Positioning should always be undertaken with speed and focus in mind and with sufficient time for positioning to occur before operations begin. Positioning using strategic and opportunistic movement increases the effectiveness of fire suppression resources.

4. **Simplicity**

#### The principle of simplicity is that clear, uncomplicated plans and concise orders maximize effectiveness and minimize confusion. Simplicity contributes to successful actions. Simplicity provides clear, uncomplicated plans and concise orders. Simplicity contributes to successful actions, maximizing effectiveness and minimizing confusion.

5. **Safety**

#### The principle of safety maintains that ensuring the safety of firefighters and other persons affected by fire operations Safety is fundamental to successful suppression action. Safety not only contributes to successful actions, it is indispensable to them.

### Cost-Effective Fire Operations

Maximizing the cost effectiveness of any fire operation is the responsibility of all involved, including those that authorize, direct, or implement those operations. Cost effectiveness is the most economical use of the suppression resources necessary to accomplish mission objectives. Accomplishing fire operations objectives safely and efficiently will not be sacrificed for the sole purpose of “cost savings.” Care will be taken to ensure that suppression expenditures are commensurate with values to be protected, while understanding that other factors may influence spending decisions, including the social, political, economic, and biophysical environments.
Chapter 2

BLM Wildland Fire and Aviation Program
Organization and Responsibilities

Introduction

This chapter provides policy and guidance for Bureau of Land Management fire and aviation program management as referenced in BLM Manual Section (MS) 9200 Fire Program Management. These standards are based on Department of Interior (DOI) and Bureau policy. They are intended to ensure safe, consistent, efficient, and effective fire and aviation operations for a fire organization to manage state and/or local unit fire workload or meet approved national program resource allocations. BLM employees engaged in fire management activities, including fire program management, fire suppression, and fire program/incident support, will adhere to the standards in this document. This chapter will be reviewed and updated annually.

Sexual Harassment, Harassment Non-Sexual and Illegal Discrimination

All fire personnel will be provided with a workplace free of unlawful harassment and discrimination. Discrimination based on race, color, national origin, religion, sex, age (over 40), disability, sexual orientation, genetic information, and reprisal is prohibited. Discrimination, in any form, has no place in our organization and will not be tolerated. Discrimination includes sexual or non-sexual harassment; any discriminatory act, policy, practice or procedure that denies equal opportunity; or any conduct that demean the dignity of another person.

All personnel have a responsibility to carry out this policy and create a work environment a reasonable person would not consider intimidating, hostile, or offensive.

Sexual harassment is a form of discrimination that involves unwelcome sexual advances, requests for sexual favors, and other verbal or physical conduct of a sexual nature.

Harassment that is not sexual in nature may also be a form of discrimination if it involves unwelcome verbal or physical conduct based on race, color, national origin, religion, sex, age (over 40), disability, sexual orientation, or genetic information. It is behavior that is hostile and/or intimidating, which creates an abusive or offensive work environment.

All allegations of harassment (sexual or non-sexual) will be taken seriously and dealt with fairly and promptly. It is critical that home unit human resources (HR) and Equal Employment Opportunity (EEO) offices be contacted when harassment of any kind occurs while on fire assignment.

Reprisal against an individual who reports harassment of any kind is illegal. Reprisal is the wrongful threatening or taking of either unfavorable action or
withholding favorable action from another solely in response for their opposing
employment discrimination or participating in an EEO activity protected by
employment discrimination statutes.

An employee who engages in harassment or discrimination faces consequences
ranging from verbal warnings and letters of reprimand, up to termination from
employment, depending on the seriousness of the misconduct. Managers and
supervisors who do not take action when they know or suspect that harassment
or discrimination is occurring also face discipline. Contractor staff may be
subject to comparable penalties from their employers. A contractor who fails to
enforce this policy may have its contract terminated. Visitors to fire camps who
engage in harassment may be removed and prevented from returning.

Fire leaders at all levels have the responsibility to serve as role models of
appropriate behavior, and should confront any form of discrimination,
harassment, or other improper behavior when it is observed, or reported.
Supervisors have a duty to act when they become aware of harassment of any
kind, and will be held accountable for responding, and stopping harassment
while on fire assignment.

All reports of alleged discrimination will be taken seriously, promptly
investigated and handled with professionalism, dignity, and fairness. Incident
personnel who believe they have been subjected to discrimination, harassment
or reprisal, should be directed to their home unit EEO Manager or an EEO
Counselor within 45 days of the alleged discriminatory matter.

### Department of Interior Personnel Bulletin No. 18-01, Prevention and
Elimination of Harassing Conduct, updates and amends the Department’s policy
on providing a work environment free from harassment
questions or concerns regarding harassment, sexual harassment or any form of
illegal discrimination should be directed to the home unit EEO manager or the
Fire and Aviation Directorate EEO Manager.

---

**Employee Conduct**

All employees, cooperators, contractors, and volunteers who participate in
wildland fire operations have the duty to treat each other with respect and to
maintain a work environment free of misconduct and harassment.

Misconduct includes but is not limited to alcohol misuse, driving while
intoxicated, the use of illegal drugs, hazing, insubordination, disregard for
policies and procedures, and the destruction or theft of government property.

**Examples of Misconduct**

- **Hazing** – Hazing is considered a form of harassment. *Hazing* is defined as
  “any action taken, or situation created intentionally, to produce mental or
  physical discomfort, embarrassment, or ridicule.”
• Alcohol – The use of alcohol during any work period is strictly prohibited. The performance of job duties while under the influence of alcohol is prohibited. Underage personnel alcohol use is prohibited at all times.

BLM Fire Operations Website

BLM Fire Operations maintains a website that hosts operational, informational, and policy-related documents. The website also contains information about the National Fire Equipment Program, the ### BLM Fire Training Unit National Fire Training and Workforce Development Program, and the BLM Fire Operations Group and its subcommittees. This website is referenced throughout this document. The address of the BLM Fire Operations website is http://web.blm.gov/internal/fire/fire_ops/index.html.

National Wildfire Coordinating Group (NWCG) Relationship to BLM

The National Wildfire Coordinating Group (NWCG) provides national leadership to enable interoperable wildland fire operations among federal, state, local, tribal, and territorial partners. The NWCG establishes national interagency wildland fire operations standards, but the decision to adopt the standards is made independently by the members and communicated through their respective directives systems. See Chapter 8 for NWCG members.

BLM provides a representative to the NWCG Executive Board and representatives to various NWCG committees and subcommittees. These individuals are responsible for representing the BLM during NWCG decision-making processes and ensuring that proposed NWCG standards are reviewed by pertinent BLM personnel prior to release by the NWCG.

Fire and Aviation Directorate

The BLM Fire and Aviation Directorate (FAD) consists of the Assistant Director (FA), one Deputy Assistant Director (FA) located at NIFC, and one Deputy Assistant Director (FA) located in Washington D.C., Fire Operations Division Chief, Aviation Division Chief, Fire Planning and Fuels Management Division Chief, Support Services Division Chief, Budget and Evaluation Chief, External Affairs Division Chief, ### and the Equal Employment Opportunity Manager, ### and Fire Safety Program Manager.

Program Manager Responsibilities

Assistant Director, Fire and Aviation (FA-100)

Deputy Assistant Directors, Fire and Aviation (FA-100)

• Develops policies and standards for firefighting safety, training, prevention, suppression, and use of wildland fires on Bureau lands.
• Provides guidance to State Directors on the use of prescribed fire and fuels management to achieve management objectives.
• Integrates fire and aviation management programs with natural resource management programs.
• Establishes position competencies, standards, and minimum qualifications for fire management officers, fire management specialists, and leaders based on federal interagency standards.
• Reviews and evaluates state fire and aviation management programs.
• Represents the BLM in the coordination of overall fire and aviation management activities at the National Interagency Fire Center (NIFC) on intra- and interagency fire committees, groups, and working teams.
• In conjunction with federal fire directors, establishes priorities for assignment of critical resources during wildfire emergencies.
• Initiates or participates on boards of review concerning actions taken on selected wildland fires.
• Negotiates cooperative agreements and/or modifications of existing national level agreements to improve fire and aviation management activities on Bureau lands.
• Makes determinations on wildland fire management program funding to states, and recommends approval to the BLM Director.
• Serves as the Bureau’s focal point for the Significant Wildland Fire Review (SWFR) process and initiates, facilitates, and provides oversight for the SWFR process. The assistant director (AD) coordinates with the appropriate State Director, assembles a SWFR team, provides a delegation of authority, initiates the SWFR, and provides briefings to the Bureau Director, as appropriate.
• Serves as designated contact for the United States Department of the Treasury for the certification and revocation of Certifying Officers and Assistant Disbursing Officers (CO/ADO) and designated officials for emergency incident payments.

### Supervises the Safety and Occupational Health Specialist who develops and implements safety programs, accident investigation procedures, and safety trend analyses.

### Supervises the National Critical Incident Response Program Manager.

**Equal Employment Opportunity (EEO) Manager (FA-120)**
• Manages the Equal Employment Opportunity (EEO) program in accordance with legal, regulatory, and policy requirements.
• Manages and directs the counseling program, and alternative dispute resolution (ADR) programs in accordance with Equal Employment Opportunity Commission (EEOC) regulations and BLM policy as well as for other agencies located at NIFC.
• Advises managers and aggrieved persons of employee rights and responsibilities, procedural options and timeframes in conflict situations and formulates proposed resolutions.
Negotiates with managers, aggrieved persons and their representatives to informally resolve EEO matters, and executes final settlement agreements.

Manages the Affirmative Employment Program (AEP).

Develops and maintains the accessibility program for the disabled, required under Section 504 of the Rehabilitation Act of 1973, as amended, and the Americans with Disability Act (ADA) of 1990.

Conducts analyses to evaluate progress in meeting equal employment opportunity program goals.

Administers training activities for the organization.

Provides managers and supervisors with guidance and advice on issues related to EEO/civil rights program activities.

Represents the organization in meetings with public and private groups, universities, minority and women’s organizations, other DOI components, and other federal agencies.

Support Services Division Chief (FA-200)

Manages all aspects of the business responsibilities and programs under the jurisdiction of NIFC for the benefit of the BLM and cooperating agencies.

Directs the accomplishment of the approved operating budget, exercising appropriate control to assure program quality goals are met according to established standards.

Interprets Departmental and Bureau policies and directives as they affect BLM-NIFC programs.

Participates in the BLM-wide and interagency task force activities as a leader or member.

Responsible for the NIFC site and facilities management, NIFC Safety and Health program, business practices, human resources, information resource management, maintenance and security, national radio cache, remote automated weather stations (RAWS) program, and transportation.

Is a focal point and frequent spokesperson for the Bureau and the national-level management, assures a public awareness of Bureau programs and coordinates with key officials in affected federal agencies, states, and occasionally with other entities, such as, foreign governments, private individuals, private organizations, vendors, suppliers, transportation groups, airlines, and others.

Supports the implementation of the BLM’s automation/modernization/information resource management (IRM) initiatives as they apply to BLM-NIFC.

Supervises the Fire Safety Program Manager who develops and implements safety programs, accident investigation procedures, and safety trend analyses.

Supervises the National Critical Incident Response Program Manager.

Fire Operations Division Chief (FA-300)
• Serves as the principal technical expert on fire operations to the Assistant Director (FA), Deputy Assistant Directors (FA), and to the BLM state fire programs.

• Provides the Assistant Director (FA) and the Deputy Assistant Directors (FA) technical advice, operational oversight, and leadership in all aspects of fire operations.

• Performs annual fire program preparedness reviews. Evaluates compliance with policies, objectives, and standards. Assesses operational readiness and provides technical assistance to solve identified problems. Performs other operations reviews as required/requested.

• Assists the Assistant Director (FA) and Deputy Assistant Directors (FA), in the formulation and establishment of national policies and programs pertinent to wildland fire preparedness, suppression, shared national resources, safety, training, fire facilities, and equipment.

• Serves as the BLM technical expert on national interagency mobilization and utilization of fire suppression resources.

• Develops national plans, standards, and technical guides for the BLM and interagency fire management operations.

• Supervises the Chief, Branch of Preparedness and Suppression Operations (FA-320), responsible for management and oversight of FA-320 staff specialists, the Great Basin Smokejumpers (FA-321), the National Fire Equipment Program (FA-322), and the National Fire Training and Workforce Development Program (FA-324).

• Supervises the Chief, Branch of Preparedness and Suppression Support (FA-330), responsible for management and oversight of the FA Veteran Affairs program, the FA Cooperator Assistance program, the National Predictive Services Program Manager, the National Interagency Coordination Center (FA-331), the National Radio Operations Section (FA-332), and the Incident Communications Section (FA-333).

• Serves as the BLM representative to the National Multi-Agency Coordinating (NMAC) Group (may be delegated to Branch Chief).

• Certifies Area Command and Type 1 Command and General Staff position task books and red cards for the national and Washington offices.

• Provides daily NMAC Group briefings to the Assistant Director and Deputy Assistant Directors, Fire and Aviation; and BLM state fire management officers at national preparedness level (PL) 3 and above as warranted.

Budget and Evaluation Division Chief (FA-400)

• Serves as principal budget advisor of the wildland fire program to the Assistant Director (FA), Deputy Assistant Directors (FA), BLM Fire Leadership Team (FLT), and to other BLM staffs.

• Serves as primary BLM representative in the DOI wildland fire budget formulation and execution process.
CHAPTER 2  BLM PROGRAM ORGANIZATION AND RESPONSIBILITIES

• Represents BLM on the DOI Fire Budget Team and at other interagency meetings in regards to budget related policies, requirements, procedures, and reports.
• Coordinates all budget activities between Washington Office, Office of Wildland Fire, and Fire and Aviation.
• Provides national oversight for BLM wildland fire program budget formulation, justification, and execution. Responsible for the development and preparation of the budget justifications, Planning Target Allocation, Annual Work Plan, capability statements, effects statements, and congressional responses.
• Reviews NIFC offices at mid-year, third quarter, and end-of-year and distributes available funding in accordance with BLM policy.
• Provides oversight of Casual Payment Center. Ensures all DOI casual payments are processed in a timely and cost-effective manner adhering to procedures and practices set forth by the DOI agencies.

Aviation Division Chief (FA-500)
• Serves as principal aviation advisor to the Assistant Director (FA), Deputy Assistant Director (FA), other staffs, states, and to the DOI.
• Identifies and develops Bureau aviation policies, methods and procedures, as well as standardized technical specifications for a variety of specialized firefighting missions for incorporation into the directives system.
• Coordinates aviation-related activities and services between the Washington Office (WO) and states with other wildland firefighting, regulatory, investigative, and military agencies.
• Coordinates provision and use of aviation resources with business practices, aviation user staffs at the WO, and state office level.
• Represents the BLM at interagency meetings, in interagency committees developing government-wide aviation policies, requirements, procedures and reports, at aviation industry meetings and conventions.
• Develops and implements aviation safety programs, accident investigation procedures, and aviation safety trend analyses.
• Plans and conducts reviews and evaluations of state aviation programs.
• Plans and conducts technical and managerial analyses relating to the identification of aviation organization and resources appropriate for agency use, cost-effectiveness of aviation firefighting, other specialized missions, aircraft acquisition requirements, equipment developmental needs, and related areas.

Fire Planning and Fuels Management Division Chief (FA-600)
Serves as principal advisor to the Assistant Director (FA), Deputy Assistant Directors (FA), Fire Leadership Team FLT, and other BLM staffs for the following wildland fire programs:
• Fire Planning – Responsible for the development and implementation of the Bureau-wide fire planning program and policies. Provides guidance and
assistance in administering the technical and operational aspects of BLM’s fire planning program.

- **Fuels Management** – Responsible for the development and coordination of the BLM’s fuels management program to restore and maintain healthy, resilient landscapes, reducing wildfire risks to communities and other values. Recommends the distribution of program funds to regions and tracks all fuels management fund distributions and prior year carryover funds. Develops and maintains a national database for fuels management accomplishments.

- **Community Assistance** – Responsible for the development and coordination of the BLM’s community assistance program which includes fire prevention, education, mitigation efforts on adjacent non-federal lands and cooperator assistance.

- **Fire Investigation and Trespass** – Responsible for the development and coordination of the BLM’s fire investigation and trespass programs.

- **Smoke Management** – Responsible for the development and coordination of the BLM’s smoke management program requirements and compliance with State air quality rules and State Implementation Plans.

**External Affairs Division Chief (FA-700)**

- Responsible for coordination of information between the Department of the Interior and Office of Wildland Fire to the BLM, BIA, USFWS, NPS, USFS, National Association State Foresters (NASF), and Federal Emergency Management Agency (FEMA) at NIFC.

- Responsible for coordination of the responses to: Office of Management and Budget (OMB), Government Accountability Office (GAO), congressional, other elected officials, and other external inquiries among agencies and departments, establishing and maintaining cooperative relationships resulting in quality work products.

- Serves as the primary manager of the External Affairs program for the NIFC.

- Serves as the primary point of contact to external audiences regarding BLM, and at times, DOI fire and aviation policy.

- Serves as the primary point of contact with the BLM Washington Office and DOI external affairs and communication offices.

- Develops recommendations pertaining to External Affairs aspects for BLM Fire and Aviation policies.

- Initiates External Affairs policies and procedures pertaining to Fire and Aviation for adoption at the department level in conjunction with other departments and agencies.

- Serves as personal and direct representative of the Assistant Director, Fire and Aviation at various meetings and functions with members of congress and staff, state governors and legislatures, officials of local, state and federal agencies, major private corporations, public and private interest groups, and foreign governments.
• Serves as external affairs expert and consultant to the Assistant Director, (FA) and the Deputy Assistant Director (FA) on a wide variety of issues and policies of controversial nature, providing analysis and advice on public reaction to major policy and program issues.
• Responsible for management and contact of all NIFC and BLM FA public expressions, including printed material, video productions, and social media products.
• Coordinates with BLM legislative affairs on proposed legislation regarding FA.

State Director (SD)
The SD is responsible for fire and aviation management programs and activities within the state. The SD will ensure that employees in their organization meet the requirements outlined in the Interagency Fire Program Management Qualifications Standards and Guide at https://www.ifpm.nifc.gov/ and will ensure training is completed to support delegations to line.

District Manager (DM)
The DM is responsible to the SD for the safe and efficient implementation of fire and aviation management activities within their district. This includes cooperative activities with other agencies or landowners.

Agency Administrator (AA)
An AA is a BLM line manager (District Manager, Field Manager, or National Conservation Lands Manager) or their designated Acting that has met specific training requirements (as outlined in Instruction Memorandum No. FA IM-2018-003) and has wildland fire decision authority for a defined area, as specified by delegation. All re-delegations must be consistent with BLM Manual 1203 and State supplements to that manual.

A BLM line manager must complete required AA training no later than two years after being appointed to a designated management position. Training that took place prior to a management appointment also meets the requirement.

State Fire Management Officer (SFMO)
The SFMO provides leadership for the BLM fire and aviation management program. The SFMO is responsible and accountable for providing planning, coordination, training, technical guidance, and oversight to the state fire and aviation management programs. The SFMO also represents the SD on interagency geographic area coordination groups and Multi-Agency Coordination (MAC) groups. The SFMO provides feedback to District offices on performance requirements. The SFMO meets the SFMO Assigned Program Responsibilities.

District Fire Management Officer (DFMO)
The DFMO is responsible and accountable for providing leadership for fire and aviation management programs at the local level. The DFMO:
• Determines local fire program requirements to implement land use decisions through the Fire Management Plan (FMP) to meet land management objectives;
• Negotiates interagency agreements and represents the District Manager on local interagency fire and fire aviation working groups;
• Meets the DFMO Assigned Program Responsibilities; and
• Fulfills FMO Safety and Health Responsibilities for the Fire Program.

Experience requirements for positions in the Alaska Fire Service, Oregon and California (O&C) Districts, FA, national office, and other fire management positions in units and state/regional offices will be established as vacancies occur, but will be commensurate with the position’s scope of responsibilities. The developmental training to fully achieve competencies should be addressed in an IDP within a defined time period.

### Selective factors for all BLM District Assistant Fire Management Officer (DAFMO) positions shall mirror those of the DFMO in the district in which the position is being flown.

○ High Complexity Districts – NWCG qualifications must be in either Pathway 1 or 2, currency not required.
  • Pathway 1 – DIVS and ICT3 or RXB2
  • Pathway 2 – ASGS and ICT3
  • Completion of M-581, *Fire Program Management – an Overview*, will be a condition of employment, to be completed within one year of official hiring date.

○ Moderate Complexity Districts – NWCG qualifications must be in either Pathway 1 or 2, currency not required.
  • Pathway 1 – TFLD and ICT3 or RXB2
  • Pathway 2 – HEBM and ICT3
  • Completion of M-581, *Fire Program Management – an Overview*, will be a condition of employment, to be completed within one year of official hiring date.

### Management Performance Requirements for Fire Operations

State Directors and District Managers have both authority and responsibility within the wildland fire management program. The *BLM Manual* Section (MS)-1203 Delegation of Authority provides a single authoritative source of the organizational location of authority. The MS-1203 defines authority as the ability to make the final, binding decision or to take specific action, or both as an official representing the United States Government. Such authorities have a legal basis in statute or regulation. Authority to make a decision or take an action is different from having responsibility.

Following are tables that show many of the authorities as well as the assigned responsibilities for the wildland fire management program. In addition to the national level MS-1203, each state may have a supplemental manual that is
consistent with the MS-1203. BLM offices should ensure adherence to the MS-1203 as well as the relevant state supplemental manual.

</table>
Requirements for fire management positions are outlined in the Interagency Fire Program Management Qualifications Standards and Guide (IFPM Standard). The supplemental Qualification Standard for professional GS-0401 Fire Management Specialist positions, approved by the Office of Personnel Management, is also included in the IFPM Standard. The Interagency Fire Program Management Qualifications Standards and Guide can be found in its entirety on the IFPM website at https://www.ifpm.nifc.gov.

Delegation of Authority

Delegation for State Fire Management Officers (SFMO)
In order to effectively perform their duties, a SFMO must have certain authorities delegated from the State Director. This delegation is normally issued annually following re-delegation direction in the MS 1203. The Delegation of Authority should include what Authorities found in the Management Performance Requirements for Fire Operations table above are being re-delegated. The Delegation of Authority may also include items from the Assigned Program Responsibilities section of the Management Performance table, however there should be a clear delineation between Authority being delegated and assignment of responsibility. Appendix C provides a sample “Delegation of Authority.”

Delegation for District Fire Management Officers (DFMO)
In order to effectively perform their duties, a DFMO must have certain authorities delegated from the District Manager. This delegation is normally issued annually following re-delegation direction in the MS 1203. The Delegation of Authority should include what Authorities found in the Management Performance Requirements for Fire Operations table above are being re-delegated. The Delegation of Authority may also include items from the Assigned Program Responsibilities section of the Management Performance table, however there should be a clear delineation between Authority being delegated and assignment of responsibility. Appendix C provides a sample “Delegation of Authority.”

Preparedness Reviews
The Review and Update of the 1995 Federal Wildland Fire Management Policy (January 2001) states that, “Agencies will ensure their capability to provide safe, cost-effective fire management programs in support of land and resource management plans through appropriate planning, staffing, training, equipment, and management oversight.” The Assistant Director, Fire and Aviation,
accomplishes this in part through the fire preparedness review process. Fire preparedness reviews assess fire programs for compliance with established fire policies and procedures as outlined in the current *Interagency Standards for Fire and Fire Aviation Operations* and other pertinent policy documents. Reviews identify organizational, operational, procedural, personnel, or equipment deficiencies, and recommend specific corrective actions.

**BLM Review Schedules**
- BLM Districts conduct fire preparedness reviews annually.
- BLM State Offices conduct state-wide fire preparedness reviews every two years.
- The BLM National Office conducts national fire preparedness reviews of each BLM state fire program every four years.

**BLM Operational Duty Officer (ODO)**
Each BLM unit Fire Management Officer will perform the duties of an ODO or will provide a delegated ODO for their units during any period of predicted incident activities. ODO responsibilities may be performed by any individual with a signed Delegation of Authority from the local Agency Administrator. Qualifications for the ODO will be identified within the Unit Annual Operating Plan. The required duties for all BLM ODOs are:
- Monitor unit incident activities for compliance with BLM safety policies.
- Coordinate and set priorities for unit suppression actions and resource allocation.
- Keep unit Agency Administrators, suppression resources, and information officers informed of the current and expected situation.
- Plan for and implement actions required for future needs.
- Document all decisions and actions.

ODOs will provide operational oversight of these requirements as well as any unit specific duties assigned by the local fire managers through the local unit fire operating plan. ODOs will not fill any ICS incident command functions connected to any incident. In the event that the ODO is required to accept an incident assignment, the FMO will ensure that another qualified and authorized ODO is in place prior to the departure of the outgoing ODO.

**State and National Duty Officers**
Each state will maintain a state-level duty officer during fire season and dedicated telephone number. State duty officers are responsible for:
- Establishing a process to identify available assets or needs within their state;
- Communicating availability of or need for assets to other state duty officers;
- Maintaining information on the Asset Intelligence Spreadsheet;
- Approving asset assignments;
• Facilitating movement of assets using established dispatch/coordination system protocols; and
• Ensuring emergency notifications are made to the National Duty Officer.

FA-320 will maintain a national duty officer and dedicated telephone number. The national duty officer is responsible for:
• Monitoring and supporting the Asset Intelligence Spreadsheet;
• Providing coordination and prioritization of prepositioned assets between states if the need arises;
• Resolving disagreements of asset priorities and/or mobilizations by elevating issues to the Division Chief, Fire Operations (FA DC) or delegate;
• Facilitating movement of assets using established dispatch/coordination system protocols;
• Providing briefings and updates to the FA DC/BLM NMAC representative as requested; and
• Ensuring emergency notifications are made according to FA protocols.

All state and national duty officer telephone numbers are listed on the Asset Intelligence Spreadsheet.

Incident Business

BLM Fire Management Position Titles and Fire Department Cooperator Equivalencies

Bureau of Land Management units that choose to use fire department cooperator nomenclature will utilize the following BLM position title equivalency standard.

Agreements with Cooperators (Rangeland Fire Protection Association (RFPA) and Local Fire Department)

The BLM should have a cooperative fire response agreement with any RFPA and local fire department (i.e., rural, volunteer and city) that responds to wildfire incidents on lands under BLM protection. These cooperative fire response agreements can be directly with individual BLM units or administered through a statewide cooperative agreement where BLM is a party. When entering into cooperative fire response agreements, BLM will ensure the following minimum required elements are included in the agreement.

- RFPA/local fire department personnel responding to incidents on BLM lands must:
  - Be 18 years of age or older;
  - Have and use the required personal protective equipment (PPE) found in Chapter 7; and
  - Have a basic level of wildland fire training, identified as the National Wildfire Coordinating Group (NWCG) course S-190 and S-130, which can be modified to fit local needs. I-100 is not required, but ICS must be thoroughly covered within the applicable section of S-190 and S-130 (RFPA requirement); or
  - Have a basic level of wildland fire training. The National Wildfire Coordinating Group (NWCG) course S-190 and S-130 are recommended, both courses can be modified to fit local needs (local fire department requirement).
• Pre-identified incident communication protocols will be established and followed (e.g., frequencies plans, points of contact, and interoperable radio hardware).

• The Incident Command System (ICS) will be used to manage all incidents.

Safety and Occupational Health Program

Safety and occupational health program responsibilities are interwoven throughout Bureau program areas, including fire management. Safety of our employees lies within every level of the organization and program implementation can have a direct impact on firefighting personnel. To ensure that program requirements are met to support the fire and aviation management program, the following checklist shall be utilized.

Safety and Health Responsibilities for the Fire Program

<table>

Employee Safety and Health Program Responsibility

All employees have personal responsibility to ensure safe and healthful work practices and the following elements specifically outline these responsibilities:

- Complying with applicable work rules, practices, and procedures.
- Using safety devices, personal protective equipment, clothing, and other means provided or directed by recognized authority at all times when necessary for their protection.
- Reporting unsafe and unhealthful working conditions to management.
- Reporting every job-related accident/incident to their supervisor that results in, or has the potential to harm people, property, or the environment.
- Reporting personal conditions that could adversely affect their ability to perform in a safe and healthful manner on the job.
- Completing the BLM Fire and Aviation Employee Orientation Checklist, available on the BLM Fire Operations website.
Emergency Notification and Contact Information

After emergency response actions deliver an injured employee to the immediate medical care facility, prompt notification through the chain of command is essential to ensure proper management support to the employee. For fire operations, notification criteria are as follows:

Injury on a BLM Fire
The responsible unit Fire Management Officer (FMO)/Operational Duty Officer will notify their State Duty Officer (or Fire Operations Group (FOG) representative) immediately. The State Duty Officer (or FOG representative) will then ensure the appropriate local agency GACC operational representative is notified.

BLM Employee Injury
Injured employee’s home unit FMO is notified. The FMO will then notify their State Duty Officer (or FOG representative) immediately. If the employee injury occurs in another state, the State Duty Officer (or FOG representative) will ensure that the hosting State Duty Officer (or FOG representative) is notified of the injury.

Great Basin Smokejumpers

From the Scene
- The accident is reported to the smokejumper spotter, Great Basin Smokejumper Liaison Officer (LO), and local dispatch.
- When the accident involves a jump injury, the spotter and/or ground contact will convey the medical needs and nature of the injury to the local dispatch.
- If cellular phone or satellite phone coverage is available, a ground contact will call the Great Basin Smokejumper LO or DO with details about the accident.

From the Great Basin Smokejumper Duty Officer
- The Great Basin Smokejumper Duty Officer will notify the base manager.
- The smokejumper base manager will notify the Chief, Branch of Preparedness and Suppression Operations (FA-320).
- The Chief, Branch of Preparedness and Suppression Operations (FA-320) will inform necessary parties up the chain of command and notify the NIFC External Affairs Office.
- The Great Basin Smokejumper Duty Officer or Base Manager will notify the BLM State Duty Officer (or FOG Representative).
- The Great Basin Smokejumper Duty Officer will confirm an agency representative will accompany the injured party to the hospital.
CHAPTER 2 BLM PROGRAM ORGANIZATION AND RESPONSIBILITIES

From the BLM Great Basin Smokejumper Base Manager

- The smokejumper base manager will contact their base manager counterpart if a visiting jumper is injured.
- The smokejumper base manager will notify the emergency contact of the injured smokejumper if the injured smokejumper is unable to do so.

All fire and aviation employees are required to review and update their emergency contact information annually, either in Employee Express or in hard copy format. This information will only be used for emergency purposes and only by those authorized to make contact with the employee and/or their personal contact(s) and will be maintained in accordance with the provisions of the Privacy Act of 1974.

Employee Advocacy

Fire operations doctrine acknowledges the inherent danger of fire operations and the potential for serious injury or death to firefighters. When these occur, it is important that Bureau employees are provided the best and most appropriate care and support possible. Managers should consult their human resources experts to ensure that applicable Departmental and Bureau human resources policies and guidelines are followed. In addition, the Bureau of Land Management Line of Duty Death (LODD) Response Guide Loss of Human Life Handbook (LOHL) (https://web.blm.gov/internal/fire/fire_ops/index.html) provides information to assist managers in dealing with the many complexities of these occurrences.

The LODD Response Guide is available in the Toolbox section of the BLM Fire Operations Website.

BLM Fire and Aviation Honor Guard

The BLM Fire and Aviation Honor Guard represents the highest ideals of honor, dignity, professionalism and respect in serving the agency, the fire community, and the families, friends and co-workers of those who have lost their lives in the line of duty.

The Honor Guard was established to appropriately pay tribute to and honor the memory of employees who perish in the line of duty. The Honor Guard also responds to requests for their participation at events of state and national significance.

The Honor Guard is comprised of a cross-section of the BLM workforce from within the fire and aviation program. A commitment to the program directly impacts fellow members and the ability of the team to function at the highest level possible. Members will be expected to commit for no less than a two-year period, and may remain an Honor Guard member until they can no longer fulfill the commitment or wish to retire from the Honor Guard. Members must stay in
Introduction
The following section represents a general overview of the BLM Mobile Fire Equipment Policy. The policy can be found in its entirety at the BLM National Fire Equipment Program (NFEP) Website, located within the BLM Fire Operations website, https://web.blm.gov/internal/fire/fire_ops/index.html, under the NFEP tab.

Policy and Guidance
The BLM fire equipment program is responsible for the design, development, and acquisition of specialized wildland fire equipment to meet the full range of fire management requirements. The design and development is accomplished through the analysis of performance needs required by BLM field units and working with industry to produce prototypes for testing and eventually production units. Acquisition of equipment is accomplished primarily through contracting. The BLM fire equipment program balances advanced technology with overall cost efficiency to provide maximum safety for personnel while effectively meeting fire management needs.

It is agency policy to maintain each piece of fire equipment at a high level of performance and in a condition consistent with the work it has been designed to perform. This shall be accomplished through application of a uniform preventive maintenance program, timely repair of damaged components while on assignment, and in accordance with all agency fiscal requirements.

Repairs shall be made as they are identified to keep the equipment functional and in peak operating condition.

Fire Equipment Committees
There are three levels of fire equipment committees: National, State, and Interagency. Fire equipment committees address the broad spectrum of equipment subjects and make recommendations. State committees will report to the respective State Fire Management Officer. The BLM Fire Equipment Group, BL M Dozer/Heavy Equipment Committee, and the BLM Engine Committee report to the Fire Operations Group (FOG). The Fire Equipment Group, Dozer/Heavy Equipment, Engine, Helitack and Hotshot committees report to the Fire Operations Group (FOG). Equipment committees should invite other agency equipment leads to share ideas, transfer technology, and coordinate efforts.

BLM National Fire Equipment Program (NFEP)
CHAPTER 2  BLM PROGRAM ORGANIZATION AND RESPONSIBILITIES

The BLM National Fire Equipment Program (NFEP) is located at NIFC. This unit is the sole entity responsible for design, ordering, procurement, and delivery of Working Capital Fund (WCF) 600 series fire equipment that will meet or exceed the minimum performance standards established by the BLM Fire Equipment Group and the BLM Engine Committee Fire Equipment Group, Engine, Helitack and Hotshot committees. The NFEP website is located within the BLM Fire Operations website. Information can be found on the BLM Fire Operations website under the NFEP tab.

### BLM Fire Equipment Status Report (FES)

Each state will submit an FES report to the NFEP annually by April 15. The FES is required to gather baseline data including the license number, type, make/model and location on mobile asset types (i.e., engines, off-highway vehicles and support vehicles). The Division of Fire Operations will issue an annual reminder notification to the Fire Operations Group (FOG) requesting this information. The FES is available at the NFEP section of the BLM Fire Operations website.

### BLM Engine Use Report (EUR)

All BLM engines will utilize the Engine Use Report. The EUR should be printed and completed daily as part of the Fire Equipment Maintenance and Procedure Record (FEMPR) and entered into the BLM EUR Share Point on a monthly basis. Access will be granted by the respective state Fire Operations Group (FOG) representative. The EUR is available at the Engine section of the BLM Fire Operations website.

### Equipment Development

The BLM NFEP has established a fire equipment development process to ensure that new fire equipment or technologies meet or exceed established performance standards. All new fire equipment will follow this development process and will be tested and evaluated under actual field conditions prior to being made available for general ordering.

### Fire Equipment Standardization

Standardization of fire equipment aids in the ability to produce equipment that effectively meets the Bureau’s mission by providing cost effective equipment with the least impact on fire programs. Standardization also contributes to the ability to provide effective, consistent, and quality training to the BLM fire program workforce. The BLM Fire Equipment Group and the BLM Engine Committee have the responsibility to establish and approve minimum performance standards for all BLM-specific fire equipment. Respective committees have the responsibility to establish minimum performance standards and acquire FOG approval for all BLM-specific WCF 600-class fire equipment.

### Fire and Command Vehicle Equipment Identifier Standards

Release Date: January 2020
Fire engine and command vehicle equipment identifier standards have been established by the FOG and can be found at https://web.blm.gov/internal/fire/fire_ops/nfep_policy.htm. All fire vehicles equipment have identifier standards and shall be equipped with identifier standards established by the FOG. Information can be found on the BLM Fire Operations website under the NFEP tab.

### Improvement and Deficiency Reporting

The BLM Fire Equipment Improvement and Deficiency Reporting System is used to collect improvement recommendations and deficiency reports for all BLM fire equipment. The reporting system enables the BLM NFEP to build a comprehensive database to document problems, identify trends, and establish priorities for development and modification of new and existing equipment. District/Field Offices are required to submit timely and detailed deficiency reports for problems encountered with BLM fire equipment. Reports will also be submitted for suggestions for improvement. Submitted reports will receive immediate attention. The NFEP will immediately verify receipt of the deficiency report and will follow-up with the submitting District/Field Office to correct the deficiency or work to incorporate the improvement suggestion. The Improvement and Deficiency Reporting System can be found on the BLM National Fire Equipment Program website, located within the BLM Fire Operations website on the BLM Fire Operations website under the NFEP tab.

### Equipment Modification/Retrofitting

Modification proposals must be submitted through the Improvement and Deficiency reporting system or applicable FOG subcommittee for consideration and approved through the NFEP. Unauthorized modifications and retrofits have the potential to negatively impact equipment quality and safety and void manufacturer warranties. In such cases, the financial burden of corrective action will be borne by the home state/unit preparedness funding.

### Acquisition of Working Capital Fund Equipment

All WCF 600-series equipment must be ordered through the NFEP using the Fire Equipment Ordering System (FEOS). The National Operations Center (NOC) located in Denver manages the Working Capital Fund (WCF). Each class of vehicle has an established replacement cycle based on miles or hours, vehicle replacement costs, and residual value. The WCF acquires funds through Fixed Ownership and Use Rates determined by the replacement cycle. At the end of the replacement cycle, adequate funds to replace the vehicle are available. For new vehicle purchases, funds are acquired/secured by the receiving unit and the new purchase is added to the WCF. The NOC monitors vehicle usage and replacement cycles, and notifies the NFEP when vehicles need to be replaced. The NFEP then coordinates with the receiving unit to order the replacement vehicle. When the order is placed, the NFEP works with the BLM Fleet Manager, the receiving unit, contracting, and the vendor to fill the order.
Acquisition of new WCF 600-series fire equipment that exceeds the Bureau’s fleet cap is authorized under the following terms:

- Vehicles support fire management actions identified in approved Land/Resource Management Plans and their associated Fire Management Plans. Vehicles will be purchased with funds approved by the Fire and Aviation Directorate.
- ### Vehicles will be transferred to the benefitting State/Field Office when received. New vehicle purchases will require completion of a BLM Fire and Aviation New Fire Fleet Request, ### in addition to ### Form 1520-58, Vehicle or Equipment Justification and Approval, and 1510-18, Obligating Funds For Acquisition of Working Capital Fund Assets. The forms are located on the ### NOC Fleet Management website and the NFEP website NOC website under Fleet Management, and BLM Fire Operations website under the NFEP tab.

### Funding

- Procurement of nonstandard equipment with fire management funds when standard equipment is available must have written approval by the Fire Operations Division Chief (FA-300) and the State Fire Management Officer.
- Most fire vehicles are funded through the WCF. Other types of fire equipment are funded through the normal budget process at the state and local level.
- Specialized equipment may be funded in a variety of ways including through the Fire and Aviation Directorate, special project allocations, available mid or year end funds, state or local funding, interagency agreement, or through the WCF.

### BLM Mobile Fire Equipment Ordering

- Ordering of BLM mobile fire equipment is completed through the NFEP at NIFC ### using the Fire Equipment Ordering System (FEOS). Available equipment is listed ### in the BLM Fire Equipment Ordering System (FEOS) web page on the Fire Operations website under the NFEP tab. Contact the National Fire Equipment Program for additional information.
- ### States have the authority to order their own equipment using WCF funds. However, the BLM has established required equipment and performance standards for new equipment. These standards have been established to reduce excessive procurement costs, maintain common operational functions, and provide a Bureau-wide standard fire fleet.
- All WCF 600-class vehicles must be ordered through FEOS. If states order their own equipment using WCF funds, they must have approval from the WCF Fleet Manager, State Fire Management Officer, and the Fire Operations Division Chief (FA-300) prior to ordering.
- The NFEP has established required equipment and performance standards for new equipment. These standards have been established to reduce excessive procurement costs, maintain common operational functions, and provide a Bureau-wide standard fire fleet.
States have the authority to order equipment using WCF funds; however, prior to ordering, approval is required from the WCF Fleet Manager, State Fire Management Officer, and the Fire Operations Division Chief (FA-300).

### Equipment Modification/Retrofitting
Modification proposals must be submitted through the Improvement and Deficiency reporting system or applicable FOG subcommittee for consideration and approved through the NFEP. Unauthorized modifications and retrofits have the potential to negatively impact equipment quality and safety and void manufacturer warranties. In such cases, the financial burden of corrective action will be borne by the home state/unit preparedness funding.

#### 600-Class Command Vehicle Procurement Standards
The 600-class vehicles below have been developed and configured specifically for the roles/asset types listed. New, replacement, or upgraded procurements outside of the listed roles/asset types requires State Fire Management Officer and Division Chief, Fire Operations (FA-300) approval utilizing the New Fire Fleet Request form located at web.blm.gov/internal/fire/fire_ops/nfep_policy.htm on the Fire Operations website under the NFEP tab. An electronic copy of all approvals will be provided to the National Fire Equipment Program (NFEP) manager prior to order.

- **644 Crew Carrier:** FPDSS funded hand crew.
- **651/653 Command Truck:** District/Unit AFMO, Fire Operations Specialist/Supervisor, FPDSS funded hand crew, FPDSS funded wildland fire module, FPDSS funded helitack crew.
- **652 Superintendent Truck:** FPDSS funded hand crew, FPDSS funded wildland fire module, FPDSS funded helitack crew.
- **661 Helitack Support:** FPDSS funded helitack crew.
- **District/Unit AFMO, Fire Operations Specialist/Supervisor:** 651/653/654/655/656/657/658 Command Truck.
- **FPDSS funded hand crew:** 644 Crew Carrier, 651/653/657/658 Command Truck, 652 Superintendent Truck.
- **FPDSS funded helitack crew:** 651/653/657/658 Command Truck, 652 Superintendent Truck, 661 Helitack Support.
- **FPDSS funded wildland fire module:** 651/653/657/658 Command Truck, 652 Superintendent Truck.

All 600-class vehicles will be ordered by NFEP through the BLM Fire Equipment Ordering System (FEOS). NFEP will route all FEOS orders through the individual State Fire Operations Group representative.

### Property Transfer/Replacement
Surplus and early turn-in fire vehicles may be transferred to another unit for continued service with the approval of the State Fire Management Officer and the WCF Manager. In these instances, the vehicle remains in the same class, and
the FOR and use rates will continue to be charged to the unit acquiring the
vehicle. Units may dispose of fire vehicles prior to the normal replacement date.
In these instances, no future replacement is automatically provided and there is
no accrued credit for the FOR collected on that unit prior to disposal. Units
acquiring this type of equipment continue payment of the FOR and use rates.
Mobile fire equipment transfers to other agencies or organizations must be
approved by the NFEP and FA-300 prior to initiating any transfer actions. ###
Submit a completed Form 1520-104v, Transfer of Asset-Fleet
(https://blmspace.blm.doi.net/oc/sites/property/operations/Pages/Fleet.aspx) to
the responsible NFEP production manager.

Conversions

Offices requesting to convert replacement fire equipment to a different class of
equipment must follow and provide the following criteria and documentation:
• Proposed changes meet current and future preparedness requirements
  identified in Resource/Land Management Plans and Fire Management
  Plans.
• Proposed changes result in an overall cost savings to the government.

If any proposed changes in equipment result in additional overall costs to the
government, documentation must include:
• Increased production rates which may offset additional costs.
• The requesting states availability of sufficient funds to cover additional
costs.

### BLM units will use the standard form available on the BLM Fire Operations
website to provide required documentation for approval for conversions,
transfers, and excess vehicles. Conversions require the following forms:
• National Operations Center forms found at
  https://blmspace.blm.doi.net/oc/sites/property/operations/Pages/Fleet.aspx
  ○ Form 1520-104v, Transfer of Asset-Fleet
  ○ Form 1520-58, Vehicle or Equipment Justification and Approval (if
    new equipment is an upgrade in class)
  ○ Form 1510-18V, Obligating Funds For Acquisition of Working Capital
    Fund Assets (if converting equipment doesn’t have sufficient funds
    available)
• 600 Series Conversion Notification
  https://web.blm.gov/internal/fire/fire_ops/nfep_policy.htm

BLM Engine Equipment Inventory

### BLM engines will be stocked as per the BLM National Engine Equipment
Inventory found on the BLM Fire Operations website. Engines will be stocked
with Normal Unit Stocking found at

Fire Equipment Maintenance and Care Standards
BLM fire equipment will be maintained to reflect the highest standards in performance and appearance, and will meet the following standards:

- Equipment exterior:
  - Clean and waxed
  - Free of debris
  - Items secured
  - Windows and mirrors cleaned
  - All mechanical systems in good working order

- Equipment interior:
  - Cab and compartments free of dirt and debris
  - Cab free of loose items
  - Equipment stored in appropriate compartments and organized
  - Windows and mirrors cleaned
  - Mechanical systems in good working order

Equipment will be stored in sheltered areas away from environmental elements whenever possible to prevent damage to critical seals, mechanical components, and the high-visibility finish. It is important to document all maintenance and keep thorough records of all repair work. This documentation may be used to determine responsibility for charges when later repairs are required to prove that damages are not the result of negligence.

**Fire Equipment Maintenance Procedure and Record (FEMPR)**

The Fire Equipment Maintenance Procedure and Record (FEMPR) will be used to document daily inspections and all maintenance for all WCF Class 600 fire equipment and any other vehicle used primarily for fire suppression operations. The FEMPR shall be maintained and archived to record historic maintenance for the duration of the vehicle’s service life. This historical data is beneficial in determining trends, repair frequency, and repair costs. The FEMPR can be found on the BLM Fire Operations website, under the NFEP tab.

Apparatus safety and operational inspections will be performed at the intervals recommended by the manufacturer and on a daily and post-fire basis as required.

- For engines and water tenders, all annual inspections will include a pump gpm test to ensure the pump/plumbing system is operating at or above the manufacturer’s minimum rating for the pump.

- Comprehensive (i.e., internal) tire inspections of all tires (including spare tires) will be completed during required annual inspections/service and at 10,000 mile intervals. Comprehensive inspections will be completed by tire service technicians and documented in the Tire Log.

**### BLM Fire Equipment Status Report (FES)**

Each state will submit an FES report to the NFEP annually by April 15. The FES is required to gather baseline data including the license number, type, make/model and location on mobile asset types (i.e., engines, off-highway vehicles and support vehicles). The Division of Fire Operations will issue an annual reminder notification to the Fire Operations Group (FOG) requesting this...
CHAPTER 2  
BLM PROGRAM ORGANIZATION AND RESPONSIBILITIES

information. The FES is available ### at the NFEP section of the BLM Fire Operations website on the BLM Fire Operations website under the NFEP tab.

BLM Engine Use Report (EUR)

All BLM engines will utilize the Engine Use Report. The EUR should be printed and completed daily as part of the Fire Equipment Maintenance and Procedure Record (FEMPR) and entered into the BLM EUR Share Point on a monthly basis. Access will be granted by the respective state Fire Operations Group (FOG) representative. The EUR is available ### at the Engine section of the BLM Fire Operations website on the BLM Fire Operations website under the Engine tab.

Equipment Bulletins and Equipment Alerts

The purpose of an Equipment Bulletin (EB) or an Equipment Alert (EA) is to share accurate and timely information regarding potential equipment problems and/or needed repairs. The EB is primarily intended to inform the equipment users of recommendations for repairs, potential hazards, or general information related to the overall maintenance, awareness, and safe operation of fire equipment. The EA is time sensitive and addresses potentially serious hazards or risks. The alert includes a specific action that the user must act upon.

Unexpected issues involving wildland fire vehicles which do not fall under other types of wildland fire reviews and investigations and/or other applicable federal, state or specific agency requirements must be reported. If an unexpected vehicle issue warrants an EB or EA it is issued by the National Fire Equipment Program Manager through the Operations Advisory Team and the Capital Equipment Committee. Members of these groups must ensure the information reaches all levels of the organization.

BLM Implementation of the Department of the Interior (DOI) Authorization for Use of Government Passenger Carrier(s) for Home-to-Work Transportation

The BLM recognizes the need for domiciling fire vehicles for specific positions during fire season in order to provide for more immediate response to wildfires during off-duty hours, and has been granted this authority by DOI.

• Only those positions authorized and pre-identified within the DOI memorandum will have the authority to domicile designated government vehicles.

• This authority is intended only for individuals in first response fire leadership roles who may be responding to initial attack fires directly from their home after hours.

• Government vehicles are used solely for official business and domiciled only during core fire season months when there is a heightened level of current or expected fire activity.

• Authorized positions will be recertified every two years and may be revised at that time.
• Units are responsible for maintaining documentation of home-to-work use of government vehicles. This documentation will be reviewed during annual fire and aviation preparedness reviews. A ### BLM standard tracking form has been developed and may be used for this purpose ### (http://web.blm.gov/internal/fire/fire_ops/toolbox.htm). It can be found on the BLM Fire Operations website at: http://web.blm.gov/internal/fire/fire_ops/toolbox.htm

Lights and Siren Response
Responding to BLM wildfire incidents normally does not warrant the use of emergency lights and siren to safely and effectively perform the BLM mission. However, there may be rare or extenuating circumstances when limited use of lights and sirens are appropriate and necessary due to an immediate threat to life.

Those BLM state organizations that determine a lights and sirens response is necessary to meet mission requirements must develop an operating plan that is signed and approved by the State Director and forwarded to the Chief, Division of Fire Operations, BLM FA. The operating plan must ensure the following:

1. All vehicles (command, engines, etc.) will be properly marked, equipped, and operated in accordance with state statutes, codes, permits, and BLM unit requirements.
2. Drivers will complete training in the proper use of lights and sirens response in accordance with National Fire Protection Association (NFPA) 1451 and 1002 standards, as well as any state requirements.
3. Engine drivers responding with lights and sirens will be minimally qualified as engine operator with a qualified engine boss in the engine; otherwise, driver must be engine boss qualified. Command vehicle drivers will be minimally qualified as single resource boss.
4. Lights and sirens will meet NFPA and state code requirements.
5. Posted speed limits will be followed at all times, regardless of response type.
6. Operators will stop or reduce speed as circumstances dictate prior to proceeding through all intersections.
7. Traffic light changing mechanisms (e.g., Opticons) will only be used under formal written agreement with state and local governments. They will be used only when they are necessary to create safe right-of-way through urban high-traffic areas. All pertinent state and local statutes and procedures will be adhered to.
8. Authorization to respond with lights and sirens does not cross state lines. No driver will be authorized by one state to operate with lights and sirens in another state.

### Foam Use
BLM engines are designed with integrated foam tanks and automatic foam proportioners as standard equipment. When properly used along with various foam nozzles, foam use increases the effectiveness of water. This equipment
should be used to apply approved foam concentrate along with water delivery
during fire suppression. Special exceptions should be made where accidental
spillage or over spray of the chemical could be harmful to the aquatic
ecosystem, or where other identified resource concerns are identified.

BLM Firefighters

Introduction
Firefighters operate within the Incident Command System (ICS), which is a component of the National Incident Management System (NIMS).

In the ICS, firefighters are either assigned as single resource overhead (individuals assigned to specific supervisory or functional positions) or as members of an organized unit. The individuals within these units are trained to provide different levels and types of tactical, logistical, and managerial capability.

These units include:

- **Hand Crews** – Vehicle mobile firefighters that specialize in the use of hand tools, chainsaws, portable pumps, and ignition devices for tactical operations. Hand crew types include Interagency Hotshot Crews (IHC)s, Type 2 Initial Attack Crews, Type 2 Crews, and Fire Suppression Modules.

- **Engine Crews** – Engine mobile firefighters that specialize in the use of engines for tactical operations.

- **Helitack** – Helicopter mobile firefighters that specialize in the use of helicopters for tactical and logistical operations.

- **Smokejumpers** – Fixed wing aircraft and parachute mobile firefighters that specialize in the use hand tools, chainsaws, and ignition devices for tactical operations.

BLM Firefighter Priority for Use

- Initial attack on lands for which the BLM has suppression responsibility.
- Other fire suppression/management assignments on BLM lands.
- Other fire suppression/management assignments on other agency lands.
- All Hazard – ESF#4 reference:

### BLM Fire Operations Group National Preposition Strategy

The Fire Operations Group (FOG) has established an Asset Intelligence Spreadsheet for priority placement and prepositioning of suppression resources. Information can be found on the FOG website at [http://web.blm.gov/internal/fire/fire_ops/fog.htm](http://web.blm.gov/internal/fire/fire_ops/fog.htm)

Mobilization of BLM Firefighters

BLM firefighters are mobilized to perform the following functions:

- Suppress fires and manage wildland fire incidents;
• Improve BLM initial attack capability;
• Maximize the utilization of limited BLM fire operational assets;
• Provide additional fire management capability in high tempo periods;
• Provide experience and developmental opportunities to BLM firefighters;
• Perform fire management project work or assignments; or
• Perform other project work or assignments.

There are six funding mechanisms for mobilizing BLM firefighters:
• Preparedness funding
• Suppression funding
• Short-term severity (State-level/Regional-level Severity) funding
• National-level severity funding
• National preposition funding
• State discretionary preposition funding

Preparedness Funding
Preparedness funding may be used to mobilize resources for normal preparedness activities such as:
• Movement of resources within a unit not associated with fire activity;
• Detailing firefighters to fill vacant positions;
• Project work or normal preparedness activities; and/or
• Training.

Fire managers have the authority to expend preparedness funding for preparedness activities. Mobilization of non-BLM federal resources with BLM preparedness funding requires a reimbursable agreement.

Suppression Funding
Suppression funding is used to mobilize resources to wildland fire incidents. BLM firefighters are mobilized directly to incidents using established methods (resource orders, initial attack agreements, dispatch plans, response plans, etc.).

Short-Term Severity (State-Level Severity)
Short-term severity funding may be used to mobilize resources for state/regional short-term severity needs that are expected to last less than one week, such as:
• Wind events;
• Cold dry front passage;
• Lightning events; and/or
• Unexpected events such as off-road rallies or recreational gatherings.

Each state director and the Fire and Aviation division chiefs for Operations and Aviation have been delegated the authority to expend “short-term” severity funds per fiscal year. This discretionary severity authorization can be expended for appropriate severity activities without approval from Fire and Aviation.
States will establish a process for requesting, approving, and tracking short-term severity funds.

**National-Level Severity Funding**

National-level severity funding is used to mobilize resources to areas where:

- Preparedness plans indicate the need for additional preparedness/suppression resources;
- Anticipated fire activity will exceed the capabilities of local resources;
- Fire season has either started earlier or lasted longer than identified in the Fire Danger Operating Plan;
- An abnormal increase in fire potential or fire danger (e.g., high fine fuel loading, fuel dryness) not planned for in existing preparedness plans; and/or
- There is a need to mitigate threats to values identified in Land and Resource Management Plans with AD, Fire and Aviation concurrence.

In addition to the above criteria, the AD, Fire and Aviation may consider other factors when approving requests for national severity.

Guidance for requesting and utilizing national-level severity funding is found in Chapter 10 and on the BLM Fire Operations website. Requests should be consolidated by state, coordinated with Fire and Aviation, and then submitted to Fire and Aviation by the State Director. The official memo requesting funds should be mailed to the Assistant Director, Fire and Aviation. An electronic copy should also be e-mailed to “BLM_FA_Severity@blm.gov.”

Severity funding requests will be accepted and approved for a maximum of 30 days, regardless of the length of the authorization. Use of severity funding must be terminated when abnormal conditions no longer exist. If the fire severity situation extends beyond the 30-day authorization, the state must prepare a new severity request.

An approval memo from Fire and Aviation will list authorized resources along with a cost string code for each state and field office to use for all resources. All resources authorized through this process will be counted in the state’s severity authorization limit, including extension of exclusive use aircraft contracts.

In order to support the BLM national aviation strategy, which includes prioritized allocation based on need, air resource mobility, and cost containment, a state may be directed to release an air resource to another state. All charges related to releasing an air resource will be covered by Fire and Aviation or the receiving state.

**National Preposition Funding**

National preposition funding is used to mobilize resources to areas with anticipated fire activity when other funding is not available. Units may request national preposition funding from FA to acquire supplemental fire operations assets to increase initial attack capability. National preposition funding may be used to mobilize resources when BLM units:
Do not have available preparedness funding;
2. Do not have available short-term severity funding; or
3. Do not meet the criteria for use of national severity funding.

Approved national preposition funding may be used only for travel and per diem costs for the duration of the assignment, and overtime labor costs associated with the original preposition move.

Each State Director has been delegated the authority to expend national preposition funding within an allocation limit established annually through issuance of an Instruction Memorandum. The criteria stated above apply to this allocation.

- **National Preposition Request Process**
  - Unit FMO identifies need and notifies State FOG representative. FOG representative informs SFMO.
  - FOG representative coordinates with unit FMO to verify need and determine asset types, numbers, and projected preposition location.
  - Requesting FOG representative queries FOG group and identifies available assets.
  - Requesting and sending FOG representatives jointly complete the BLM Preposition Request Form found on the BLM Fire Operations website.
  - Requesting FOG representative will submit the request electronically via e-mail to “BLM_FA_Prepositioning@blm.gov” to acquire Division of Fire Operations (FA-300) approval. If aviation assets are requested, FA-300 will coordinate with the National Aviation Office (FA-500) and secure FA-500 approval.
  - FA-300 will notify the requesting and sending FOG representatives via e-mail when the request is approved.
  - After securing FA-300/500 approval, the requesting FOG representative places name request order(s) for specified assets through normal coordination system channels.
  - Responding BLM assets will be assigned to a temporary host unit by the receiving FOG representative.
  - Responding assets, sending/receiving FOG representatives, and the temporary host unit will negotiate length of assignment and crew rotation, and ensure that prepositioned personnel meet work/rest requirements.

BLM preposition funding request information can be found at the BLM Fire Operations website.

**State Discretionary Preposition Funding**

Each State Director has been delegated the authority to expend preposition funding for prepositioning activities in amounts determined by the BLM Fire Leadership Team. This discretionary preposition funding authorization can be expended for appropriate preposition activities (according to the criteria...
established for National Preposition Funding) without approval from the AD.

Each state will establish a process to document requests and approvals, and maintain information in a file.

### BLM Fire Training and Workforce Development

**BLM Fire Training and Workforce Development Program**

The BLM National Fire Training and Workforce Development Program is located at NIFC and works for the BLM Chief, Preparedness and Suppression Operations. The program develops the wildland firefighting workforce through qualification standards, training standards, and workforce development programs in support of BLM fire management.

**BLM Standards for Fire Training and Workforce Development**

The BLM Fire Training and Workforce Development Program, in coordination with the BLM Fire Operations Group and the BLM Fire Training Committee, is responsible for publishing the *BLM Standards for Fire Training and Workforce Development*. The *BLM Standards for Fire Training and Workforce Development* provides fire and aviation training, qualifications, and workforce development program management direction. This document is available at https://www.nifc.gov/training/trainingBLM_main.html.

Personnel hired by the BLM must meet requirements established in the position description. If the position description requires Incident Command System qualifications, only qualifications and minimum requirements specified in the ***NWCG NIMS: Wildland Fire Qualification System Guide NWCG Standards for Wildland Fire Position Qualifications*** (PMS 310-1) will be applied as selective factors and/or screen-out questions. To avoid reducing candidate pools, BLM-specific requirements that are supplemental to the PMS 310-1 may not be used as selective placement factors/screen-out questions. Supplemental BLM-specific training or qualification requirements may only be used as selective factors and/or screen-out questions when requested and justified by the selecting official, and approved by human resources. Impacts to the candidate pool must be addressed in the justification. As with all other BLM or DOI-specific training/experience requirements (e.g., Do What’s Right training, purchase card training) that newly hired employees from other agencies may not have, the supervisor and IQCS certifying official are responsible for reconciling that employee’s training and IQCS record after the employee has entered on duty. This may be accomplished by providing additional training/experience or by manually awarding competencies as per established IQCS protocol.
# BLM Program Organization and Responsibilities

## Chapter 2

### BLM Firefighters General Non-Fire Training Requirements

#### Administratively Determined (AD) and Emergency Firefighters (EFF)

<table>
<thead>
<tr>
<th>Training Required</th>
<th>Initial Requirement/ Frequency</th>

</thead>
</table>
| Do What’s Right/EEO/ Diversity | • Annually | • Instructor-led, DOI Talent, or as determined by EEO Manager  
• FMO (Do What’s Right)  
• EEO Manager |

**Driver Training for Regular Drivers of Fire Equipment**

All regular drivers of specialized vehicles (e.g., engines, water tenders, crew carriers, fuel tenders, helicopter support vehicles) must complete BL-300, *Fire Vehicle Driver Orientation* (initially) and RT-301, *Fire Vehicle Driver Refresher Training* (annually). Course materials are available at the BLM Fire Training website at https://www.nifc.gov/training/trainingFireVehicle.html.

For the purposes of this policy, a regular driver is defined as an employee whose duties include driving fire equipment on a regular basis. This may include highway, off-road, city, mobile attack, and extreme terrain driving.

**BLM Firefighter Mandatory Physical Fitness Standards**

The *NIMS: Wildland Fire Qualification System Guide NWCG Standards for Wildland Fire Position Qualifications* (PMS 310-1) establishes physical fitness standards for NWCG sanctioned firefighters. These standards are assessed using the Work Capacity Tests (WCT). Prior to attempting the WCT, all permanent, career-seasonal, temporary, Student Career Experience Program (SCEP), and AD/EFF employees who participate in wildland fire activities requiring a fitness level of arduous must participate in the DOI Medical Qualification Standards Program (DOI MSP).

Employees serving in wildland fire positions that require a fitness rating of arduous as a condition of employment are required to perform physical fitness conditioning for one hour of duty time each work day. Special exceptions such as being assigned to an incident, travel status, injuries, details, etc., may be granted. BLM employees wholly funded by fire preparedness and/or fuels who maintain a fitness rating of arduous may be authorized one hour of daily duty time for physical fitness conditioning. Participation will be negotiated with the employee’s supervisor. Employees serving in positions that require a fitness rating of moderate or light may be authorized up to three hours per week.

Units will maintain a fitness program that ensures BLM firefighters will possess the physical ability to perform the duties of their positions safely and effectively while ensuring compliance with the requirements of the Work Capacity Test (WCT).

Information on the WCT and the DOI MSP is located in Chapter 13 of this publication. Fitness and conditioning information may be found at https://www.nifc.gov/FireFit/index.htm.
BLM National Fire Operations Fitness Challenge

The BLM fire operations fitness challenge encourages and recognizes achievement in physical fitness by BLM firefighters. The fitness challenge provides a common system by which BLM firefighters can measure current fitness, establish fitness goals, and track fitness improvement.

Efforts are underway to update the fitness challenge. For current specific information about the fitness challenge, refer to the fitness challenge information on the BLM Fire Operations website.

Interagency Fire Program Management Standards

The BLM follows the Interagency Fire Program Management Qualifications Standards and Guide (IFPM Standard), January 2000. The IFPM Standard does the following:

- Establishes minimum qualifications standards for 11 key fire management positions. These standards include 1) basic requirements, 2) specialized experience requirements, 3) NWCG incident management qualifications, 4) additional required training.
- Provides a “complexity rating for program management” table, which is used to determine overall complexity of the unit-level fire program. This is used because qualification standards for some of the 11 identified positions are tied to fire program complexity.

State- and unit-level fire managers should consult human resources officials and apply the IFPM Standard as appropriate. IFPM information is located at: https://www.ifpm.nifc.gov.

BLM Hand Crews

BLM Hand Crew Standards (all crew types)

- **Language** – CRWB and FFT1: must be able to read and interpret the language of the crew as well as English.
- **Flight weight** – 5,300 pounds.
- **Personal gear** – Sufficient for 14-day assignments.
- **Physical fitness** – Arduous, all positions.
- **Required equipment and PPE** – Fully equipped as specified in the Interagency Standards for Fire and Fire Aviation Operations.

BLM Interagency Hotshot Crews (IHCs)

BLM IHCs will meet all requirements found in the Standards for Interagency Hotshot Crew Operations (SIHCO) and the Interagency Standards for Fire and Fire Aviation Operations while providing a safe, professional, mobile, and highly skilled hand crew for all phases of fire management and incident operations.

BLM IHC Annual Crew Mobilization

Prior to becoming available for mobilization, each BLM IHC will complete the BLM Hotshot Crew Preparedness Review Checklist (#18) and the Annual IHC
Mobilization Checklist (SIHCO, Appendix C). The IHC Superintendent, supervising fire management officer, and supervising agency administrator will complete both checklists. Completed and signed checklists will be sent to the State Fire Management Officer for concurrence. Upon concurrence, the State Fire Management Officer will notify the appropriate Geographic Area Coordination Center and the Branch Chief, Preparedness and Suppression Standards (FA-320) of crew status, and provide copies of the BLM Hotshot Crew Preparedness Review Checklist (#18) and the Annual IHC Mobilization Checklist (SIHCO, Appendix C) to each.

Establishing or Converting BLM IHC
BLM state directors must request approval from the AD FA prior to beginning the process to establish a new BLM IHC or to convert a current Type 2 or Type 2 IA crew to an IHC. Upon approval from AD FA, BLM states will follow the Crew Certification Process as outlined in the SIHCO, Chapter 5. The IHC certification process will be coordinated with FA-300.

BLM IHC Decertification and Recertification
Changes to crew qualifications and capabilities should be closely examined by the superintendent to ensure that all requirements contained in the SIHCO are met. Any BLM IHC that is unable to meet the minimum requirements will be placed in Type 2 IA status until the requirements can be met. Exceptions to the requirements must be requested by the State Fire Management Officer (for IHCs based in the Eastern and Southern Geographic Areas, the request must be made by the State Director, Eastern States), and may be granted on a case-by-case basis by the Chief, Division of Fire Operations (FA-300).

Short-term inability to meet the requirements may not necessarily require recertification, but will require completion of the Annual IHC Mobilization Checklist (SIHCO, Appendix C) and concurrence from the Branch Chief, Preparedness and Suppression Standards before regaining IHC status. Longer-term or more significant failures to meet the requirements may require the full recertification process as stated in the SIHCO, with oversight from the Division of Fire Operations.

BLM IHC Size
Standard crew size is 20-22 with a maximum of 25. For national mobilization, BLM IHCs will have a minimum of 18 personnel. BLM IHC superintendents will obtain prior approval from the respective GACC when the assignment requires fixed wing transport of an IHC with more than 20 personnel.

BLM IHC Status Reporting System
BLM IHCs will utilize the National IHC Status Reporting System to report availability, assignment status, and unavailability periods. Refer to Chapter 13 for instructions on how to report.

Release Date: January 2020

### BLM Veteran Crews

BLM veteran crews are comprised primarily of veterans from the United States Armed Forces. Each veteran crew trains and works as a single unit, and mobilizes fully equipped with transportation. The diverse make-up of veteran crewmembers provides a high level of professionalism, leadership, and skills that are transferable to the wildland fire environment.
## BLM Veteran Crew Types and Locations

<table>

## BLM Fire Suppression Modules

BLM Fire Suppression Modules are comprised of 5-10 firefighters and are used primarily for wildfire suppression, fuels reduction, and other fire management duties. They are capable of performing self-contained initial attack suppression operations, and can generally provide incident management capability at the Type 5 level.

## BLM Fire Suppression Module Mobilization

BLM Fire Suppression Modules will be statused, tracked, and mobilized in the ROSS system using the resource identifier “Module, Suppression.”

## BLM Wildland Fire Modules

Refer to Chapter 13.

## BLM Engines

BLM engines carry 2-6 firefighters and are used primarily for wildfire suppression, fuels reduction, and other fire management duties. They are capable of performing self-contained initial attack suppression operations, and can generally provide single resource incident management capability up to the Type 4 level.

## BLM Engine Ordering

- BLM engines will status themselves with their local dispatch center in accordance with local policy and procedure.
- Availability of BLM engines for off unit assignments rests with local unit fire management.
- BLM units needing engines from another state for support will contact their state operations lead with a request.
- The state operations lead will contact the FA Division of Operations or other BLM state office operations leads with the request.
BLM engines are typed according to interagency standards as established by NWCG. See Chapter 14 for engine typing standards.

### BLM Engine Minimum Staffing Requirements

#### All BLM engines will meet these staffing standards on every fire response.
- BLM engines operating with five or more personnel will always have a fully qualified ENOP (other than the Engine Boss). The Engine Boss must be qualified as ICT4;
- BLM engines operating with four personnel will always have an FFT1 (other than the Engine Boss). The Engine Boss must be qualified as ICT5;
- BLM Engines operating with three or fewer personnel must have an Engine Boss qualified as ICT5 or higher; and
- Chase vehicles are considered part of the engine staffing.

BLM utilizes the term “Engine Captain” to describe an individual whose position description reflects primary responsibility as a supervisory wildland firefighter of a wildland fire engine in a BLM fire management organization. “Engine Captain” is not a fireline qualification.

<table>

</tr>
<tr>
<td></td>
<td></td>
<td>669 Non-Tactical Water-Tender</td>
<td>1</td>
<td></td>
</tr>
</tbody>
</table>

1. All WCF class 668 super-heavy engines will be minimally staffed as Type 3 or 4 engines with an Engine Boss, Engine Operator, and Engine Crewmember and two FFT2s. All WCF class 668 super-heavy tactical water tenders (2 seats, Tatra chassis, volume pump rated at 250 GPM and 150 PSI or better) will be minimally staffed with an Engine Boss and an Engine Crewmember.

2. A WCF class 669 non-tactical water tender may be staffed with a crew of one driver/operator when it is used in a support role as a fire engine refill unit or for dust abatement. These operators will pass the moderate Work Capacity Test (WCT), take BL-300/RT-301 and annual refresher training, and possess a CDL with tank endorsement and air brake endorsement (if applicable).
All BLM engines will meet these minimum staffing requirements on every incident response:

- Minimum staffing for Type 6 engines is two personnel: one Single Resource Boss - Engine (ENGB) and one Firefighter Type 2 (FFT2).
- Minimum staffing for Type 3, 4, and 5 engines is three personnel: one ENGB and two FFT2.

When staffing a BLM engine with an employee from another agency on a short-term basis (detail, severity assignment, etc.), the qualification standards of that agency will be accepted. These qualifications must meet PMS 310-1 requirements for the position that the detailed employee is serving in. Fire Management Officers should consider requiring these employees to attain BLM required training and qualifications for long-term details/assignments.

### BLM Engine Training and Qualification Requirements

BLM has established additional training and qualification requirements for Engine Operator (ENOP) and Engine Boss (ENGB). These additional requirements are as follows:

<table>

***The BLM utilizes the Engine Operator (ENOP) fireline qualification to provide additional expertise in engine maintenance, pump operations, and vehicle operation. ENOP is required prior to qualification as a BLM Engine Boss (ENGB).***

### BLM Engine Driver Requirements

For engines greater than 26,000 GVWR, the driver of the engine is required to possess a commercial driver’s license. Refer to Chapter 7 for more information.
WCF Class 650 and 668 vehicle drivers are required to complete WCF Class 650 and 668 Driver and Maintenance Training (once). WCF Class 650 and 668 Driver and Maintenance Training may be conducted at the unit/zone/state level utilizing qualified and experienced 650 and 668 operators, with prior approval and oversight by the NFEP. The NFEP maintains a list of qualified cadre members to assist as needed. NFEP staff are available as unit instructors; the hosting unit is responsible for course coordination.

All hands-on components of engine driver training courses will be conducted on the specific vehicle or vehicle type that the driver will be using.

Equivalent courses that satisfy driver training requirements, such as the National Safety Council sanctioned Emergency Vehicle Operator Course (EVOC), will be approved in writing by the Division Chief, Fire Operations, FA on a case-by-case basis.

BLM engine driver training satisfies the Bureau requirement for 4X4 driver training stated in H-1112-1, Chapter 15.

BLM Smokejumpers

BLM Smokejumpers operate in teams of 2-8 firefighters and are used primarily for wildfire suppression, fuels reduction, and other fire management duties. They are capable of performing self-contained initial attack suppression operations, and commonly provide incident management capability at the Type 3 level. BLM Smokejumpers provide personnel to Type 1 and Type 2 incidents as command and general staff or other miscellaneous single resource. The primary locations of the BLM smokejumper bases are Boise, Idaho and Fairbanks, Alaska.

BLM Smokejumper (SMKJ) Operations

BLM smokejumper operational and administrative procedures are located in the Interagency Smokejumper Operations Guide (ISMOG), the BLM Ram-Air Training Manual (RATM), the Great Basin Smokejumpers User Guide, Alaska Geographic Area Coordination Center Mob Guide, and other pertinent agreements and operating plans.

BLM Smokejumper Mission

BLM smokejumper aircraft are dispatched with a standard load of 8 smokejumpers and equipment to be self-sufficient for 48 hours. A typical smokejumper mission takes 30 minutes over a fire. A spotter (senior smokejumper in charge of smokejumper missions) serves as the mission coordinator on smokejumper missions. This may include coordinating smokejumper operation with on-scene aircraft over a fire until a qualified ATGS arrives.

BLM Smokejumper Coordination and Dispatch
Smokejumpers are a national shared resource and are ordered according to geographic area or national mobilization guides. The operational unit for Smokejumpers is “one load” (8 smokejumpers). Specific information on the coordination, dispatch, ordering, and use of BLM smokejumpers can be found in the BLM Great Basin Smokejumpers User Guide, and in the Alaska Geographic Area Coordination Center Mob Guide. Contact BLM smokejumpers in Boise at (208) 387-5426 or in Alaska at (907) 356-5540 for these publications.

BLM Ram-Air Parachute System Management

The BLM has exclusive authority for all aspects of BLM Ram-Air parachute system management and operations. This includes:

- System Changes and Modifications – All BLM Ram-Air parachute system modifications, research, and development will be documented and approved using the BLM Smokejumper Modification Document (MODOC) System.
- Ram-Air Training – All smokejumpers utilizing the BLM Ram-Air Parachute system will adhere to the training processes and procedures in the BLM Ram-Air Training Manual.
- Malfunction Abnormality and Reporting System (MARS) – The MARS is a BLM smokejumper system used to report and document malfunctions and abnormalities associated with BLM smokejumper parachute jumping, parachute equipment, and parachute related aircraft operations. The MARS database is used by BLM smokejumper management to analyze malfunctions and abnormalities, identify trends, and initiate corrective actions. BLM retains exclusive authority to apply corrective actions to all MARS.
- BLM Approved Smokejumper Equipment List – All smokejumpers using the BLM Ram-Air parachute system will only utilize equipment listed in the BLM Approved Smokejumper Equipment List unless specific approval is authorized through a BLM Smokejumper Modification Document (MODOC).
- Incidents, Reviews, and Accident Investigations – BLM smokejumpers will follow all procedures for accident review and investigation as outlined in the Interagency Standards for Fire and Fire Aviation Operations, Chapters 2 and 18. The BLM smokejumpers will report incidents/accidents as appropriate, on the MTDC Injury Reporting Form. A BLM Smokejumper subject matter expert will participate in any investigation or review involving the BLM Ram-Air Parachute System.
- Adherence to Agency Policies and Manuals – BLM will adhere to its own policies, guidelines, manuals, handbooks and other operational documents as they pertain to smokejumper parachuting operations. The Smokejumper Base Managers will work through established command channels to change BLM Ram-Air Parachute System policies, guidelines, manuals, handbooks and other operational documents, and/or to request research and development of new products.

BLM Smokejumper Aircraft
BLM Smokejumpers use aircraft approved by the Interagency Smokejumper Aircraft Screening and Evaluation Subcommittee (SASES). All aviation operations will be performed according to agency policies and procedures. BLM Smokejumper-specific aviation standards are identified in the *BLM Smokejumper Air Operations Manual*.

**BLM Smokejumper Training**

To ensure proficiency and safety, smokejumpers complete annual training in aviation, parachuting, fire suppression, administration, and safety. Experienced jumpers receive annual refresher training in these areas. First-year smokejumpers undergo a rigorous 4-5 weeks long smokejumper training program.

Candidates are evaluated to determine:
- Level of physical fitness
- Ability to learn and perform smokejumper skills
- Ability to work as a team member
- Attitude
- Ability to think clearly and remain productive in a stressful environment

### BLM Smokejumper Training and Qualification Targets

<table>

<td>ICT4, CRWB, FIRB</td>
<td>FEMO</td>
</tr>
<tr>
<td>Rookie Smokejumper</td>
<td>ICT5</td>
<td></td>
</tr>
</tbody>
</table>

### BLM Smokejumper Jump Proficiency Guideline

To ensure proficiency and safety, it is the goal of BLM smokejumpers to perform a training or operational jump every 14 days. A longer duration time period between jumps can occur due to fire assignments or other duties. Guidelines for managing gaps between jumps beyond 14 days are included in the BLM Ram-Air Training Manual. Funding for currency and/or training jumps are included in the home unit’s normal preparedness budgets. Units hosting contingents or spike bases will not be charged for any proficiency jump or related activities.

### BLM Smokejumper Physical Fitness Standards

The BLM smokejumper physical fitness standards are mandatory. All BLM smokejumpers must pass the BLM smokejumper physical fitness standards in order to participate in smokejumper parachute training, perform training or operational jumps.
BLM Smokejumper Physical Fitness Standards

<table>
<thead>
<tr>
<th>(Two options)*:</th>
</tr>
</thead>
<tbody>
<tr>
<td>A. 1.5-mile run in 10:47 minutes or less, or</td>
</tr>
<tr>

</tr>
<tr>
<td>30 push-ups</td>
</tr>
<tr>
<td>6 pull-ups</td>
</tr>
</tbody>
</table>

Arduous Work Capacity Test
* Both options of this element are tested during smokejumper rookie training.

Retesting
Retesting criteria include:
- Returning BLM smokejumpers will be provided up to three opportunities to pass the BLM smokejumper physical fitness standards. Each retest will occur no sooner than 24 hours after failing the previous test, and will consist of all elements of the smokejumper physical fitness test.
- BLM smokejumper candidates will be provided one opportunity to pass the BLM smokejumper physical fitness standards.
- If an employee sustains an injury (verified by a licensed medical provider) during a test, the test will not count as an attempt. Once an injured employee has been released for full duty, the employee will be given time to prepare for the test (not to exceed 4 weeks).

BLM Exclusive Use Helitack Crews
The BLM contracts for the exclusive use of vendor supplied and supported helicopters. These aviation resources are Type 2 (medium) or Type 3 (light) helicopters and are located at BLM Districts throughout the western United States. Helitack Crews are assigned to manage each contracted helicopter and perform suppression and support operations to accomplish fire and resource management objectives.

Each contract specifies a Mandatory Availability Period (MAP) that the aircraft will be assigned for the exclusive use of the BLM. The National Aviation Office provides the funding to pay for the aircraft’s availability costs.

The BLM host unit is responsible for providing a Helitack Crew that meets the minimum experience and qualification requirements specified in the Exclusive Use Fire Helicopter Position Prerequisites table in Chapter 16. Each functional or supervisory level must have met the experience and qualification requirements of the next lower functional level. The minimum daily staffing level (7 day staffing) must meet the level indicated in the Interagency Helicopter Operations Guide (IHOG) NWCG Standards for Helicopter Operations, chapter 2 (BLM helicopters operated in Alaska need only be staffed with a qualified Helicopter Manager).
The host unit is also responsible for providing administrative support, and Interagency Helicopter Operations Guide (IHOG) NWCG Standards for Helicopter Operations specified equipment, vehicles, and facilities for their Helitack Crews and any other associated specialized equipment.

### Type 1 Helitack Program

The BLM type 1 helitack program is a pilot project. In order to thoroughly evaluate the effectiveness of this initial attack program, prioritization and prepositioning of the BLM type 1 helitack program must occur nationally through a coordinated effort.

The BLM type 1 helitack program’s primary mission is initial attack. This aircraft comes with a compliment of crewmembers and flight mission capabilities that are unique to this category of aircraft. While most effective at providing rapid initial response, the crew is equipped to respond to extended attack incidents and critical need missions on large fires.

**Mobilization**

- As with any initial attack resource, Boise Helitack and the Black Hawk are most effective when prepositioned in areas with predicted or current elevated fire danger.
- BLM States may request to preposition Boise Helitack and the Black Hawk, either directly to the BLM State Duty Officer hosting the crew, or through the National Duty Officer (208-387-5876). Contact the National Duty Officer for preposition funding options.
- Order as Type 1 EU – Limited
- Daily staffing of 16 to 20 Helitack personnel and 5 vendor personnel accompany the aircraft.
- Ground support vehicles include helitack buggies, command vehicles, large fuel tender, and mechanic truck with trailer.
- Initial Attack aircraft requests should be ordered on a Resource Order via ROSS and/or Aircraft Dispatch Form. Generating and awaiting a Resource Order should not be allowed to affect the response time for an initial attack mobilization within the host Geographic Area or with neighborhood agreements across Geographic Area boundaries through established dispatch ordering channels. Resource orders through ROSS can be provided after mobilization has occurred for initial attack.
- The BLM State Duty Officer for the state hosting Boise Helitack is responsible for:
  - Prioritizing use of Boise Helitack to meet BLM and interagency initial attack priorities.
CHAPTER 2  BLM PROGRAM ORGANIZATION AND RESPONSIBILITIES

○ Communicating status/location of Boise Helitack by maintaining the Asset Intelligence System (AIS) utilized by the BLM Fire Operations Group (FOG);

○ Communicating status/location of Boise Helitack with the Helitack Crew Supervisor, District Duty Officers, surrounding BLM State Duty Officers, and the pertinent Geographic Area Coordination Center (GACC); and

○ Approving requests to utilize the aircraft and crew beyond initial attack and communicating approval to the GACC.

• The aircraft and crew may be reallocated to areas of greatest need by the BLM Division Chief, Aviation, in coordination with the National Duty Officer.

• All initial attack resource orders for the BLM type 1 helitack program should be honored regardless of dispatch or jurisdictional boundaries.

Management Actions for Noncompliant Remote Automatic Weather Stations (RAWS)

Fire managers must be cognizant that all RAWS will not be 100% compliant with standards established in the Interagency Wildland Fire Weather Station Standards and Guidelines (NWCG PMS 426-3) NWCG Standards for Fire Weather Stations (PMS 426-3) at all times. Furthermore, even when RAWS are fully compliant and operational, RAWS data should be used only in conjunction with other predictive services and fireline data sources in fire management decision making, particularly at the tactical level.

Fire managers must monitor RAWS status and recognize when a station is noncompliant. Noncompliant stations are broadly categorized as follows:

• **Inoperative station.** This station is noncompliant but poses no danger of providing inaccurate weather data because it is not transmitting data.

• **Operating station that has exceeded the required maintenance cycle.** These stations are identified in the weekly “Wildland Fire Management Information (WFMI) weather Noncompliance Report,” which is widely distributed by email and available at [https://raws.fam.nwcg.gov/nfdrs.html](https://raws.fam.nwcg.gov/nfdrs.html) [https://raws.nifc.gov/standards-guidelines](https://raws.nifc.gov/standards-guidelines). Although transmitted data may be accurate, noncompliance means the data should not be trusted.

• **Operating station that transmits data outside of NWCG PMS 426-3 standards due to faulty sensors or components.** These stations are most easily identified by local users who are familiar with environmental trends and conditions and can recognize data that seems abnormal or clearly unrepresentative of current conditions. This usually indicates faulty sensors or components.

When noncompliant RAWS are identified or suspected, fire managers should implement the following hazard mitigation actions to expedite RAWS repair and to reduce risk to fire personnel:
Contact the RAWS Help Desk (208-387-5475 or rawshelp@blm.gov).
Identify the station and discuss troubleshooting steps or schedule the necessary repairs. If there are trained personnel in the local area, the Help Desk may be able to ship the required parts and coordinate the repairs via phone. If a professional technician needs to make a site visit, provide a local individual to assist, and use this opportunity to provide training for local personnel.
Ensure that appropriate personnel and organizations know which stations are out of compliance, and which sensors are affected, if possible. Direct them to alternative weather data sources if possible.
Use nearby compliant RAWS if available.
Based on local knowledge of specific RAWS problems (e.g., which sensor is out of compliance), separate reliable data from unreliable data.
Consider using data from belt weather kit readings, other portable device observations, Predictive Services or National Weather Service offices, or non-fire weather sources such as airports.

Fire managers should ensure that locally held portable RAWS are compliant prior to use; noncompliant portable RAWS will not be activated for data processing via WFMI-weather.

Sagebrush Rangeland and Sage-Grouse Conservation Related to Wildland Fire

Firefighter and public safety has been, and continues to be, the BLM’s highest fire management priority. Protecting, conserving, and restoring the sagebrush rangelands and sage-grouse habitat are among BLM fire management’s highest natural resource objectives.

The BLM’s management responsibilities include taking actions on public lands to control and manage wildfire and invasive plants in order to protect, conserve, and restore the sagebrush rangelands and sage-grouse habitat. The BLM’s goal is to limit acres burned and damaged within and adjacent to sage-grouse habitat. The BLM will meet this goal through the certain management actions, including fuels management, fire operations and post fire recovery. The following provides guidance to convey leader’s intent while recognizing that not all of these actions and activities apply to all affected offices and successful implementation may look different throughout the BLM.

Prior to, during, and following wildfires, BLM field offices will:
- Protect, conserve, and restore sagebrush rangelands and sage-grouse habitat.
- Strive to maintain and enhance resilience of the sagebrush rangelands, including through fuels and vegetation treatments.
- Foster existing relationships with partners and develop new cooperative relationships that will help bolster BLM capacity to protect sagebrush rangelands and sage-grouse habitat.
With regard to fire operations in sagebrush rangelands and sage-grouse habitat, BLM field offices will:

- Prioritize firefighter and public safety including following our “Standard Firefighting Orders,” mitigate any “Watch-Out Situations,” and apply the principles of Lookouts, Communications, Escape Routes, and Safety Zones on all fire assignments.
- Maintain a strong and proactive preparedness capability when conditions indicate potential for multiple ignitions and large fire growth.
- Maintain situational awareness during suppression resource drawdown levels under multiple ignition and large fire growth conditions.
- Boost suppression capability in critical sage grouse habitat when severe fire weather conditions are predicted.
- Generate interest in local residents and public land users becoming a trained and equipped fire response force to work in concert with existing partners.
- Expand the use of Rangeland Fire Protection Association (RFPA) or Rural Fire Department (RFD) suppression resources.
- Continue and expand efforts to train and use local, non-federal agency individuals as liaisons in wildland fire detection and suppression operations.

The Fire and Aviation Directorate may continue to review wildfires occurring in sagebrush rangelands and sage-grouse habitat as part of the Significant Wildland Fire Review process. A Significant Wildland Fire Review may be conducted, in part, when there are significant political, social, natural resource, complexity, size, or policy concerns; significant and complicated cost-share or multi-jurisdictional issues; or the affected line officer requests a review.

When sage-grouse habitat is burned or threatened by wildland fires burning on or originating on Bureau managed lands, reporting requirements and documentation in the Incident Status Summary (ICS-209) regarding the impact to sage-grouse habitat should be in accordance with National Multi-Agency Coordinating Group (NMAC) Correspondence #2015-7 dated June 23, 2015 and the Office of Wildland Fire (OWF) Policy Memorandum #2015-007. For additional guidance on sage-grouse inputs to the ICS-209, see the National Interagency Mobilization Guide.

Current habitat designations geospatial data layers provided to the WFDSS system and for calculating acres burned are available at https://www.nifc.gov/fireandsagegrouse/mapsData.html.

BLM Use of the Wildland Fire Decision Support System (WFDSS)

BLM follows interagency policy regarding use of WFDSS. Standards for when WFDSS will be used are found in Chapter 11.
To ensure safe and efficient suppression operations, all BLM fire resources will use a standard GPS datum and latitude/longitude (coordinate) format when communicating GPS references. The standard datum is WGS84, and the standard coordinate format is Degrees Decimal Minutes (DDM). For other activities (e.g., mapping, fire reporting, planning) agency standards will apply.
Chapter 3
National Park Service Program Organization and Responsibilities

Introduction
This chapter summarizes specific requirements for NPS fire management programs. Fire managers should consult DO-18 Wildland Fire and RM-18 Wildland Fire for full guidance and descriptions of requirements summarized in this chapter. If there is a discrepancy between guidance found in this document and DO or RM-18, information contained herein will be considered authoritative as updates occur on a more frequent cycle than either the DO or RM.

Employee Conduct
All employees, cooperators, contractors, and volunteers who participate in wildland fire activities have the duty to treat each other with respect and to maintain a work environment free of harassment and misconduct. This includes conduct broader than the legal definitions of harassment and sexual harassment. Harassment becomes illegal when enduring the offensive conduct becomes a condition of continued employment or the conduct is sufficiently severe or pervasive as to create a work environment that a reasonable person would consider intimidating, hostile, or abusive. Employees are subject to disciplinary action, up to and including removal, for engaging in harassing conduct while in the workplace or in any work-related situation, including while on official travel. Off-duty misconduct may subject the employee to potential discipline if the misconduct is likely to have an adverse effect on the NPS (e.g., harassing a co-worker, visitor, contractor, or volunteer during off-duty hours). More extensive information, including how to report misconduct or harassment, is found in Director's Order 16E.

Agency Administrator Roles

Director
Release Date: January 2020
The Director of the National Park Service is responsible to the Secretary of the Interior for fire management programs on public lands administered by the National Park Service. The Division of Fire and Fire Aviation Management is responsible to the Director for policy formulation and program oversight.

The Chief, Division of Fire and Aviation Management will meet the required elements outlined in the Management Performance Requirements for Fire Operations.

**Regional Director**

The Regional Director is responsible to the Director for fire management programs and activities within their region.

The Regional Director will meet the required elements outlined in the Management Performance Requirements for Fire Operations and ensure training is completed to support delegations to line managers and principal actings.

**Park Superintendent**

The Park Superintendent is responsible to the Regional Director for the safe and efficient implementation of fire management activities within their unit, including cooperative activities with other agencies or landowners in accordance with delegations of authorities. The Park Superintendent or principal acting will meet the required elements outlined in the Management Performance Requirements for Fire Operations.

### Agency Administrator Management Performance Requirements for Fire Operations

<table>
<thead>
<tr>
<th>PERFORMANCE REQUIRED</th>
<th>NPS Director</th>
<th>Regional Director</th>
<th>Park Supt</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Take necessary and prudent actions to ensure firefighter and public safety.</td>
<td>X</td>
<td>X</td>
<td>X</td>
</tr>
<tr>
<td>2. Ensures sufficient qualified fire and non-fire personnel are available each year to support fire operations at a level commensurate with the local and national fire situation. Ensures that all training and certification of fire and non-fire personnel is completed as required to support fire operations at the local and national level.</td>
<td>X</td>
<td>X</td>
<td>X</td>
</tr>
<tr>
<td>3. Ensure Fire Management Officers (FMOs) are fully qualified as identified in the Interagency Fire Program Management Qualification Standards.</td>
<td>X</td>
<td>X</td>
<td>X</td>
</tr>
<tr>
<td>PERFORMANCE REQUIRED</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>-----------------------</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>4. Provide a written Delegation of Authority on an annual basis to individual(s) responsible for wildland fire management activities to ensure an adequate level of operational authority. Depending on park organizational structure, written delegations may be provided to the Chief Ranger, Natural Resource Specialist, FMO, designated Fire Coordinator, Park Group FMO, or to individuals from neighboring fire management organizations, provided a written agreement or memorandum of understanding is in-place. Where applicable, an Inter-park Agreement that specifies the reciprocal responsibilities of the Superintendent and Park Group FMO assigned Duty Officer, will be prepared. This Inter-park Agreement will be accompanied by an annual Delegation of Authority. Both the Delegation of Authority and Inter-Park Agreement will remain valid until rescinded by either party, updates are needed, or personnel changes necessitate a revision and update. As appropriate, the Delegation of Authority will specify multi-agency coordination (MAC) group authorities.</td>

<tbody>
<tr>
<td>5.</td>
<td>Fire Management Plans do not expire. They are considered valid until superseded by a new or revised Superintendent approved plan. Ensure applicable park unit resource management objectives are included in the Fire Management Plan (FMP). The comprehensive 7-year review of the FMP is no longer required. Annual updates are required. Then newly established FMP Update Checklist must be completed, signed by the Superintendent and uploaded in the Integrated Resource Management Application (IRMA) under the established park unit name. The new checklist can be found at <a href="https://irma.nps.gov/DataStore/Collection/Profile/3868">https://irma.nps.gov/DataStore/Collection/Profile/3868</a>. Ensure the FMP annual update is completed in advance of the fire season. The regions will determine specific deadlines. If the annual review is not completed by your regional deadline, an interdisciplinary team may need to be assembled to determine if the FMP is still adequate to support the park unit fire management program.</td>
<td></td>
<td>X</td>
</tr>
<tr>
<td>6.</td>
<td>Reviews and approves wildfire preparedness and fuels management funding based on an accurate and defensible readiness analysis. Ensure use of fire funds is in compliance with Department and Agency policies.</td>

<tbody>
<tr>
<td>30. At National Preparedness Level 4 and 5, approve the initiation or continuation of prescribed fire applications based on an assessment of risk, impacts of the proposed actions on area resources and activities and include feedback from the Geographic Area Multi-Agency Coordinating Group.</td>
<td></td>
<td></td>
<td>X</td>
</tr>
<tr>
<td>31. Serves as the Management Official (MO) within the DOI Wildland Firefighter Medical Standards Program.</td>
<td></td>
<td>X</td>
<td>X</td>
</tr>
</tbody>
</table>

#### Fire Management Staff Roles

**National Office**

The Chief, Division of Fire and Aviation (FAM Chief), NPS-NIFC, is responsible and accountable for developing policy, program direction and international coordination. The FAM Chief, along with the Branch Chiefs for Wildland Fire and Aviation, work with interagency cooperators to coordinate, reduce duplication, increase efficiencies in wildland fire management and aviation, and provide feedback to regional offices on performance requirements.

**Regional Office**

The Regional Fire Management Officer (RFMO) provides leadership for their fire and fire aviation management program. The RFMO is responsible and accountable for providing planning, coordination, training, technical guidance and oversight to the park fire management programs. The RFMO also represents the Regional Director on interagency geographic coordination groups and Multi-Agency Coordination (MAC) Groups. The RFMO provides feedback to units on performance requirements.

**Park**

The Fire Management Officer (FMO) is responsible and accountable for providing leadership for fire and fire aviation management programs at the local level. The FMO determines program requirements to implement land use decisions through the Fire Management Plan (FMP) to meet land management objectives. The FMO negotiates interagency agreements (contracting/agreements officer must review and process agreement) and represents the Agency Administrator on local interagency fire and fire aviation groups.

The Superintendent annually shall provide and update the expectations of wildland fire program leaders by means of two instruments. One is a limited Delegation of Authority that encompasses the scope of duties outlined above. The other is an Inter-park Agreement for those cases where a Park Group FMO...
or designee) handles defined duties on behalf of another NPS unit within the defined Park Group.

Fire Management Leadership Board

The Fire Management Leadership Board (FMLB) is established under the authority of the Chief, Division of Fire and Aviation Management. The purpose of FMLB is to provide leadership for the National Park Service (NPS) Wildland Fire Management Program through strategic planning and coordination to implement a safe and effective fire management program within the NPS. The FMLB will:

- Develop and implement a Wildland Fire Management Strategic Plan and
- Wildland Fire Policy;

Release Date: January 2020
• Facilitate integrating park, regional and national perspectives in support of the Wildland Fire Strategic Plan and Wildland Fire Policy;
• Develop and recommend strategic direction for long-term NPS Wildland Fire Management Program issues, policies, programs and systems, including the role of the interagency community, to meet the NPS mission;
• Develop and recommend budget priorities to the Branch Chief, Wildland Fire;
• Develop budget and financial management guidance and business rules for the NPS Wildland Fire Management Program;
• Communicate with management and leadership regarding wildland fire management program issues and needs;
• Promote/advocate integrating fire programs with other NPS programs; and
• Address recruitment/retention, succession planning and organizational efficiency.

Requirements for Fire Management Positions

All NPS employees assigned dedicated fire management program responsibilities at the park, regional or national level shall meet established interagency and NPS competencies (knowledge, skills, and abilities) and associated qualifications.

All NPS employees assigned to wildland fire management incidents will meet the training and qualification standards set by the National Wildfire Coordinating Group. Refer to Chapter 13 of the Interagency Standards for Fire and Fire Aviation Operations for specific requirements.

All wildland fires will be managed by an individual qualified and certified at the command level appropriate to the complexity level of the incident.

The qualification standards identified in the Interagency Fire Program Management Qualifications Standards will be required, in conjunction with specific agency requirements, when filling vacant fire program positions and as an aid in developing Individual Development Plans (IDPs) for employees.

Training

Training for Fire Management Officers
The following training is required for fire management officers:
• Fire Program Management, an Overview (M-581).

NPS Firefighters General Training Requirements
The following training is required for agency permanent, career seasonal and temporary firefighters:

### Structural Fire and Hazardous Materials Response

**Structural Fire Response Requirements (Including Vehicle, Trash, and Dumpster Fires)**

In order to protect the health and safety of National Park Service personnel, no employee shall be directed, or dispatched (including self-dispatching) to the suppression of structural fires, including vehicle fires, unless they are provided with the required personnel protective equipment, firefighting equipment and training. All employees must meet or exceed the standards and regulations identified in Director’s Order and Reference Manual #58, Structural Fire.

Vehicle, trash, and dumpster fires contain a high level of toxic emissions and must be treated with the same caution that structural fires are treated.

Firefighters must be outfitted with NFPA compliant structural fire personal protective clothing, including self-contained breathing apparatus. Situations exist during the incipient phase of a vehicle fire where the fire can be quickly suppressed with the discharge of a handheld fire extinguisher. Discharging a handheld fire extinguisher during this phase of the fire will normally be considered an appropriate action for any employee who has received annual fire extinguisher training. If the fire has gone beyond the incipient stage, employees are to protect the scene and request the appropriate suppression resources.
Delegation of Authority

Delegation for Regional Fire Management Officers

In order to effectively perform their duties, the RFMO must have certain authorities delegated from the Regional Director. The Delegation of Authority should include the following roles and responsibilities:

- Serves as the Regional Director’s authorized representative on Geographic Area Coordination Groups, including MAC groups.
- Coordinate and establish priorities on uncommitted fire suppression resources during periods of shortages.
- Coordinate wildland fire planning, response, and evaluation region-wide.
- Relocate agency pre-suppression/suppression resources within the region based on fire potential/activity.
- Correct unsafe fire suppression activities.
- Direct accelerated, aggressive initial attack when appropriate.
- Develop and maintain agreements to provide for the management, fiscal and operational functions of combined agency operated facilities.
- Suspend prescribed fire activities when warranted.
- Give authorization to hire Emergency Firefighters in accordance with the DOI Pay Plan for Emergency Workers.
- Approve emergency fire severity funding expenditures not to exceed the Regional annual authority.

NPS Duty Officer (DO)

All Fire Management Officers are responsible to provide DO coverage during any period of predicted incident activities. DO’s responsibilities may be performed by any individual with a signed Delegation of Authority from the local Agency Administrator. The Duty Officer may be in a location remote from the park, but will be familiar with local incident response procedures, agreements and resources. The required duties for all DOs are:

- Monitor unit incident activities for compliance with NPS safety policies.
- Coordinate and set priorities for unit suppression actions and resource allocation.
- Keep Agency Administrators, suppression resources and Information Officers informed of the current and expected situation.
- Plan for and implement actions required for future needs.
- Document all decisions and actions.

DOs will provide operational oversight of these requirements as well as any specific duties assigned by fire managers through the fire operating plan. DOs will not fill any ICS incident command functions connected to any incident. In the event that the DO is required to accept an incident assignment, the FMO will ensure that another authorized DO is in place prior to the departure of the outgoing DO.
Engine Operating Standards

Current direction on the NPS Fire and Aviation vehicle program is at the NPS Fire Operations SharePoint site http://famshare.inside.nps.gov/wildlandfire/operations/fleetandfacilities/default.aspx.

Vehicle Color and Marking

Vehicles dedicated to wildland fire activities shall be white in color and have a single four-inch wide red reflective stripe placed according to NFPA 1906 (NFPA 1906 8.8.3, 2006 edition). The word “FIRE” red with white background color will be clearly visible on all four sides of the vehicle. The NPS Arrowhead will be placed on the front doors. The size and placement of the Arrowhead will be as specified in RM-9. An identifier will be placed on the vehicle according to local zone or GACC directions. Roof numbers will be placed according to local zone procedures.

Engine Module Standards

If no ENGB is assigned, then the apparatus is designated as a Patrol or Prevention vehicle, not as an Engine.

<table>
<thead>

</tr>
</tbody>
</table>

* At least one of which is FFT1 and ICT5 qualified.
** An ENGB is required for mobilization.
*** If the Water Tender is operated without an ENGB then it may only fill Non-Tactical missions as described in Chapter 14.

- Engines with four or more personnel assigned will always have a qualified engine operator (ENOP) in addition to an ENGB.
- Additional personnel may be requested by the ordering unit and/or added by the filling unit for mobilization.

Lights and Siren Response

Responding to wildland fire incidents normally does not warrant the use of emergency lights and siren on public roads by calling for or blocking the right-of-way from other traffic in order to safely and effectively perform the NPS mission. However, there may be rare and extenuating circumstances when
limited use of emergency lights and siren is appropriate and necessary due to an immediate threat to life.

Those units that determine an emergency lights-and-siren response on public roads is necessary to meet mission requirements must develop an operating plan that ensures the following:

1. All vehicles (command, engines, etc.) will be properly marked, equipped, and operated in accordance with state statutes, codes, permits and NPS requirements.
2. Drivers will complete training in the proper use of lights and siren response in accordance with National Fire Protection Association (NFPA) 1451 Standard for a Fire Service Operations Training Program and 1002 Standard for Fire Apparatus Operator/Driver Professional Qualifications, as well as any state requirements.
3. Instructors of lights and siren training must have successfully completed lights and siren training as part of a federal engine academy, and Emergency Vehicle Operators Course (EVOC) and a facilitative instructor course.
4. Drivers responding with emergency lights and sirens will be minimally qualified as engine operator.
5. Lights and sirens will meet NFPA and state code requirements.
6. Drivers will stop at all controlled intersections (sign, light, traffic officer) before proceeding; drivers will stop or reduce speed as circumstances dictate prior to proceeding through any uncontrolled intersections.
7. Traffic light changing mechanisms (e.g., Opticons) will only be used under formal written agreement with state and local governments. They will be used only when they are necessary to create safe right-of-way through urban high-traffic areas. All pertinent state and local statutes and procedures will be adhered to.

Vehicle Maintenance, Repairs and Replacement

Daily preventative maintenance checks, regular servicing, and prompt repairs, and lifecycle replacement are critical to providing mission readiness, performance, and safe operation.

Annual Safety Inspections, Scheduled Maintenance, and Daily Inspections

It is required to complete and document annual safety inspections, regularly scheduled preventative maintenance and daily (or pre-trip) inspections for all NPS wildland fire vehicles. Annual safety inspections must be documented on Form 1520-35. Regularly scheduled preventative maintenance, unscheduled maintenance and repairs for interior owned (I-plate) vehicles is recorded in FBMS. Daily inspections must be recorded in the FEMPR (Fire Engine Maintenance Procedure and Record).
The cost of all vehicle repairs and maintenance is the responsibility of the individual parks unless the damage is directly attributable to operations on a wildfire. In that case, with approval from the IC, the damages may be paid for under the fire’s suppression account.

Wildland fire vehicles that are not operationally sound or have safety deficiencies must not be put into service. In addition, vehicles that suffer from mechanical or safety issues while en route or on assignment must be taken out of service at the earliest opportunity in which it is safe to do so and must not be put back into service until corrective action can be completed.

**Fixed Ownership Rates (FORs)**

FORs are fees that are paid into the WCF annually for each vehicle in the program. These fees continue to accumulate over the life of a vehicle and are used to replace the vehicle at the end of its life cycle. The FOR is adjusted annually by the WCF manager to reflect changes in input parameters.

**Equipment Bulletins and Equipment Alerts**

The NPS mirrors the Bureau of Land Management (BLM) two-level Equipment Bulletin (EB) and Equipment Alert (EA) System. The purpose of the system is to share accurate and timely information regarding potential equipment problems and/or needed repairs. The EB is primarily intended to inform the equipment users of recommendations for repairs, potential hazards, or general information related to the overall maintenance, awareness, and safe operation of fire equipment. The EA is time sensitive and addresses potentially serious hazards or risks. The alert includes a specific action that the user must act upon.

Unexpected issues involving wildland fire vehicles which do not fall under other types of wildland fire reviews and investigations and/or other applicable federal, state or specific agency requirements must be reported. If an unexpected vehicle issue warrants an EB or EA it is issued by the National Fire Equipment Program Manager through the Operations Advisory Team and the Capital Equipment Committee. Members of these groups must ensure the information reaches all levels of the organization.

**NPS Firefighter Target Physical Fitness Standards**

These are voluntary targets. They are not mandatory. These targets are established to provide NPS firefighters a common standard against which to gauge their physical fitness level. NPS firefighters are encouraged to meet or exceed these standards.

<table>
<thead>
<tr>
<th>Fitness Activity</th>
<th>Age 18-29</th>
<th>Age 30-39</th>
<th>Age 40-49</th>
<th>Age 50 and Up</th>
</tr>

<tr>
<td>6,000 - 7,000</td>
<td>Add 40 seconds</td>
</tr>
<tr>
<td>7,000 - 8,000</td>
<td>Add 50 seconds</td>
</tr>
</tbody>
</table>

**National Fire Operations Fitness Challenge**

The national fire operations fitness challenge encourages and recognizes achievement in physical fitness by NPS firefighters. The fitness challenge provides a common system by which NPS firefighters can measure current fitness, establish fitness goals, and track fitness improvement. The fitness challenge is voluntary, but NPS firefighters are encouraged to participate. The fitness challenge tests participants in four basic exercises - push-ups, pull-ups, sit-ups and a timed run of 1.5 miles. Test results are compiled into a final overall score. Unit and Regional offices are encouraged to support and recognize achievement in firefighter fitness. Specific information on the fitness challenge is located at https://www.nifc.gov/training/trainingFitness.html.

**Wildland Fire Uniform Standards**

The Service-wide Uniform Program Guideline (DO-43) sets forth the service-wide policies and associated legal mandates for wearing the NPS uniform and for authorizing allowances to employees.

The guideline states that superintendents administer the uniform program within their areas and are responsible for developing and communicating local uniform and appearance standards in accordance with DO-43, determining who will wear the uniform and what uniform will be worn and enforcing uniform and appearance standards. Three options exist for uniforms for wildland fire personnel:

- Within the context of the uniform standards, if the conventional NPS uniform is identified at the local level as required for specified fire management staff, fire program management funds may be used to support uniform purchases in accordance with allowance limits identified in DO-43.
- While Nomex outerwear (i.e., shirts, trousers, brush-coats) routinely issued as personal protective equipment has become recognized as the uniform of the wildland firefighter as a matter of necessity, these apparel also have justifiable utility as a uniform standard at the park level for certain fire and/or ONPS base-funded wildland fire staff.
• When the conventional NPS uniform or the full Nomex outerwear is not appropriate or justified, local management with park superintendent approval may establish a predetermined dress code for fire staff. The goals of the NPS uniform program can appropriately be applied (with common sense) to this departure from the norm.

• The DOI Boot Policy is referenced in Chapter 7.

• The fire management officer is responsible for establishing a reasonable allotment schedule for new or returning employees, commensurate with supplies provided in previous seasons. A suggested per person issuance is three to four tee shirts, one ball cap, and one sweatshirt (where appropriate). $100 would normally be adequate to cover costs of this issuance.

Where appropriate and justified, fire funds may be applied to the purchase of 100 percent cotton tee shirts, sweatshirts, and ball caps, with appropriate logo and color scheme, to augment the Nomex outerwear worn in conjunction with project or wildland fire management incidents. Nomex outerwear will usually be returned to the park’s fire cache based on the tour of duty (end of season, transfer to another park, etc.).

Just as with uniform allowance discussed in DO-43, the intent of fire-funded purchases is to defray the cost of the appropriate apparel, not necessarily to cover the cost of all items. This will not only be factored into the quantities deemed necessary for the individual, but would also preclude fire-funded purchases of fleece jackets, rain gear and other personal items generally considered the responsibility of those employees not covered by the NPS uniform program. Exceptions to this should be well-justified and documented.

Fire Management Credentials
The NPS Fire and Aviation Management Credential Program is currently suspended and undergoing a review.

NPS Use of WFDSS
The internet-based WFDSS will be the primary decision support documentation platform for all NPS wildfires. Refer to Chapter 11 of the Interagency Standards for Fire and Fire Aviation Operations for further guidance.

National Park Service Specific Qualifications and Qualifications Exceptions
Park superintendents who have potential wildland fire response in their park, their designated acting superintendents, and supervisors of fire management officers (FMOS) must attain and maintain the Agency Administrator (AADM) qualification in the Incident Qualifications and Certification System (IQCS). The qualification must be attained within two years of appointment to the positions listed above. Requirements for the AADM qualification may be found in the Federal Wildland Fire Qualifications Supplement hosted at ### https://www.nwcg.gov/publications/310-1 https://iqcsweb.nwcg.gov/.
Chapter 4

U.S. Fish and Wildlife Service Program Organization and Responsibilities

Introduction

This document states, references, or supplements policy for the U.S. Fish and Wildlife Service (Service or FWS) Wildland Fire Management Program. The standards provided in this document are based on current U.S. Department of the Interior (DOI) and Bureau policy, and are intended to provide fire program guidance. If there is a discrepancy between guidance found in this document and the Service Manual, information contained within this document will be considered authoritative as updates occur on a more frequent cycle than the Service Manual. The intent is to ensure safe, consistent, efficient, and effective fire and aviation operations. This document will be reviewed and updated annually.

Agency Administrator Roles

Director

The Director of the Fish and Wildlife Service has overall responsibility for the Service’s Wildland Fire Management Program. The Director will ensure regional fire management activities are formally evaluated.

Chief, National Wildlife Refuge System

The Chief of the National Wildlife Refuge System (NWRS) under the Chief provides leadership for the Wildland Fire Management Program. The Chief also formally evaluates all regional fire activities as needed. The Assistant Director of the National Wildlife Refuge System NWRS has delegated the authority to approve the Service Fire Management Handbook and other fire related handbooks as needed to provide guidance to the Chief, Branch of Fire Management.

Regional Director

The Regional Director is responsible to the Director for fire management programs and activities within their region. The Regional Director will meet the required elements outlined in the Management Performance Requirements for Fire Operations and ensure training is completed to support delegations to line managers and principal acting’s acting’s. The Regional Director ensures that Refuge Managers/Project Leaders, and or Field Supervisors are qualified to approve prescribed fire plans. Any prescribed fire that: 1) is converted to a wildfire; 2) is issued a Notice of Violation for air quality; or 3) damages values off of Service lands, must be reviewed. The appropriate level and scope of the review will be determined by agency policy. The final review results shall be provided to the Regional Director within 45 days of the incident out date.
For USFWS declared wildfire reviews, regardless of level; a draft copy of the final report will be submitted to the agency’s National Fuels Management Specialist within 45 days of the fire being declared out, prior to signatures. After which, the National Fuels Management Specialist will work with appropriate regional staff to finalize the report for signature. Once finalized, signatures must include, at a minimum: 1) preparer(s), 2) the Zone Fire Management Officer (reviewed by), and 3) appropriate level agency administrator (approved by). Additional signatories may be added as desired.

Once signatures are obtained, the National Fuels Management Specialist will submit the final report to the Wildland Fire Lessons Learned Center (LLC) after approved by the Chief, Branch of Fire Management. The Branch of Fire Management will then notify Regional Fire Management Coordinators that it is available to facilitate additional learning.

Regional Directors will provide a written Delegation of Authority to the Regional Fire Management Coordinator (RFMC) to represent the region on the Geographic Multi-Agency Coordinating Group (GMAC) and perform other duties as described in this chapter under the heading “Delegation of Authority.”

Regional Chief and Refuge Supervisors
Regional Chiefs and Refuge Supervisors are delegated specific leadership responsibilities by the Regional Director. They provide oversight and direction, in coordination with, the Wildland Fire Management Program for the National Wildlife Refuge System NWRS. These responsibilities occur through established lines of authority as assigned by the Regional Director.

Project Leader/Refuge Manager
The Project Leader/Refuge Manager is responsible for the safe and efficient implementation of fire management activities within their unit, including cooperative activities with other agencies or landowners, in accordance with delegations of authorities. The Project Leader/Refuge Manager, or principal acting, will meet required elements outlined in the Management Performance Requirements for Fire Operations table below.

- If an Agency Administrator is absent during an incident, the Refuge Supervisor and RFMC will make an assessment of the Acting Agency Administrator’s capabilities and provide appropriate additional support. The Refuge Supervisor and RFMC will provide additional fire management support for the affected refuge as needed.

</table>

## Prescribed Fire/Fuels Management

21. Ensure compliance with National and Regional policies for prescribed fire activities. Conduct periodic reviews of the prescribed fire program.

22. Ensure all wildfires resulting from prescribed fire actions are reported to Regional Director within 24 hours of the wildfire declaration.

23. In the event of a declared wildfire from an escaped prescribed fire, conduct and submit Declared Wildfire Review to National Office within 45 days of wildfire out date.
CHAPTER 4  FWS PROGRAM ORGANIZATION AND RESPONSIBILITIES

24. Ensure Prescribed Fire Plans have been reviewed and recommended by a qualified technical reviewer other than the plan author.

25. Review and approve the Agency Administrator Ignition Authorization.

Fire Management Staff Roles

National Office

Fire Director

The Fire Director is the Chief of the Fire Management Branch (FMB) in the National Wildlife Refuge System (NWRS), and is the Service representative at the National Interagency Fire Center (NIFC). The Fire Director, through Service Manual 621 FW 1, is delegated authority by the Director to represent the Service on the National Multi-Agency Coordinating Group (NMAC Group). The Fire Director is responsible for implementing the decisions of the NMAC as they affect U.S. Fish and Wildlife Service areas. The decisions of the NMAC include the prioritizing of incidents nationally and the allocation or reallocation of firefighting resources to meet national priorities.

The Fire Management Branch is responsible for providing technical direction and coordination of fire management planning, policy development, and procedures Service wide.

Regional Office

Regional Fire Management Coordinator (RFMC)

The Regional Fire Management Coordinator provides leadership, direction, coordination, training, planning, evaluation, and technical guidance for the region and is available to provide assistance for intra-agency and interagency wildland fire management needs. The RFMC will meet qualification requirements established by IFPM for the position. The RFMC, through written delegation by the Regional Director, is delegated authority to represent the region on the GMAC. The RFMC is responsible for implementing the decisions of the GMAC Group as they affect U.S. Fish and Wildlife Service areas. The decisions of the GMAC include the prioritizing of incidents, Interagency Master/statewide agreements and the allocation or reallocation of firefighting resources to meet wildland fire management priorities.

Refuge
Zone Fire Management Officer (ZFMO)
The ZFMO is responsible and accountable for providing leadership for the fire management program. The ZFMO determines program requirements to implement land use decisions through the FMP to meet land management objectives. The ZFMO negotiates interagency agreements and as delegated, represents the Agency Administrator on local interagency fire and fire aviation groups. The ZFMO is responsible for coordinating with Agency Administrators to annually review and update (as required) their respective Fire Management Plans to comply with agency policy.

**Prescribed Fire and Fuels**

| 33. Ensures compliance with Service, Regional, and/or local policies for prescribed fire activities. Provides periodic reviews of the prescribed fire program. | X | X | X |
| 34. Reports all wildfires resulting from prescribed fires to the Regional Fire Management Coordinator within 12 hours of the wildfire declaration. | | | X |
| 35. ### A draft copy of the final report will be submitted to the agency’s National Fuels Management Specialist within 45 days of the fire being declared out, prior to signatures. | | | X |

---

**National Fire Leadership Team**

The National Fire Leadership Team (NFLT) is established under the guidance and support of the NWRS Leadership Team. The team is established to provide regional input on issues of National importance, to advise the Chief, FMB, and provide leadership, coordination, and guidance in the development and implementation of a safe and effective fire management program within the Service. The team serves as a national clearing house, provides discussion of wildland fire management issues, and recommends actions to improve coordination and integration of regional fire management activities into national direction. The team will be responsible for the following:

- Provide leadership, coordination, and guidance for the Service’s fire management program.
- Identify potential fire management issues, and recommend strategies that will enhance the Service’s ability to safely and effectively manage fire on Service lands.
- Develop and recommend common guidance and business rules as needed to manage fire management activities while recognizing individual regional needs.
- Provide a forum for the exchange of ideas, best management practices, and lessons learned relating to Service fire management activities.
- Provide a forum to discuss budget methodology applications that are consistent with appropriation language authority as well as providing for the...
collaboration and coordination within FWS and with our interagency
partners.
• Form task groups, working teams, or other collections of subject matter
experts as needed to deal with specific tasks or long-term issues. These
groups or teams will each have a Leader who usually works in the subject
matter area with members assigned who may have the subject area as a
collateral duty. They will have representation from across the Service, and
will provide guidance or operational recommendations to the NFLT.

Line Officer Team (LOT)
The Line Officer Team (LOT) consists of representatives from each Region and
each level of the National Wildlife Refuge System (NWRS). Their primary
responsibility is to advise and promote a safe, effective and integrated fire
management program in the NWRS.

Delegation of Authority

Regional Fire Management Coordinator
In order to effectively perform their duties, an RFMC must have certain
authorities delegated from the Regional Director. This delegation is normally
placed in the regional office supplement to agency manuals. This Delegation of
Authority should include:
• Serve as the Regional Director’s authorized representative on geographic
area coordination groups, including MAC groups.
• Coordinate and establish priorities on uncommitted fire suppression
resources during periods of shortages.
• Coordinate logistics and suppression operations region-wide.
• Relocate agency wildland fire resources within the region based on relative
fire potential/activity.
• Correct unsafe wildland fire activities.
• Enter into agreements to provide for the management, fiscal, and
operational functions of combined agency operated facilities.
• Suspend prescribed fire activities when warranted.
• Give authorization to hire Emergency Firefighters (EFF) in accordance with
the DOI Pay Plan for Emergency Workers.
• Approve short-term fire severity funding expenditures not to exceed the
region’s annual authority.

Zone Fire Management Officer (ZFMO)
In order to effectively perform their duties, the ZFMO will receive a Delegation
of Authority outlining the operational and administrative fire management
duties. All Unit Agency Administrators within a Zone will sign a Zone and/or
Refuge Fire Management delegation. A sample Delegation of Authority can be
found on the FWS Fire Operations Policy and Guidance SharePoint site.
Inter-refuge Agreements

Inter-refuge Agreements may be used when ZFMOs provide fire management oversight to multiple refuges. This is in addition to the Delegation of Authority from the Project Leaders/Refuge Managers to the ZFMO, and further defines the roles and expectations between the ZFMO and Refuges. An example can be found on the FWS Fire Operations Policy and Guidance SharePoint site.

Fire Duty Officer

Fire Management Officers are responsible to provide Fire Duty Officer (FDO) coverage during periods of predicted incident activities. FDO responsibilities may be performed by any individual delegated the authority, either written or verbal, from the ZFMO. The duties for FDOs include:

- Monitor unit incident activities for compliance with FWS safety policies.
- Coordinate and set priorities for unit preparedness activities, incident response and resource allocation.
- Keep Agency Administrators and resources informed of the current and expected situation.
- Plan for and implement actions required for future needs.
- Document decisions and actions.
- FDOs will not fill Incident Command System (ICS) functions. If the FDO needs to fulfill an ICS function, they must re-assign the FDO duties.

Wildland Fire Field Attire

Wildland fire field attire will be worn by primary preparedness funded personnel on all duty days during the predetermined “fire season” for the home unit in accordance with their approved step-up plan.

Fire Severity Funding

Service specific fire severity funding guidance can be found in Chapter 10 of the Interagency Standards for Fire and Fire Aviation Operations (NFES 2724) this guide, Chapter 10 of the Service Fire Management Handbook, and the Fire Business Guide, Severity Subactivity.

Fire Reporting

Field units will report wildland fire occurrence and fire status to their local dispatch office and Regional Fire Management Coordinator or designee.

Individual Fire Report

An Individual Fire Report must be completed in the Fire Management Information System (FMIS) for the following types of fires or treatments within 15 days after the fire is declared out or treatment is complete:

- All wildland fires on Service lands;
- Support actions;
CHAPTER 4  FWS PROGRAM ORGANIZATION AND RESPONSIBILITIES

- Fires suppressed on other lands under an agreement;
- All false alarms;
- Natural outs (by natural out definition); and
- Non-fire treatments completed with fuels funding.

Detailed information about a support action is only required from an initial entry into FMIS to establish a work breakdown structure (WBS). Once the WBS has been established, users are not required to establish additional fire reporting information for the same fire.

Reports are required regardless of who takes action, e.g., force account, cooperator, or contractor. When actions are taken on a cooperative fire, the agency having jurisdiction over the land on which the wildfire occurs will file a complete report to record and bill for assistance when necessary.

Fish and Wildlife Service Use of WFDSS

FWS follows interagency policy regarding use of WFDSS. Standards for when WFDSS will be used are found in Chapter 11 of the Interagency Standards for Fire and Fire Aviation Operations this guide.

Documentation of all other wildfires in WFDSS is at the discretion of the Regional Office or local unit. All fires in Alaska will have WFDSS initiated by the Protecting Agency.

Final Wildland Fire Record

The final wildland fire or project record may include the following:
- FMIS data entry (required)
- Narrative
- WFDSS analyses and decisions
- Incident Action Plan(s)
- Daily weather forecasts and spot weather forecasts
- Cumulative fire map showing acreage increase by day Daily fire progression map
- Total cost summary
- Monitoring data (Wildland Fire Observation Records)
- Critique of fire projections on Incident Action Plan

Physical Fitness and Conditioning

Employees serving in wildland fire positions that require a fitness rating of arduous as a condition of employment are authorized one hour of duty time each work day for physical fitness conditioning. Employees not having a fitness rating of arduous as a condition of employment, but who are required by a Critical Performance element or other written agreement to maintain an arduous level, will be authorized three hours per week of duty time for physical fitness conditioning. All other wildland firefighting personnel holding
qualifications requiring ratings of moderate or arduous may be authorized, by their supervisor, up to three hours per week of duty time for fitness conditioning. Prior to any duty time being allowed for physical fitness conditioning, employees and supervisors must agree, in writing, what physical conditioning activities the employee will engage in, and when and where they will occur. Activities outside of the agreement will not be authorized or allowed. A combination of activities designed to increase both physical strength and aerobic fitness, while minimizing the possibility of physical injury, should be utilized.

**National Fire Operations Fitness Challenge**
The national fire operations fitness challenge encourages and recognizes achievement in physical fitness by FWS firefighters. The fitness challenge provides a common system by which FWS firefighters can measure current fitness, establish fitness goals, and track fitness improvement. The fitness challenge is voluntary, but FWS firefighters are encouraged to participate. The fitness challenge tests participants in four basic exercises - push-ups, pull-ups, sit-ups and a timed run of either 1.5 miles or 3 miles. Test results are compiled into a final overall score.

Unit and Regional offices are encouraged to support firefighter participation. Individual accomplishments can be forwarded to the national office for employee recognition by the Branch Chief. Specific information on the fitness challenge is located at [https://sites.google.com/a/fws.gov/fws-fire-employee-development/home/fitness-challenge](https://sites.google.com/a/fws.gov/fws-fire-employee-development/home/fitness-challenge) and [https://fishnet.fws.doi.net/regions/9/nwrs/fire/Shared%20Documents/Memo's%20From%20The%20Branch/FY19/FWS%20National%20Fitness%20Challenge_2.15.19.pdf](https://fishnet.fws.doi.net/regions/9/nwrs/fire/Shared%20Documents/Memo's%20From%20The%20Branch/FY19/FWS%20National%20Fitness%20Challenge_2.15.19.pdf).

**Training**

**Agency Administrator Training**
The qualification standards identified in the *Interagency Fire Program Management Qualification Standards* are required, in conjunction with specific agency requirements, when filling vacant fire program positions, and as an aid in developing Individual Development Plans (IDPs) for employees.

- Refuge Managers/Project Leaders with Service lands under their jurisdiction which require the development and maintenance of a Fire Management Plan must attend *Fire Program Management, an Overview* (M-581), or may upon concurrence of the RFMC, attend the Prescribed Fire Workshop for Agency Administrators offered by the National Interagency Prescribed Fire Training Center.
- Projects leaders/refuge managers who oversee or have the potential to oversee complex fire management programs should consult with their RFMC about attending *Fire Program Management, Leading Complex Fire Programs* (M-582).
• Field supervisors who may approve prescribed fire plans must attend *Fire Program Management, an Overview* (M-581), or may upon concurrence of the RFMC, attend the Prescribed Fire Workshop for Agency Administrators offered by the National Interagency Prescribed Fire Training Center.

• Regional Chiefs, Regional Refuge Supervisors, and Refuge Managers/Project Leaders must complete periodic refresher training as determined by their supervisor in consultation with the RFMC. Refresher training options may include attending fire management training/workshops, trainee experiences, or mentoring.

• Guidance for use of the agency qualification for Agency Administrators (AADM) can be found in the *Federal Wildland Fire Qualifications Supplement*.

### Zone Fire Management Officer Training

All ZFMOs are required to attend the M-581, *Fire Program Management, an Overview* course, either as a student or as a member of the instructor cadre. If attending as an instructor, the ZFMO must be present for the entire course. See IFPM requirements.

1. **Administratively Determined (AD) and EFF Required Training**
   - First Aid/CPR (every 2 years)
   - Defensive driving (every 3 years)

2. **Fish and Wildlife Service Specific Qualifications**
   - Guidance regarding agency-specific qualifications that are not contained in the National Incident Management System (NIMS) Wildland Fire Qualifications Guide (NWCG) can be found in the Federal Wildland Fire Qualifications Supplement. For qualifications with agency standards which exceed minimums established in the PMS 310-1, refer to the Service Fire Management Handbook.

3. **FWS Global Positioning System (GPS) Datum and Coordinate Format Standard**
   - To ensure safe and efficient suppression operations, all FWS fire resources will use a standard GPS datum and latitude/longitude (coordinate) format when communicating GPS references. The standard datum is WGS84, and the standard coordinate format is Degrees Decimal Minutes (DDM). For other activities (e.g., mapping, fire reporting, planning), agency standards will apply.
Chapter 5
USDA Forest Service Wildland Fire and Aviation Program
Organization and Responsibilities

Introduction

This document is intended to be a program reference guide that documents the standards for operational procedures and practices for the USDA Forest Service Fire and Aviation Management program. The standards provided in this handbook are based on current agency and interagency wildland fire management policy, and are intended to provide fire and aviation program guidance, and to ensure safe, consistent, efficient, and effective fire and aviation operations. This document will be reviewed and updated annually.

Vision and Objectives for Fire Management

The vision of the Forest Service’s Fire and Aviation Management program is to safely and effectively extinguish fire, when needed; use fire where allowable; manage our natural resources; and as a Nation, live with wildland fire. The following objectives support this vision:

• Risk Management and Risk Reduction – Assure management of risk to people, communities and natural and cultural resources is the fundamental principle used to make informed decisions in all fire management programs. Minimize the risk to people, communities and natural and cultural resources by assessing the potential benefits of actions, severity of concerns, and probabilities of occurrences to reduce risk.

• Ecological – Meet the Forest Service mission through the use of fire management programs to protect people and communities, conserve natural and cultural resources, and maintain and restore ecological health.

• Collaboration – Implement the wildland fire management program through collaboration and partnerships.

• Learning – Learn from science, and ours and our partners’ experiences, to improve fire management programs.

• Empowerment – Employees are expected and empowered to be creative and decisive, to exercise initiative and accept responsibility and use their training, experience, and judgement to implement the agency’s mission.

Foundational Doctrine

The vision of the Forest Service’s Fire and Aviation Management program is to use a doctrinal approach based on leadership, operations and risk management. To support this vision, Forest Service policy is to:

• Take all response actions to ensure the safety of firefighters, other personnel, and the public regardless of cost or resource loss; no resource or facility is worth the loss of human life.
• The intent of wildfire response is to protect human life, property, and achieve protection and natural resource management objectives established in Land and Resource Management Plans.

• Leadership principles are the foundational doctrine on which fire and aviation management operations will be based (Leading in the Wildland Fire Service, NWCG PMS 494-2).

A doctrinal approach goes beyond strict compliance with procedural rules, and promotes risk-based application of wildland fire management principles to improve decision making and firefighter safety. Foundational doctrine has been codified in Forest Service Manual 5100 direction and will guide fundamental wildland fire management policy, practices, behaviors, and customs to be mutually understood at every level of command.

Under this doctrinal approach:

• Employees are expected and empowered to be creative and decisive, to exercise initiative and accept responsibility, and to use their training, experience, and judgment in decision-making to carry out their leader’s intent.

• Employees are expected and empowered to make reasonable and prudent decisions to accomplish the agency mission while minimizing unnecessary risk.

Mission

• The Forest Service is prepared and organized to support national and international emergencies with trained personnel and other assets when requested.

• Agency employees respond when they come across situations where human life is immediately at risk or there is a clear emergency, and they are capable of assisting without undue risk to themselves or others.

• Support for local fire emergencies takes priority over accomplishment of local resource targets. Support of non-local fire emergencies will be at the discretion of the local line officer, as bounded by agency agreements and Regional or National direction.

• A cooperative relationship between the Forest Service and other agencies is essential. The Forest Service is committed to honor its part of the joint responsibility to develop and maintain effective working relationships with its intergovernmental cooperators.

Wildland Fire Response Principles

• Response to wildland fire is based on the ecological, social, and legal consequences of fire. The circumstances under which a fire occurs, and the likely consequences to firefighter and public safety and welfare, natural and cultural resources, and values to be protected dictate the appropriate management response to fire.
Response to wildfire in the Wilderness focuses on the natural ecological role of fire and activities are conducted in a manner compatible with overall wilderness management objectives (see FSM 2320).

Success is achieving reasonable objectives with the least firefighter risk necessary while enhancing stakeholder support for our management efforts.

Leadership and Accountability
- All levels of leadership must communicate a clear vision of Agency goals and management principles, ensuring they are shared and understood by all levels of the organization.
- All levels of leadership must express clear intent concerning roles and responsibilities to ensure wildfire response assignments are appropriate, risk-based and effective.
- Leaders regularly monitor operations for safety, efficiency and effectiveness, and take action when there is recognition of exceptional or problematic employee performance.

The Operational Environment
Risk Management
The wildfire response environment is complex and possesses inherent hazards. It should be recognized that even with reasonable risk mitigations responses can result in harm to firefighters.
- The Forest Service is committed to the aggressive management of risk.
- Apply a risk management process to minimize unnecessary risk in wildfire response while maximizing the opportunities to achieve management objectives.
- Maintaining state of the art decision support systems based on the best available science is essential for making sound decisions on how to manage all wildland fire to achieve Land and Resource Management Plan objectives, including public and Agency personnel safety.
- The Forest Service guide to Operational Risk Management and other helpful Risk Management resources can be found on the USDA Forest Service website for Operational Risk Management.

Operations
Every wildfire response operation is directed toward clearly-defined, decisive, and obtainable objectives.

Wildfire Response
- When it is time to engage a wildfire, do so in a manner that is appropriate, risk-based, and effective.
- Command and control will be decentralized to cope with the unpredictable nature of wildfire. To achieve leader’s intent and accomplish operational
objectives, subordinate commanders must make decisions on their own
initiative, and coordinate their efforts to maintain unity of effort.

- Judgement in combination with principles and rules will guide wildfire
response practices and actions.
- Rapid deployment and appropriate concentration of wildfire response
resources at the decisive time and place are essential to successful wildfire
response actions.
- Maintaining a high capability to ensure effective initial attack is essential to
public and firefighter safety, accomplishment of management objectives,
and cost containment.
- The interdependence of wildland fire jurisdictions requires the
collaborative, proactive engagement of cooperators, partners, and the public
in response activities.

Risk Management Protocol

Forest Service Risk Management Protocol begins with working with partners
and stakeholders to identify values affected by fire (positively and negatively)
and then forming clear and reasonable objectives around these values. The
highest value is human life and thus the primary objective will always be
protection of human life. Other objectives will be weighed against the amount of
risk responders and the public must accept in order to accomplish the objectives
as well as the likelihood of success. The Forest Service is committed to using a
three phased risk management protocol:

I. Pre-season
Pre-season preparedness work is critical to success when the fire starts.
- Build decision maker and key stakeholder capacity to manage the
uncertainties and inherent risks of fires.
  - Increase understanding of risk management with key stakeholders and
    partner agencies.
  - Build Agency Administrator capacity to perform as risk managers.
- Assess risk at a landscape level, looking at National Forest System (NFS)
  lands and those adjoining lands that may be impacted by a fire leaving NFS
  land.
  - Develop a common understanding of values to be protected by
    answering four questions; ‘What is important?’ ‘Why is it important?’
    ‘Who is it important to?’ and ‘How important is it?’
  - Complete a risk analysis, with key stakeholders and partner agencies, to
    predetermine the optimal response strategies for protecting values at
    risk. Engage key stakeholders and partner agencies in tabletop
    exercises or other venues to ensure alignment.
  - Initiate dialogue with line officers and stakeholders aimed at
    understanding, acceptance, and support for alternative risk-based
    decisions. This is especially important where there is an expectation
    that a fire will become a long-term event, because of an opportunity to
II. During Incident Phase

During incident phase focuses on a Seven (7) Step Risk Management Process:

1. Complete an incident risk assessment.
   * Develop an assessment of what is at risk (from preseason work or input from key stakeholders), and the associated probabilities and potential consequences.

2. Complete a risk analysis.
   * Consider alternatives (objectives, strategies and tactics) against desired outcomes, risks to human life (responders and the public), probability of success and values to be protected.

3. Complete two-way risk communications.
   * Engage community leaders, local government officials, partners, and other key stakeholders of the incident to share the risk picture and enlist input.

   * Engage appropriate senior line officers and political appointees (as necessary) regarding the potential decision aimed at obtaining understanding, acceptance, and support for the alternatives and likely decision.

5. Make the risk-informed decision.

6. Document the risk: assessment, analysis, communication, sharing and decision in WFDSS.

7. Continue monitoring and adjusting as necessary or as conditions change.

III. Post Incident Phase

As a learning organization we should always strive to improve how we conduct our business. We should endeavor to learn from each incident and apply those lessons.

* Complete an incident after action review.
  • Engage key stakeholders of the incident to be involved.
  • Review what worked, what did not work and suggestions for improvement.

* Conduct a peer review after action process.
  • Engage others who have had similar incidents to learn strategies for improvement.

* Implement plans for improvement.
  • Make use of lessons learned in real-time if possible.

The following Risk Assessment and Risk Decision questions are designed to inform fire management decisions by stimulating thinking and prompting dialogue, analyzing and assessing risk, and recognizing shared risks and communicating those risks within the Agency and with partners and stakeholders.

- Risk Assessment
1. What are the critical values at risk?
2. What is the chance the critical values will be impacted, and if so what are the consequences?
3. What are the opportunities to manage fire to meet land management objectives?
4. What are the possible low probability/high consequence events?
5. Who are the stakeholders that should be consulted prior to making a decision?

- Risk Decision
  1. What alternatives (objectives, strategies, and tactics) are being considered?
  2. What is the relative exposure of responders for the alternatives being considered (exposure in terms of numbers of responders needed, amount of time (days) of commitment needed to accomplish the objectives and the amount and types of risks these responders will be asked to accept if the alternative is chosen)?
  3. What is the relative probability of success associated with the alternatives being considered?
  4. What alternative provides for the best balance between the desired outcome and risk to responders?
  5. What are the critical thresholds that will trigger reconsideration of the proposed alternative and how will they be monitored?

**Specific Line Officer Responsibilities for Fire and Aviation at the Field Level**

The Forest Service has developed core fire management competencies for Line Officers with oversight responsibilities over fire management programs. They are presented here for reference:

- Knowledge of fire program management including ability to integrate fire and fuels management across all program areas and functions;
- Ability to implement fire management strategies and integrate natural resource concerns into collaborative community protection and ecosystem restoration strategies;
- Knowledge to oversee a fire management program including budget, preparedness, prevention, suppression, and hazardous fuels reduction;
- Ability to serve as an Agency Administrator exercising authority to initiate prescribed fire and other hazardous fuel reduction activities;
- Ability to serve as an Agency Administrator during an incident on an assigned unit; and
- Ability to provide a fully staffed, highly qualified, and diversified firefighting workforce that exists in a “life first” and “readiness” environment.
Responsibilities

- Line Officers are responsible for all aspects of fire management.
- Integrate fire and fuels management across all functional areas.
- Implement fire management strategies and integrate natural resource concerns into collaborative community protection and ecosystem restoration strategies on the unit.
- Manage a budget that includes fire preparedness, prevention, suppression, and hazardous fuels in an annual program of work for the unit.
- Perform duties of Agency Administrator and maintain those qualifications.
- Provide a fully staffed, highly qualified, and diverse workforce in a "safety first" environment.
- Support and participate in wildfire prevention.
- Ensure operational fire management responsibilities remain separated from agency administrator responsibilities in order to avoid collateral duty conflicts.

These responsibilities are based on current policy and provide program guidance to ensure safe, consistent, efficient, and effective fire and aviation operations.

Preparedness

Preparedness is a continuous process that includes all fire management activities conducted in advance of wildfire ignitions to ensure an appropriate, risk informed and effective wildfire response to meet National and Agency goals.

- Take all necessary and prudent actions to ensure firefighter and public safety.
- Ensure sufficient qualified fire and non-fire personnel are available to support fire operations at a level commensurate with the local and national fire situation.
- Ensure accurate position descriptions are developed and reflect the complexity of the unit. Individual Development Plans promote and enhance FMO currency and development.
- Provide a written Delegation of Authority to FMOs that provides an adequate level of operational authority at the unit level. Include Multi-Agency Coordinating (MAC) Group authority, as appropriate.
- Ensure the plans contained in the Fire Management Reference System (FMRS) are based on resource objectives found in the LRMP.
- Ensure budget requests and allocations reflect preparedness requirements from the program of work and support objectives from the LRMP.
- Develop preparedness standards that are in compliance with agency fire policies.
- Management teams meet once a year to review fire and aviation policies, roles, responsibilities, and delegations of authority. Specifically address oversight and management controls, critical safety issues, and high-risk situations such as transfers of incident command, periods of multiple fire activity, and Red Flag Warnings.
• Ensure fire and aviation preparedness reviews are conducted each year and include the key components of the record of decision for the nationwide aerial application of fire retardant on National Forest System land.

• Meet annually with cooperators and review interagency agreements to ensure their continued effectiveness and efficiency.

• Meet annually with local US Fish and Wildlife Service and NOAA Fisheries specialists to ensure the avoidance maps reflect changes during the year on additional species or changes made for designated critical habitat, and reporting and monitoring guidelines are still valid and being applied.

Wildfire Response

• Ensure use of fire funds is in compliance with Agency policies.

• WFDSS will be used to approve and publish decisions on all fires. See Chapter 11 for the fire criteria that require a published decision.

• Personally attend reviews on Type 1 and Type 2 fires. Ensure Agency Administrator representatives are assigned when appropriate.

• Provide incident management objectives, written delegations of authority, and a complete Agency Administrator briefing to Incident Management Teams.

• Ensure briefings include any applicable information for avoidance areas and waterways per the nationwide aerial application of fire retardant direction, mapping, and cultural resources. Include the reporting requirements in the briefing if a misapplication of fire chemical occurs. Provide resource advisors if the use of aerially applied fire retardant is expected and the unit has mapped avoidance areas (which include waterways and 300’ or larger buffers) and otherwise evaluate the need for resource advisors for all other fires, and assign as appropriate.

• For all unplanned human-caused fires where responsibility can be determined, ensure actions are initiated to recover cost of suppression activities, land rehabilitation, damages to the resource, and improvements.

• Ensure structure exposure protection principles are followed (FSM 5135).

• Ensure that a sufficient number of incident after action reviews are conducted for Type 3, 4, and 5 wildfires to adequately assess the unit’s wildfire response capability, performance, procedures and to enhance learning.

Wildfire Response Responsibilities and Oversight

• Agency Administrators will ensure that all Forest Service employees and employees of interagency partners working on Forest Service jurisdiction wildfires clearly understand direction.

• Agency Administrators must approve and publish decisions in WFDSS in a timely manner and issue delegations of authority to the Incident Commander in accordance with FSM 5133.3.
- Line Officers will assign Agency Administrators to oversee incidents based on Certification Level according to incident type.

<table>
<thead>

</tr>
</tbody>
</table>

\(^1\)Authority may be retained at the Regional Forester level.

- Critical long duration wildfire oversight roles include ensuring that:
  - Up-to-date Published Decisions are completed and documented in WFDSS.
  - Hazards are identified and risk assessments are incorporated into Published Decisions.
  - Coordination with partners and potentially affected parties is conducted (including smoke impacts); Unified Command is implemented early when appropriate.
  - Resource capacity and availability are adequately assessed to meet expectations.

- This oversight role should address concerns of the states, cooperators, and the public including air quality impacts from multiple wildfires.

**Safety**

- Review safety policies, procedures, and concerns with field fire and aviation personnel.
- Ensure timely follow-up actions to program reviews, fire preparedness reviews, fire and aviation safety reviews, and management reviews.
- Monitor the fire situation and provide oversight during periods of critical fire activity and situations of high risk.
- Ensure there is adequate direction in fire management plans to maintain fire danger awareness.
- Take appropriate actions with escalating fire potential.
- Ensure appropriate investigation or Lessons Learned analyses are conducted for incidents, entrapments, and serious accidents (see FSM 6730).

**Fuels**

- Plan and implement a hazardous fuels management and prescribed fire program applying principles and policy elements described in FSM 5100 and 5140 and guided by the goals described in the National Cohesive Wildland Fire Strategy.
- Complete a fuels treatment effectiveness assessment on all wildfires which start in or burn into a fuel treatment area.
• Enter results of the assessment in the Fuels Treatment Effectiveness Monitoring (FTEM) database found at www.nwportal.fs.usda.gov within 90 days of control of the fire. Reference FSM 5140.

**Prescribed Fire**

• Provide program leadership by visiting prescribed fire treatment projects and providing leader’s intent to prescribed fire personnel.

• Ensure compliance with National and Regional Office policy and direction for prescribed fire activities and ensure that periodic reviews and inspections of the prescribed fire program are completed.

• Coordinate prescribed fire program activities with Regional air quality specialists and federal, state, Tribal, air pollution control district or county regulatory authorities to ensure compliance with their regulations supported by the Clean Air Act.

• When multiple wildland fire events are occurring within an airshed, or any airshed is impacted by ongoing wildland fire events, fire managers will consider the cumulative impact to air quality. Initiation of new prescribed fire must be in compliance with air quality regulations and standards.

• Review and approve Prescribed Fire Plans and ignitions:
  ○ Engage in the development of the Complexity Analysis; review and approve the final complexity rating.
  ○ Ensure that the prescribed fire plan has been reviewed and recommended by a qualified technical reviewer.
  ○ Ensure that prescribed fire plans are designed to achieve desired conditions as described in Land and Resource Management Plans and project-specific NEPA decision document.
  ○ Approve prescribed fire plan amendments and determine the need for additional technical review of proposed plan amendments prior to approval.
  ○ If more than one year has elapsed since a prescribed fire plan was last approved, the plan will be reviewed, updated as necessary, and re-approved before implementation.
  ○ Authorize ignition of prescribed fire as delegated and adhere to procedures as described in ### FSM 5140 for Regional and/or National level approvals for initiation of new and continued prescribed fire activities at National Preparedness levels 4 and 5 or when forecast
National Fire Danger Rating System adjective ratings are at “Extreme” category.
• Report all instances of prescribed fires resulting in a wildfire declaration and/or air quality Notice-of-Violation as required in FSM 5140.

Agency Administrator Training and Certifications for Wildland Fire Management

There are two separate and distinct certifications that Agency administrators must attain related to fire management, one for wildfire decision making and one for prescribed fire. The training and experience requirements and certification process for both wildfire and prescribed fire are described below.

Agency Administrator Core Competencies
Core competencies that must be demonstrated by Agency Administrators exercising decision-making authority for wildfires or prescribed fires include:
• Risk Management
• Wildfire response and incident management processes
• WFDSS/IFTDSS and other decision support tools
• Fuels management and prescribed fire processes
• Fire Prevention, mitigation, and education processes
• Social, political, economic and environmental impacts of wildland fire management activities
• Collaboration with partners and stakeholders
• Fiscal management

These core competencies form the basis for the Agency Administrator Task Book which is used to document that an individual has indeed demonstrated these competencies while working toward certification. For access to the Task Book, Pathways Chart and additional information on the Forest Service Agency Administrator Fire Certification Programs, visit the Decision Support Toolbox at https://wfmrda.nwcg.gov.

Definitions
### Agency Administrator: A general term meaning the official with the delegated authority, responsibility, and qualifications for decision-making on incidents or prescribed fire within a particular administrative unit.
Coach: A fully qualified Agency Administrator/Representative at journey or advanced level.
Shadow: An individual that does not perform the duty of Agency Administrator/Representative, but observes a qualified, designated Agency Administrator/Representative.
Agency Administrator Trainee: An Agency Administrator working on certification at any given level by performing the role under the supervision and authority of the Agency Administrator and/or Representative.
Coach/Shadow Team: A team comprised of a qualified Coach and group of Shadows who may travel to multiple incidents and support sites to increase their level of understanding.

Acting Agency Administrator: An individual who has been delegated in writing the necessary authorities to act in an Agency Administrator roll and is certified at the level required by the incident complexity to provide relief and support.

Regional Forester Agency Administrator Representative: A representative that carries out roles and responsibilities as delegated.

Agency Administrator: A general term meaning the official with the delegated authority, responsibility, and qualifications for decision-making on incidents or prescribed fire within a particular administrative unit.

Agency Administrator Representative: A representative that carries out Agency Administrator roles and responsibilities as delegated.

Agency Administrator Trainee: An Agency Administrator working on certification at any given level by performing the role under the supervision and authority of a fully qualified Agency Administrator.

Coach: A fully qualified Agency Administrator certified at an experience level commensurate with the incident or project being managed (e.g., journey or advanced for wildfire and moderate or high for prescribed fire). The role of the coach is to advise and support the agency administrator trainee through various aspects of a wildfire incident, prescribed fire or all hazard incident.

Coach/Shadow Team: A team comprised of a qualified Coach and group of Shadows who may travel to multiple incidents and support sites to increase their level of understanding.

Line Officer: A Forest Service official who serves in a direct line of command from the Chief and has been delegated authority to make and execute decisions for their administrative unit(s). Examples are the deputy chiefs, Director of Law Enforcement and Investigations, regional foresters, station directors, forest supervisors, and district rangers. Line officers have authority to issue direction within delegated levels.

Shadow: A learning opportunity to observe various elements of a fire program. This position does not perform the duties of an Agency Administrator but observes a qualified AA during an incident for the purpose of increasing understanding of the duties. The shadow may participate as an individual or part of a group of trainees. It is an observational learning assignment; certification recommendations should be reserved for active trainee assignments where tasks are being performed, however certain aspects of the task book may be accomplished during the assignment.

Agency Administrator Wildfire Certification Program
The following principles will guide certification of Agency Administrators in wildfire management:

- Regional Foresters are accountable for annual certification of Agency Administrators by review process established by Regional Forester, such as Regional Line Officer Team;
- Agency Administrator evaluation includes standards for training, background and experience, demonstrated ability, and utilizing the Task Book and Wildfire Pathways Chart which will result in a qualitative evaluation of readiness by the Regional Forester;
- When the complexity level of a wildfire exceeds an Agency Administrator’s certification, a coach will be assigned;
- Care should be taken when assigning Acting AAs to ensure operational fire management responsibilities remain separated from agency administrator responsibilities in order to avoid collateral duty conflicts;
- Agency Administrator competencies (aka certification level) supersedes position (e.g., a District Ranger certified at the Advanced Level may be the AA for a Type I Incident);
- This certification program will be periodically evaluated and updated as needed. When changes are made in training requirements, the Regional Forester may choose to “grandfather” Agency Administrators thereby maintaining their existing certification level; however, the updated training requirements must be met before advancement to the next level or before recertification after a lapse in currency;
- Assistance with decision documentation and analysis can be requested through the Wildland Fire Management RD&A – National Fire Decision Support Center (NFDSC); and
- The Coaching/Shadowing functions, to be administered by each region, is an integral part of this certification program.

Agency Administrators will be evaluated in three basic areas:

- Training;
- Background and experience; and
- Demonstrated understanding of concepts and principles as outlined in the Task Book.

This certification program is a multi-level process where Agency Administrators demonstrate competence in one of three levels of managing wildfires. Those levels would be Working, Journey, and Advanced.

Guidelines

In consideration of the appropriate level (Working, Journey, Advanced) to assign an Agency Administrator, the Regional Forester should consider the following guidelines:
For individuals that do not meet at least the Working Level, a coach will be assigned to support that Agency Administrator in managing Type 3 or higher wildfire incidents.

**Working Level** - ### The Agency Administrator could manage a low to moderate complexity fire. The Agency Administrator Trainee must meet the following in order to be certified at the Working Level. The Agency Administrator could manage a Type 3, 4 or 5 wildfire or similar complexity incident. The Agency Administrator must meet the following in order to be certified at the Working Level:

- **Required Training:** *Risk Management 101*** (in development); M-581, *Fire Program Management, an Overview,* ### or M-582, *Fire Program Management, Leading Complex Fire Programs* or Agency Administrators Prescribed Fire Workshop at the Prescribed Fire Training Center (recommended for AAs seeking more hands-on prescribed fire experience), and WFDSS training – WFDSS Refresher Topics located on the Decision Support Toolbox. [https://wfmrda.nwcg.gov/line_officer_resources.php](https://wfmrda.nwcg.gov/line_officer_resources.php)

- **Required Background and Experience:**
  - Successful management of a minimum of one Type 3 or higher fire. Consider duration, complexity and size of the fire.

- **Other Background, Experience, and Training That Supports:**
  - Applicable experience in prescribed fire, wildfire, all-hazard or other incident oversight may also be considered in addition to other guidelines.
  - ### Management oversight of a low-complexity fire program and/or experience as an Agency Administrator or representative Management oversight of a moderate-high complexity fire program.

- **Demonstrated Ability:** Successful evaluation by a coach (including feedback from ICs or ACs) that the candidate has demonstrated understanding and application of the responsibilities of an Agency Administrator ### on smaller low-complexity fires with a basic understanding of the elements of the core competencies Trainee. Use AA Task Book to document.

**Journey Level** - ### The Agency Administrator could manage a moderate to high complexity fire. The Agency Administrator Trainee needs to be certified at the Working Level and meet the following to become certified at the Journey Level. The Agency Administrator could manage Type 2 or lower complexity fires or similar incidents. The Agency Administrator needs to be certified at the Working Level and meet the following to become certified at the Journey Level:

• **Required Background and Experience:**
  - Successful management of a minimum of one Type 2 or higher fire, or one successful higher complexity fire (Type 1). Duration, complexity and size of the fire should be considered. Successful management of a minimum of one Type 2 fire or similar complexity incident. Duration, complexity and size of the fire should be considered.

• **Other Background, Experience, and Training That Supports:**
  - Applicable experience in prescribed fire, wildfire, all-hazard or other incident oversight may also be considered in addition to other guidelines.
  - Management oversight of a moderate-complexity fire program, or experience as an Agency Administrator or Representative on Type 2 or higher fires. Management oversight of a moderate-high complexity fire program.

• **Demonstrated Ability:** Successful evaluation by a coach (including feedback from ICs or ACs) that the candidate has demonstrated understanding and application of the responsibilities of an Agency Administrator. Representative on moderate to large complex fires in the core competencies, and other elements that may be relevant. Use AA Task Book to document.

**Advanced Level** – The Agency Administrator could manage one or more high-complexity fire(s). The Agency Administrator Trainee needs to be certified at the Journey Level, and meet the following to become certified at the Advanced Level: The Agency Administrator could manage one or more Type 1 wildfire or similar complexity incidents. The Agency Administrator needs to be certified at the Journey Level, and meet the following to become certified at the Advanced Level:

• **Required Training:** Risk Management 101 (in development); M-582, Fire Program Management, Leading Complex Fire Programs; and WFDSS training—WFDSS Refresher Topics located on the Decision Support Toolbox—https://wfmrda.nwcg.gov/ line_officer_resources.php. Risk Management 101; M-582, Fire Program Management, Leading Complex Fire Programs or Agency Administrators Prescribed Fire Workshop at the Prescribed Fire Training Center (recommended for AAs seeking more hands-on prescribed fire experience); at least one continuing education course in fireline leadership/decision-making. Pathways diagram and resources can be found on the Decision Support Toolbox: https://wfmrda.nwcg.gov/line_officer_resources.php.

• **Required Background and Experience:**
  - Successful management of several Type 1 or 2 fires (at least one is a Type 1 fire), depending on fire experience. Duration, complexity, and
size of the fires should be considered. Successful management of one Type 1 wildfire or similar complexity incident. Duration, complexity, and size of the fires should be considered.

Other Background, Experience, and Training That Supports:

• Other Background, Experience, and Training That Supports:
  ○ Applicable experience in prescribed fire, wildfire, all-hazard or other incident oversight may also be considered in addition to other guidelines.
  ○ Management oversight of a moderate to high-complexity fire program.

• Demonstrated Ability: Successful evaluation by a coach (including feedback from ICs or ACs) that the candidate has demonstrated understanding and application of the responsibilities of an Agency Administrator on large complex fires. Use AA Task Book to document.

Evaluation Process

• Every trainee will receive an evaluation from a certified Agency Administrator/Agency Administrator Representative or coach using the Agency Administrator Task Book identified in the Line Officer/Agency Administrator Desk Reference for Fire Program Management.

• Individuals involved in a shadow assignment should receive creditable experience through documentation.

• The purpose of the Task Book is to provide consistency for the Agency Administrator Coach/Evaluator to evaluate trainees and document their demonstrated abilities to achieve the core competencies, which will be used as a component to achieve the next level certification.

• Every trainee will complete a Task Book for evaluation from an Agency Administrator, Agency Administrator Representative or coach as identified in the Line Officer/Agency Administrator Desk Reference for Fire Program Management.

Creditable work experiences to achieve and maintain certification levels:

• Coaching
• Regional Forester Representative (RFR)
• Acting Agency Administrator/Representative assignments
• Shadow assignments

Training opportunities and work experiences to achieve and maintain core competencies:

• Upper levels of fire leadership and fire management courses;
• Function as the Agency Administrator or cadre member for S-420, S-520, S-620, M-581, M-582, and other fire courses;
• Participate in advanced risk management training;
• Assigned to a Type 1 or Type 2 team as a training assignment (e.g., shadow plans) and see the world from their viewpoint;
• WFDSS training (see the WFDSS homepage https://wfdss.usgs.gov for training materials and the WFM RD&A Line Officer Resources page for Agency Administrator specific refresher training materials https://wfmrda.nwcg.gov/);
• Include risk management and fire management topics during annual line officer meetings;
• Attend staff rides (staff rides need to include a stand that portrays the Line Officer or Agency Administrator’s perspective);
• Participate in prescribed fires and/or attend prescribed fire training;
• Participate in other leadership and/or decision-making training;
• Attend L-580, Leadership is Action.

Refer to the pathways chart found in Decision Support Toolbox.

### Currency

Currency is reviewed annually by the Certifying Official for frequency of demonstrated exercise of Core Competencies through activities such as those described above or assignment as Agency Administrator/Coach/Representative on an incident. To maintain currency, an Agency Administrator/Representative will as a minimum, engage in at least one extended response wildfire incident within a three-year period. Currency is certified annually by the Regional Forester for frequency of demonstrated exercise of Core Competencies through activities such as those described above or assignments as Agency Administrator on incidents of appropriate level within a three-year interval.

### Guidance on the Selection of Coaches

Coaches can be a current or former Agency Administrator/Representative. The Regional Forester determines the level of certification for which a coach is qualified. See Coach/Shadow guide in the Decision Support Toolbox:

Criteria for individuals serving as coaches are as follows:
• Must be a “Journey” level Agency Administrator/Representative in dealing with large fire incident, or rated at an experience level commensurate with incident being managed. Present and past Agency Administrators can serve as coaches, including retirees that were qualified/experienced, and
• Must be willing and able to serve as a coach.

### Agency Administrator Prescribed Fire Certification

The following principles will guide certification of Agency Administrators (AA) for prescribed fire:
• Regional Foresters are accountable for annual certification of AAs to approve and authorize prescribed fire.
• Agency Administrator evaluation includes standards for training, background and experience, and demonstrated ability, which will result in a qualitative evaluation of readiness by the Regional Forester.
• When the complexity level of a prescribed fire exceeds an AAs certification, an appropriately certified AA will be assigned and must approve the complexity analysis and the burn plan along with the AA being mentored/coached.

• The authorization to ignite a prescribed fire must be approved by an appropriately certified AA; however, the Line Officer with authority over their assigned unit will also retain authority to authorize or prohibit the ignition based on their judgement regardless of their certification level;

• Care should be taken when assigning Acting AAs to ensure operational fire management responsibilities remain separate from AA responsibilities in order to avoid collateral duty conflicts.

• This certification program will be periodically evaluated and updated as needed; when changes are made in training requirements, the Regional Forester may choose to “grandfather” AAs thereby maintaining their existing certification level, however the updated training requirements must be met before advancement to the next level or before recertification after a lapse in currency.

• The Coach/Shadow functions, to be administered by each region, is an integral part of this certification program.

Agency Administrators will be evaluated in three basic areas:

• Training;

• Background and experience; and

• Demonstrated understanding of concepts and principles.

This certification program is a multi-level process where Agency Administrators demonstrate competence in one of three levels of prescribed fire complexity. Those levels are Low, Moderate, and High.

Guidelines

In consideration of the appropriate qualification level (Low, Moderate, or High) to certify an Agency Administrator, the Regional Forester should consider the following guidelines:

Low Complexity Level

The Agency Administrator can review, approve, authorize and provide oversight for the management of low complexity prescribed fires. The Agency Administrator Trainee must meet the following in order to be certified at the Low Complexity level:

• **Required Training:** M-581, Fire Program Management – An Overview or M-582, Fire Program Management – Leading Complex Fire Programs, or Agency Administrators Prescribed Fire Workshop at the Prescribed Fire Training Center (recommended for AAs seeking more hands-on prescribed fire experience).
CHAPTER 5 USFS PROGRAM ORGANIZATION AND RESPONSIBILITIES

- **Required Background and Experience:** Successful management of a minimum of one (1) Low Complexity prescribed fire, or one or more low complexity wildfires (Type 4 or 5).

- **Other Background, Experience, and Training That Supports:**
  - Applicable experience in prescribed fire, wildfire, all-hazard or other incident or project oversight may also be considered in addition to other guidelines.
  - Management oversight of a low-complexity fire program.

- **Demonstrated Ability:** Successful evaluation by a coach (including feedback from FMO/Fire Staff/Director) that the candidate has demonstrated understanding and application of the responsibilities of an Agency Administrator on smaller low-complexity prescribed fires with a basic understanding of the elements of the core competencies. Use AA Task Book to document.

**Moderate Complexity Level**

The Agency Administrator can review, approve, authorize and provide oversight for the management of moderate complexity prescribed fires. The Agency Administrator Trainee needs to be certified at the Low Complexity Level and meet the following to become certified at the Moderate Complexity level:

- **Required Background and Experience:** Successfully review and approve one (1) or more prescribed fire plans at a moderate complexity level and authorize and provide oversight for the ignition of three (3) or more individual burn units under a moderate complexity plan, and complete a minimum of (1) post-burn review of a moderate complexity prescribed fire.

- **Other Background, Experience, and Training That Supports:**
  - Applicable experience in wildfire, all-hazard or other incident oversight may also be considered in lieu of other guidelines.
  - Management oversight of a moderately complex prescribed fire program, providing for a workforce with appropriate training and equipment, NEPA compliance and project planning, social/political considerations, smoke management, public information, etc.

- **Demonstrated Ability:** Successful evaluation by a supervisor or coach (including feedback from FMO/Fire Staff/Director) that the candidate has demonstrated understanding and application of the responsibilities of an Agency Administrator on moderate complexity prescribed fires with an understanding of the core competencies and other elements that may be relevant.
High Complexity Level

The Agency Administrator can review, approve, authorize and provide oversight for the management of high complexity prescribed fires. The Agency Administrator Trainee needs to be certified at the Moderate Complexity Level, and meet the following to become certified at the High Complexity Level:

- **Required Training:** M-582, Fire Program Management, Leading Complex Fire Programs or Agency Administrators Prescribed Fire Workshop at the Prescribed Fire Training Center (recommended for AAs seeking more hands-on prescribed fire experience). Risk Management 101; M-582, Fire Program Management – Leading Complex Fire Programs; at least one continuing education course in fireline leadership/decision-making. Pathways diagram and resources can be found on the Decision Support Toolbox https://wfmrda.nwcg.gov/line_officer_resources.php.

- **Required Background and Experience:** Successfully review and approve one (1) or more prescribed fire plans at a high complexity level and authorize and provide oversight for the ignition of one (1) or more burn units under a high complexity prescribed fire plan and, complete a minimum of one (1) post-burn review of a high complexity prescribed fire.

- **Other Background, Experience, and Training That Supports:**
  - Applicable experience in prescribed fire, wildfire, all-hazard or other incident oversight may also be considered in lieu of other guidelines.
  - Management oversight of a moderate to high complexity prescribed fire program, providing for a workforce with appropriate training and equipment, NEPA compliance and project planning, social/political considerations, smoke management, public information, etc.

- **Demonstrated Ability:** Successful evaluation by a supervisor an Agency Administrator or coach (including feedback from FMO/Fire Staff/Director) that the candidate has demonstrated understanding and application of the responsibilities of an Agency Administrator on large complex fires in the core competencies, and other elements that may be relevant.

**Evaluation Process**

- Every trainee will receive an evaluation from a certified Agency Administrator or coach using the Agency Administrator Task Book. Identified in the Line Officer/Agency Administrator’s Desk Reference for Fire Program Management.
- Individuals involved in a shadow assignment should receive creditable experience through documentation.
- Refer to the pathways chart found in Decision Support Toolbox: https://wfmrda.nwcg.gov/line_officer_resources.php.

**Creditable work experiences to achieve and maintain certification levels:**

- Coaching/Shadow assignments.
- Assignments as member of a prescribed fire implementation organization.
Training opportunities to achieve and maintain core competencies:
- Upper levels of fire leadership and fire management courses;
- Function as the Agency Administrator in sand table exercises and training simulations;
- Participate in prescribed fire and fire management training such as RX-410 and RX-510;
- Act as a member or leader for a team assigned to review a Declared Wildfire or Violation of Air Quality Standards;
- Attendance/Participation in RT-300, Prescribed Fire Burn Boss Refresher training;
- Participate in prescribed fires and/or attend prescribed fire training; and
- Participate in other leadership and/or decision-making training.

Currency

Currency is reviewed annually by the Certifying Official for frequency of demonstrated exercise of Core Competencies. To maintain currency, an Agency Administrator will as a minimum, engage in the review and approval of prescribed fire plan(s) at least once within a three year period which may include coaching assignments. Currency is certified annually by the Regional Forester for frequency of demonstrated exercise of Core Competencies through activities such as those described above or assignments as Agency Administrator on incidents of appropriate level within a three-year interval.

Guidance on the Selection of Coaches

Coaches can be a current or former Agency Administrator/Representative. The Regional Forester determines the level of certification for which a coach is qualified.

Criteria for individuals serving as Coaches are as follows:
- Must be a “Moderate” or “High” level Agency Administrator/Representative commensurate with the complexity level of the prescribed fire project being managed. Present and past Agency Administrators can serve as coaches, including retirees that were qualified/experienced; and
- Must be willing and able to serve as a Coach.

Refer to the pathways chart found in Decision Support Toolbox: https://wfmrda.nwcg.gov/line_officer_resources.php.

Specific Fire Management Staff Responsibilities for Fire Operations at the Field Level

Preparedness
• Use sound risk management practices as the foundation for all aspects of fire and aviation management.
• Ensure that only trained and qualified personnel are assigned to fire and aviation duties.
• Develop, implement, evaluate, and document fire and aviation training program to meet current and anticipated needs.
• Establish an effective process to gather, evaluate, and communicate information to managers, supervisors, and employees. Ensure clear concise communications are maintained at all levels.
• Ensure fire and aviation management staffs understand their roles, responsibilities, authority, and accountability.
• Develop and maintain effective communication with the public and cooperators.
• Regardless of funding level, provide a safe, effective, and efficient fire management program.
• Organize, train, equip, and direct a qualified work force. An Individual Development Plan (IDP) must be provided for incumbents who do not meet new standards. Establish qualification review process.
• Take appropriate action when performance is exceptional or deficient.
• Ensure fire and aviation policies are understood, followed, and coordinated with other agencies as appropriate.
• Ensure that adequate resources are available to implement fire management operations.
• Provide fire personnel with adequate guidance, training, and decision-making authority to ensure timely decisions.
• Develop and maintain agreements, annual operating plans, and contracts on an interagency basis to increase effectiveness and efficiencies.
• Develop, maintain, and annually evaluate both the FMRS and Spatial Fire Planning in WFDSS to ensure accuracy and validity.
• Ensure budget requests and allocations reflect preparedness requirements from the program of work and support objectives from the LRMP.
• Develop and maintain current operational plans (e.g., dispatch, pre-attack, prevention).
• Ensure that reports and records are properly completed and maintained.
• Ensure fiscal responsibility and accountability in planning and expenditures.
• Assess, identify, and implement program actions that effectively reduce unwanted wildland fire ignitions and mitigate risks to life, property, and resources.
• Work with cooperators to identify processes and procedures for providing fire adapted communities within the wildland urban interface.

Wildfire Response
• Provide for and personally participate in periodic site visits to individual incidents and projects.
• Utilize the Risk Complexity Assessment to ensure the proper level of management is assigned to all incidents.
• Ensure incoming personnel and crews are briefed prior to fire and aviation assignments.
• Coordinate the development of Published Decisions within WFDSS with local unit staff specialists for all fires that escape initial attack.
• Ensure effective transfer of command of incident management occurs and safety is considered in all functional areas.
• Monitor fire activity to anticipate and recognize when complexity levels exceed program capabilities. Increase managerial and operational resources to meet needs.
• Complete cost recovery actions when unplanned human-caused fires occur.
• Ensure structure exposure protection principles are followed.
• Ensure all misapplications of wildland fire chemicals are reported and appropriate consultation conducted as needed (see Chapter 12).
• Ensure 5% assessment of fires less than 300 acres that had aerial fire retardant used and have avoidance areas as a result of the record of decision for the nationwide aerial application of fire retardant on National Forest System land is completed and documented for misapplication reporting.
• Ensure all assessments of impacts to threatened and endangered species or cultural resources are conducted by trained and qualified resource personnel.

Safety
• Ensure completion of a Job Hazard Analysis (JHA) or Risk Assessment (RA) for fire and fire aviation activities, and implement applicable risk mitigation measures.
• Ensure work/rest and Length of Assignment guidelines are followed during all fire and aviation activities. Deviations are approved and documented.
• Initiate, conduct, and/or participate in fire management related reviews and investigations.
• Monitor fire season severity predictions, fire behavior, and fire activity levels. Take appropriate actions to ensure safe, efficient, and effective operations.
Prescribed Fire

- Ensure a written, approved burn plan exists for each prescribed fire project.
- Prepare and implement all prescribed fire plans in accordance with the Interagency Prescribed Fire Planning and Implementation Procedures Guide (PMS 484) available at https://www.nwcg.gov/publications/484.
- Ensure that the Prescribed Fire Burn Boss assigned to each project is qualified at the appropriate level as determined by project complexity (see the Interagency Prescribed Fire Planning and Implementation Procedures Guide at https://www.nwcg.gov/publications/484 for specific guidance).
- Responsibility for prescribed fires in patrol/mop-up status may be assigned to the unit Duty Officer (see below) until declared “out.” The DO may assign either a Burn Boss or Incident Commander at a level commensurate with expected activities to coordinate on-site actions (e.g., ICT5 for 1 engine to patrol). In the event that elements of the burn plan other than patrol/mop-up (e.g., holding or contingency) become necessary, then an appropriately qualified Burn Boss will be assigned to continue implementation of the approved burn plan.
- Review and update all prescribed fire plans as necessary to comply with policy or procedures and submit to agency administrator for review and approval.
- Submit amendments to prescribed fire plans to the agency administrator for approval.
- If more than one year has elapsed since approval, a prescribed fire plan will be reviewed to ensure assumptions are still valid and conditions have not changed, updated as necessary, and resubmitted to the agency administrator for approval.

Fire and Aviation Management (FAM) Duty Officer

Each Forest or Grassland Fire Management Officer or Assistant Fire Management Officer will perform the duties of a FAM Duty Officer (DO) for their unit, or will provide a delegated DO, during any periods of predicted or actual incident activity. Individuals performing as DO must have the approval of the unit’s Agency Administrator and meet the minimum NWCG qualifications as identified in the FS-FAQG Chapter 4. https://www.fs.fed.us/fire/publications/FSFAQG_Chapter4_Dec2016.pdf
https://www.fs.fed.us/managing-land/fire/publications

The required duties for all DOs are:
- Serve as the unit’s primary contact with Dispatch for both on and off-unit assignments.
- Monitor unit incident activity for compliance with Forest Service risk management practices.
- Coordinate and set priorities for unit suppression actions and resource allocation.
- Keep Agency Administrators, suppression resources, and information officers informed of the current and expected situation.
• Plan for and implement actions required for future needs.
• Document key decisions and actions.

DOs will perform the above duties in addition to any unit specific duties assigned by the unit’s Agency Administrators or fire managers through a delegation of authority or unit operating plan.

In the event that the DO is required to accept an incident assignment, the outgoing DO must transition with another qualified and approved DO.

Use of District/Zone DOs is intended to manage span of control. When assigned to the DO role, DOs will not concurrently perform any ICS command or operational functions directly connected to an incident.

DO staffing levels may vary based on locally determined metrics such as fire danger, local area Planning Level, predicted incident activity, prescribed fire implementation, and/or span of control.

Fire Management Position Requirements

The Interagency Fire Program Management Qualifications Standard (IFPM) and Forest Service Fire Program Management Standard (FS-FPM) will be used in conjunction with specific agency requirements when filling vacant fire program positions, and as an aid in developing Individual Development Plans (IDPs) for employees.

Structure Exposure Protection Principles

Mission and Role

A significant role of the Forest Service is to manage natural resources on public land, and management of wildfire is a primary mission in that role. Wildland firefighter training, tools, and personal protective equipment are based on the wildland environment. This does not prevent using wildland tactics in the Wildland Urban Interface (WUI) when risks are mitigated. Wildland firefighter training for the WUI, however, is centered on the concepts of preventing wildfire from reaching areas of structures and/or reducing the intensity of fire that does reach structures. Fire suppression actions on structures that are outside federal jurisdiction, outside the scope of wildland firefighting training, or beyond the capability of wildland firefighting resources are not appropriate roles for the Forest Service.

Forest Service leadership will express clear and concise “leader’s intent” to ensure structure protection assignments are managed safely, effectively, and efficiently. Leaders are expected to operate under existing policies and doctrine under normal conditions. Where conflicts occur, employees will be expected to weigh the risk versus gain, and operate within the intent of Agency policy and doctrine.
Strategic Principles

- The Forest Service actively supports creation of Firewise and Fire Adapted Communities and structures that can survive wildfire without intervention. We support the concept that property owners have primary responsibility for reducing wildfire risks to their lands and assets.
- The Forest Service will actively work toward applying Firewise concepts to all Forest Service owned structures, facilities, and permitted use to serve as a model to publics and communities.
- The Forest Service will apply strategy and tactics to keep wildfires from reaching structures, as prudent to do so, considering risk to firefighters and publics, fire behavior, values at risk including natural resources, availability of firefighting resources, and jurisdictional authorities.
- The use of wildland tactics in the WUI, when risks are mitigated, will be based on the objectives of preventing wildfire from reaching areas of structures and/or reducing the intensity of fire that does reach structures.
- Structure protection will be limited to the use of standard wildfire response tactics including the use of standard equipment, fire control lines, and the extinguishment of spot fires near or on the structure when safe and practical.
- The Forest Service will be proactive in developing agreements with interagency partners to clarify its structure protection policy.
- The Forest Service structure protection role is based on the assumption that other Departments and agencies will fulfill their primary roles and responsibilities. The Forest Service will not usurp individual, local, or state responsibility for structure protection.
- Prior to task implementation, a specific structure protection role briefing will be accomplished.

Tactical Applications

Structure Protection Definition

Actions taken in advance of a fire reaching structures or other improvements are intended to safely prevent the fire from damaging or destroying these values at risk. For the Forest Service, structure protection involves the use of standard wildland fire suppression tactics and control methods; including the use of standard equipment, fire control lines, and the extinguishing of spot fires near or on the structure when safe and practical.

USFS Role

As documented in a Forest Service doctrinal principle, “Agency employees respond when they come across situations where human life is immediately at risk or there is a clear emergency, and they are capable of assisting without undue risk to themselves or others.” This principle serves as a foundational basis for the roles employees play in structure protection.
Pursuant to this “structure protection” policy provided above, Forest Service personnel may engage support from other cooperators in structure protection activities when 1) requested by local government under terms of an approved cooperative agreement or 2) when operating within a unified command. The agency is permitted, without agreement, to render emergency assistance to a local government in suppressing wildland fires, and in preserving life and property from the threat of fire, when properly trained and equipped agency resources are the closest to the need, and there is adequate leadership to do so safely. The agency will NOT routinely provide primary emergency response (medical aids, fire suppression, HAZMAT, etc., as identified on “run cards” or preplanned dispatch scenarios) nor will the agency supplant the local government responsibility to do so.

The contents of a cooperative agreement will clearly define the responsibilities of partners. Regarding structural fire protection, typical Forest Service responsibilities in the case of mutual aid, initial attack, extended attack, or large fire support include:

- To provide initial attack through extended attack actions consistent with application of wildland fire strategy and tactics.
- To supply water in support of tribal, state or local agencies having jurisdictional responsibility for the fire. This would include the use of water tenders, portable pumps, hose, tanks, and supporting draft sites.
- To assist or supply foam or chemical suppressant capability with engines or aerial application.
- To assist local authorities in the event of evacuations.
- To assist local authorities by assessing (triaging) structures for defensibility from wildfire.
- To coordinate with local authorities on actions taken by Private Structure Protection Companies.

As such, there should not be an expectation that the Forest Service will:

- “Wrap” or set up and administer sprinklers around privately owned structures.
- Remove fuels immediately surrounding a structure such as brush, landscaping, or firewood.

As addressed above, the Forest Service will apply strategy and tactics to keep wild fires from reaching structures, as prudent to do so, considering risk management for firefighters and publics, fire behavior, values at risk including natural resources, availability of firefighting resources, and jurisdictional authorities.

The Forest Service shall not:

- Take direct suppression actions on structures other than those that tactically reduce the threat of fire spread to them.
• Enter structures or work on roofs of structures for the purpose of direct 
suppression actions.

In consideration of Forest Service owned or leased structures outside of 
structure fire protection areas these same policies apply. The use of Firewise 
principles and aggressive fire prevention measures will be employed for Forest 
Service structures at every opportunity.

If a Forest Service structure is determined to be at risk, “wrapping” or other 
indirect protection methods for the structure can be authorized by the Agency 
Administrator. Documentation of these decisions needs to be placed in the fire 
documentation package and the unit files. Any employee engaged in “wrapping” 
or other indirect methods of protection operations will be thoroughly briefed and 
trained in correct safety and personal protection equipment procedures, 
especially if the use of ladders or climbing on the structure is necessary. In any 
case, the Forest Service holds that no structure is worth the risk of serious injury 
to an employee in an attempt to protect that structure or facility from fire.

Local Government Role
Local government has the responsibility for emergency response, including 
structure protection, within their jurisdiction. This responsibility is usually found 
within the fire agencies’ charter and is substantiated by tax dollar revenue (sales 
and/or property tax).

Cost
Local governments assume the financial responsibility for emergency response 
activities, including structure protection, within their jurisdictions. Local 
government will order resources deemed necessary to protect structures within 
their jurisdiction. Local agencies will not be reimbursed for performing their 
responsibilities within their jurisdiction.

Tactical Operating Principles
When engaging in structure protection activities, as defined above, Forest 
Service personnel will apply the following principles:
• The first priority for all risk-decisions is human survival, both of firefighters 
and the public.
• Incident containment strategies specifically address and integrate protection 
of defendable improved property and wildland values.
• Direct protection of improved property is undertaken when it is safe to do 
so, when there are sufficient time and appropriate resources available, and 
when the action directly contributes to achieving overall incident objectives.
• Firefighter decision to accept direction to engage in structure protection 
actions is based on the determination that the property is defendable and the 
risk to firefighters can be safely mitigated under the current or potential fire 
conditions.
• A decision to delay or withdraw from structure protection operations is the appropriate course of action when made in consideration of firefighter safety, current or potential fire behavior, or defensibility of the structure or groups of structures.

• Firefighters at all levels are responsible to make risk-decisions appropriate to their individual knowledge, experience, training, and situational awareness.

• Every firefighter is responsible to be aware of the factors that affect their judgment and the decision-making process, including: a realistic perception of their own knowledge, skills, and abilities, the presence of life threat or structures, fire behavior, availability of resources, social/political pressures, mission focus, and personal distractions such as home, work, health, and fatigue.

• An individual’s ability to assimilate all available factors affecting situational awareness is limited in a dynamic wildland urban interface fire environment. Every firefighter is responsible to understand and recognize these limitations, and to apply experience, training and personal judgment to observe, orient, decide, and act in preparation for the “worst case.”

• It is the responsibility of every firefighter to participate in the flow of information with supervisors, subordinates, and peers. Clear and concise communication is essential to overcome limitations in situational awareness.
Chapter 6
BIA Program Organization and Responsibilities

Bureau of Indian Affairs Fire Management Policy
Policy and responsibility for the Bureau of Indian Affairs (BIA) WFM program is documented in the Indian Affairs Manual (IAM), Part 90, Chapter 1. This part identifies the authorities, standards, and procedures that have general and continuing applicability to wildland fire activities under the jurisdiction of the Assistant Secretary – Indian Affairs.

BIA Mission
The Bureau of Indian Affairs Mission is to enhance the quality of life, to promote economic opportunity and to carry out responsibility to protect and improve the trust assets of American Indians, Indian Tribes, and Alaska Natives.

BIA Fire Operations Website
BIA Fire Operations maintains a website that hosts operational, informational, and policy-related documents. The website also contains information about the following programs: Job Recruitment, BIA Training, Pathways Internship Program, Fuels Management, Aviation Safety and Wildland Fire Prevention. The address to the BIA Fire Management website is https://www.bia.gov/bia/ots/dfwm/bwfm.

Branch of Wildland Fire Management Organization

Agency Administrator’s Roles

The following positions are responsible for WFM activities of the Bureau (including such activities when contracted for, in whole or in part, with other Agencies or Tribes) under the statutes cited in 620 DM 1.1.

Director, Bureau of Indian Affairs
Responsible for the implementation of an effective WFM program:
- Responsible for implementation of policies and recommendations in the Federal Wildland Fire Management Policy;
- Adopts and establishes wildfire prevention policies to protect Indian Lands and Indian natural resources from human-caused wildfires;
- Ensures compliance and capacity to comply with statutes, regulations, IA policy, and Department of the Interior (DOI) policy applicable to the prevention of human-caused wildfires on Indian Lands;
- Represents Indian Affairs on the Federal Fire Policy Council; and
- Approves national level cooperative wildland fire management agreements with other federal agencies and interagency wildland fire coordinating groups.

Director, Office of Trust Services
- Implements the policies and recommendations in the Federal Wildland Fire Management Policy and Program Review Report;
- Reviews and recommends national wildfire prevention policy for Indian Country;
- Coordinates wildfire prevention activities among and between Office of Trust Services programs;
- Coordinates with Division Directors to ensure consistent implementation of wildfire prevention policies;
- Provides for the coordination of wildland fire management activities with other federal, state, and non-government fire protection agencies; and
- Represents Indian Affairs in Interior Fire Executive Council and Fire Executive council.

Division Chief, Forestry and Wildland Fire Management
- Provides overall direction to the wildland fire management program.

Branch Chief, Wildland Fire Management
Responsible to recommend policies and standards for firefighter safety, training, prevention, suppression and use of wildland fires on Indian Trust lands.
- Recommends policies, standards and guidance to the Bureau Director on the use of prescribed fire and fuels management to achieve fuels management and resource management objectives;
- Integrates wildland fire management into natural resource management;
• Establishes wildland fire management position competencies, standards and minimum qualifications for fire management officers, wildland fire specialists and leaders based on federal interagency standards;
• Implements national fire programs and activities including: current planning model, preparedness, fuels management, community assistance, prevention, emergency wildland fire operations, post fire activities, medical standards, and Interagency Fire Program Management Qualifications (IFPM);
• Reviews and evaluates regional wildland fire management programs;
• Represents or delegates representation for Indian Affairs in the coordination of overall wildland fire management activities at the National Interagency Fire Center (NIFC) and coordinates Indian Affairs representation on intra- and interagency wildland fire committees, groups and working teams, which include but are not limited to:
  a. National Wildfire Coordinating Group (NWCG)
  b. Fire Management Board
  c. Executive Aviation Committee (EAC)
  d. National Intergovernmental Aviation Council (NIAC)
  e. Interior Fire Executive Council
  f. National Multi-Agency Coordinating Group (NMAC)
  g. Information Technology Management Advisory Board (ITAB)
• In conjunction with other federal fire directors, establishes priorities for assignment of critical resources during wildland fire emergencies;
• Initiates or participates in boards of review concerning actions taken on selected wildland fires;
• Oversees prevention policy development and evaluates impacts on other wildland fire programs;
• Provides policy and procedural guidance to Regional Directors to achieve wildland fire prevention and education objectives;
• Negotiates cooperative agreements and/or modification of existing national level agreements to improve wildland fire management activities on Indian trust and restricted lands;
• Develops policies and standards for firefighter safety, equipment and training for the prevention, investigation, suppression and use of wildland fires on Indian trust and restricted lands;
• Reviews funding requests for fuels management, prevention, community assistance, facility construction, subsidiary and rehabilitation requests; makes determinations on funding levels and recommends approval to the Director, Office of Trust Services, based on guiding principles in the Federal Fire Policy, National Fire Plan (NFP), supporting documents and Secretarial directives;
• Approves and makes determination of funding levels for severity and post fire activity requests; and
• Oversees the national casual and vendor payment programs for emergency incident payments.
Regional Directors

1. Responsible for ensuring activities and/or plans reflect a commitment to safety and a state of readiness commensurate with values at risk to minimize wildland fire loss.

- Oversees allocation model implementation, preparedness, fuels management, community assistance, prevention, emergency wildland fire operations, post fire activities, medical standards, and IFPM standards;
- Develops regional level cooperative fire protection agreements;
- Ensures that wildfire prevention needs are met;
- Ensures that activities and/or plans reflect a commitment to firefighter and public safety and the reduction of property loss;
- Integrates wildland fire prevention program evaluations into fire readiness reviews conducted at Tribal and agency locations;
- Submits funding requests to Director of Operations, Branch of Fire Management for severity, fuels management, prevention, community assistance, facility construction, subsidiary and post fire activities;
- Ensures prevention needs are included in national long-term severity requests;
- Directs regional movement of fire management personnel and equipment to meet emergency needs;
- Oversees wildland fire prevention management programs within the region;
- Develops regional directives for standards and additional procedural policy, as needed, for wildland fire prevention planning, operational implementation, evaluation and fiscal accountability;
- Determines when a critical fire situation has exceeded agency capability and ensures that qualified personnel take immediate charge of fire suppression activities; requests assistance when the wildfire situation exceeds the capability of the region's resources;
- Certifies funding authorizations submitted by agency offices for estimated costs exceeding $5,000,000, and approves all decisions in WFDSS for fires exceeding $5 million dollars;
- Approves decisions over $10 million dollars as delegated by the Bureau Director. Notifies the Bureau Director when individual fires are anticipated to exceed $10 million dollars in cost;
- Approves all initiation or continuance of prescribed fire burn and wildland fire use plans at National Fire Preparedness Planning Level 4 and 5;
- Assigns boards of review on selected individual wildland fires which presented unusual problems or situations;
- Provides direction for cooperative agreements, self-determination contracts, and self-governance compacts with Tribes for wildland fire management programs as needed;
- Coordinates and implements regional fire preparedness planning activities;
- Approves and certifies that agency and Tribal WFPP’s meet or exceed the IA policy requirements for wildfire prevention;
• Oversees the region-wide casual and vendor payment programs for emergency incident payments;
• Represents Indian landowners interests and Indian Affairs on Geographic Area Coordination Groups and on Multi-Agency Coordinating (MAC) groups;
• Coordinates with the Office of Justice Services (OJS) Special Agent in Charge when criminal activity associated with wildfires occurs on Indian Lands; and
• Develops region-wide wildfire investigation policies and procedures.

Agency Superintendent (unless excepted in regional directives)
Ensures that every wildland firefighter, fireline supervisor and fire manager takes positive action to obtain compliance with established standards and safe firefighting practices.
• Protects Indian trust and restricted lands from wildfire by taking appropriate action as specified in the approved fire management plan to meet Indian landowner objectives or in the absence of an approved plan, takes immediate suppression action, consistent with other standards;
• Develops plans, prepares agreements and implement activities for prescribed fires, wildland fire use, community assistance and/or other fuel management activities in accordance with approved implementation plans and established standards and guidelines;
• Ensures agency fire management personnel develop and maintain fire management job qualifications and meet physical fitness standards in accordance with policy and assign personnel to fire suppression, prescribed fire, wildland fire use activities according to qualifications and demonstrated ability;
• Manages personnel to ensure that prevention goals and objectives are being achieved;
• Develops, updates, and maintains the local fire preparedness planning activities, wildland fire prevention plan, annual mobilization plans, and ensures initial attack capability and management personnel availability to provide for an adequate level of protection from wildfire;
• Initiates, develops, and implements approved post fire activities to prevent unacceptable resource degradation and to minimize threats to life or property resulting from wildfire;
• Initiates, develops, and implements approved rehabilitation activities to protect and sustain ecosystems, public health, safety, and to help communities protect infrastructure;
• Develops, updates and maintains agency Fire Management Plan’s;
• Negotiates cooperative agreements with adjacent protection organizations as needed;
• Negotiates reimbursable agreements with Tribal, local, state, and other federal agencies for wildland fire management activities as needed;
- Recommends a board of review be established to review actions taken on selected individual fires;
- Ensures that all escaped prescribed fire or any prescribed fire that results in resource or property damage are reviewed or investigated;
- Requests assistance through appropriate interagency channels when the fire situation exceeds the capabilities of the agency's resources;
- Initiates investigation of trespass from wildfires to determine cause and origin and if fire trespass has occurred;
- Ensures established wildfire investigation procedures and guidance are followed;
- Coordinates with appropriate law enforcement agency when wildfire crimes are suspected and/or detected;
- Enters and maintains employee fire qualifications in the Incident Qualification Certification System (IQCS) and enters and maintains fire occurrence in the Bureau fire reporting system;
- Coordinate the development of Published Decisions within WFDSS for all fires identified as requiring a decision and consistent with authority identified in Chapter 11.
- Maintains fiscal integrity in the use of the casual pay and vendor programs;
- Has responsibility for the adhering to the Administratively Determined (AD) Pay Plan for Emergency Workers (Casuals) hiring authority in accordance with the pay plan policy;
- Using prevention funding to implement the wildfire prevention actions in the agency or Tribal WFPP; ensuring that carryover is held to below the one-half of one percent; and
- Has responsibility for financial and accountability oversight for all wildland fire management programs.

**Tribal Contracts/Compacts**
The Tribes have three options to manage fire protection services. Tribes may use direct services, self-determination contracts or self-governance compacts to manage either a portion, or all of a Bureau program.

Public Law 93-638 [The Indian Self-Determination and Education Assistance Act of 1975, as amended; Title I and V]: provides maximum Indian participation in the governance and education of the Indian people; to provide for the full participation of Indian Tribes in programs and services conducted by the Federal Government for Indians and to encourage the development of human resources of the Indian people; to establish a program of assistance to upgrade Indian education; to support the right of Indian citizens to control their own educational activities; and for other purposes.

**Fire Management Administration**
These guidelines are intended to be used by the Bureau and Indian Tribes when negotiating annual funding agreements, whether P.L. 93-638 contracts (Title I) or Self-Governance Compacts (Title V).
Guiding Principles

- Indian Tribal fire management programs are held to the same standards as Bureau fire management programs. Both Bureau and Indian Tribal programs will strive to achieve excellence.
- Indian Tribal and Bureau WFM programs receive equal consideration for available budget and resources.
- The Bureau is committed to working with Indian Tribes to ensure the success of their WFM programs.
- Indian Tribes who desire to compact or contract national, regional or agency fire program functions or services provided by the Bureau, to benefit more than one Indian Tribe, must have a plan to provide comparable functionality or services and agreement of other affected Indian Tribes.

Inherently Federal Activities

- Hiring, termination and paying federal employees including Administratively Determined (AD) Emergency Workers (Casuals).
- The AD hiring authority is an inherently federal activity and requires Federal Government supervision. The AD hiring authority is granted through the DOI to the BIA, and cannot be delegated to a Tribally contracted or compacted program. However, Tribal programs can gather documentation to assist in meeting the requirements of the AD Pay Plan for Casals and specific national guidance.
- Approval, consolidation and submission of budget requests.
- Obligating federal funds.
- Approval of resource management or land use plans, fire management plans (FMPs), NEPA documents, wildland fire decision support system (WFDSS) documents, post wildland fire activity (ES/BAER) plans, and Delegations of Authority to incident management and post fire activity teams. The Bureau must approve the documents in the preceding sentence to fulfill its trust responsibility in resource protection.

Program Operational Standards

- Unless waivers to the following standards are explicitly approved and identified in Tribal annual funding agreements, the following standards will apply to Tribal fire management programs (Personnel Qualifications (90 IAM Chapter 3, 3.1, C.) (1) and (2)):
  - Adherence to the NWCG Wildland and Prescribed Fire Qualification System Guide NWCG Standards for Wildland Fire Position Qualifications PMS 310-1 is mandatory for all firefighters fighting wildfires on and off their respective jurisdictions.
  - Adherence to the IFPM Guide standards are mandatory for fire program management officers, fire specialists and fire project leaders.
  - Self-governance compact standards for qualification, physical fitness and safety will be those established by the parties to the agreement, but will not
be less than NWCG and IFPM standards when mobilized off their Tribal lands.

- Tribal fire management officers are responsible for certifying Tribal program employee qualifications and maintaining records of their employee qualifications. ### They may use the firefighter qualifications/certification component of the Incident Qualification and Certification System (IQCS). They may choose to do so, but are not required to use that system. All BIA/Tribal units with fire management programs are required to use the Incident Qualifications and Certification System (IQCS) to track all federal emergency responders.

- ### Fire occurrence reports will be encoded to the Wildland Fire Management Information (WFMI) System within two weeks after a wildfire is declared out. Wildfires that burn Indian trust lands under a Tribe’s protection must be reported and certified in InFORM promptly after being declared out. Obliging government funds is an inherently federal function and fire reports are an essential element in accounting for the obligation of federal funds.

- Placing resource orders for Incident Management Teams (IMT) to manage extended, large fire operations or for post wildland fire activity teams requires the involvement of the Bureau. All actions require that the Bureau approve delegations of authority to teams.

Program Planning

### There are various types and levels of planning required to conduct a fire management program, and are described below:

**Fire Program Workload Shares**

The Fire Program Workload Shares Assessment (WSA) supports preparedness budget distribution from the Regional Offices to their field-level units. It is intended to supplant the Most Effective Level (MEL) budget values that were generated by the former Fire Management Program Analysis (FMPA) process. The WSA uses the Graphical Network Interface (GeNi e) computer application to define program workload elements and assign breakpoints (to classify and normalize empirical data) and weights. Unlike purely subjective processes, GeNi e ensures that the decision criteria are documented, the math is performed without error, and the outputs can be readily reproduced.

Upon completion of the assessment, the WSA yields the percentage workload share for each unit evaluated, in reference to their combined workload. These share percentages then can be used to support a variety of decisions, such as the allocation of preparedness budgets from the Regional Office to its field-level units.

The WSA is a Regional-level tool. Its use is strictly voluntary and is intended to assess workload shares for the units within a given Region (not between Regions). Use of the WSA outputs is left to the discretion of the Regional
Office. Strategic planning for BIA field-level units relies primarily on two required documents, Fire Management Plans (including Spatial Fire Management Plans) and Fire Danger Operating Plans, per the interagency guidance in Chapters 9 and 10 respectively. Such plans rely on historical weather and fire occurrence data to depict the range of conditions in burning environment, define the fire season, and quantify the unit’s workload.

Fire Occurrence Data and Reporting
Consistent with the Guidance for Implementation of Federal Wildland Fire Management Policy (February 13, 2009), the Bureau recognizes two types of wildland fires when collecting and recording fire occurrence data. Those two types are: planned ignitions (i.e., prescribed fires) and unplanned ignitions (i.e., including escaped prescribed fires).

Specific guidance regarding prescribed fire data and reporting is provided in the BIA Fuels Management Program Planning and Implementation Guide. Reports for wildfires should be prepared in accordance with the detailed guidance provided in the BIA Fire Occurrence Reporting System Users Guide, which includes instructions for preparing Individual Final Fire Reports. Starting in calendar year 2020, all wildfires that burn on Indian trust lands must be documented with a single, certified Individual Final Fire Report in the Interagency Fire Occurrence Reporting Modules (InFORM) application, which replaced the Wildland Fire Management Information (WFMI) fire reporting application. For large or otherwise significant wildfires involving Indian trust lands, approved Incident Status Summary (ICS-209) reports, including a designated final report, must also be submitted per the requirements and guidance in Chapter 11.

Records Management for Fire Reports
The BIA Individual Final Fire Reports and final ICS-209 reports are official records. Accordingly, the local unit is responsible for adhering to Indian Affairs Records Management Manual and the local Fire Maintenance and Disposition Plan concerning management and archiving these hard copy records. Individual Final Fire Reports and final ICS-209 reports are official records for wildfires that burn on Indian trust lands. Accordingly, the BIA administrative unit overseeing the affected land is responsible for adhering to Indian Affairs Records Management Manual (https://www.doi.gov/ost/indian-affairs-records-management-manual) and the local File Maintenance and Disposition Plan concerning management and archiving these records.

Additional guidance regarding wildland fire incident records can be found on the National Wildland Fire Coordinating Group’s NWCG Incident Records Management website https://www.nwcg.gov/committees/incident-planning-subcommittee.

Fire Weather/RAWS
The fire weather program is managed and coordinated by the WFM Fuels Management Section, which has one staff member designated as the BIA National RAWS Coordinator. This program provides funding and technical support for the maintenance/emergency repairs of station sensors and the accuracy of station data for the wildland fire program.

All field-level units will identify at least one permanent, NFDRS fire weather station for fire planning purposes. A listing of these designated weather stations is maintained by the WFM Fuels Management staff and is updated annually.

Each Region must identify a Regional Point of Contact (RPOC), and each Agency/Tribe must identify a Local Point of Contact (LPOC) for fire weather and weather stations. These contacts must be updated immediately upon reassignment to a new POC and provided to the BIA National RAWS Coordinator.

**Bureau and Tribal NFDRS Weather Stations**

The BIA Central Office, Branch of Wildland Fire Management (BOWFM) maintains a national contract with Forest Technology Systems, Ltd., (FTS) to provide annual maintenance, factory exchange service, and emergency repair to 81 permanent NFDRS weather stations. When noncompliant or malfunctioning RAWS are identified or suspected, fire managers should implement the following hazard mitigation actions to expedite RAWS repair and to reduce risk to fire personnel: Contact a Technical Support Specialist at FTS and the BIA National RAWS Coordinator to resolve the noncompliance or emergency repair issue.

**Non-NFDRS Weather Stations**

In the Bureau’s managed inventory, there are 19 non-NFDRS weather stations, which are mostly portables and are mainly used for large wildfires and prescribed fires. These stations are also covered under the BIA’s national contract with Forest Technology Systems, Ltd., (FTS) to provide annual maintenance, factory exchange service and emergency repair.

- Non-NFDRS stations do not have to have a NWS station number or a station catalog in WIMS, but units may establish them as needed.
- Non-NFDRS weather stations, such as portable or research stations that support fire operations are required to receive annual calibration and certification. The equipment will meet the requirements of the Annual Rehabilitation Maintenance Section of the NWCG Interagency Wildland Fire Weather Station Standards and Guidelines (PMS 426-3) publication.
- The maintenance will be documented in the WFMI Weather module.

**Weather Station Naming Conventions**

To ensure the continuity with historic records, the names of existing stations should not be changed without a good justification. Proposed name changes must have the concurrence of the BIA national fire weather program manager.
• New weather stations should be named after the nearest local geographic feature.
• Portable RAWS stations will use the following naming conventions: The Unit ID and the word “Port” followed by a sequential number. For example, the portable RAWS at Crow Agency is named MTCRA_Port1, where “MTCRA” represents Crow Agency in Montana and “Port1” represents a unique number to identify the station. If another portable RAWS was deployed at Crow Agency, the name of that station would then be MTCRA_Port2. Portable stations should not be renamed when relocated on the unit or temporarily assigned to another unit.
• For weather data collection and archiving standards for NFDRS, refer to the NWCG Interagency Wildland Fire Weather Station Standards and Guidelines NWCG Standards for Fire Weather Stations (PMS 426-3) publication and the WIMS Web Application User Guide.

When any station (i.e., including portable stations) is desired to be moved to a different location, specific processes identified in the NWCG Interagency Wildland Fire Weather Station Standards and Guidelines NWCG Standards for Fire Weather Stations (PMS 426-3) must be adhered to. The LPOC must first notify the BIA National RAWS Coordinator before notifying the BLM RAWS Depot Help Desk (208-387-5475) to make notification that the station is to be shutdown. Following the relocation, the LPOC must again first notify the BIA National RAWS Coordinator before informing the RAWS Depot Help Desk with the new location information and the time of reactivation.

Station Identifiers
When a station identifier is needed, contact the BIA National RAWS Coordinator (405-206-1854), who will coordinate the request with the appropriate entities, including the GACC Predictive Services staff.

Weather Module in Wildland Fire Management Information (WFMI)

Weather Module Access
• The WFMI Weather Module provides access to the weather data that is transmitted from the more than 2,500 Remote Automatic Weather Stations (RAWS) located throughout the U.S.
• Individuals who desire access to the WFMI Weather Module must complete and submit only sections I and II of the “Weather Module – User Access Request” form to the BIA National RAWS Coordinator. Due to the terms of the BIA’s national RAWS contract, individuals may only request “view-only” access to the weather module. Edit access is restricted to prevent possible contractual issues.
**Program Preparedness**

The wildland fire management program should reference the following agreements, contracts, and operating plans as identified in the Program Planning section above.

**Preseason Agreements, Contracts and Operating Plans**

The authority to enter into Interagency Agreements, Cooperative Agreements, Memorandum of Understanding, Mutual-Aid Agreements and Contracts is cited in *Departmental Manual, Part 620* and respective statues; *Indian Affairs Manual (IAM) 90; the Reciprocal Fire Protection Act 42 U.S.C. 1856*; and is referenced in the *Federal Wildland Fire Management Policy and Program Review*. See Chapter 8 for additional guidance.

**Tribal Disaster Assistance**

On January 29, 2013, the president signed the Sandy Recovery Improvement Act of 2013, which amended the Stafford Act. The Act included a provision to provide federally-recognized Indian Tribal governments the option to request a Presidential emergency or major disaster declaration independent of a state. Tribal governments may still choose to seek assistance under a state declaration request.

FEMA established Tribal liaisons in each FEMA region to assist Tribes with emergency assistance as it relates to providing disaster assistance. Contacts within each Region are identified at [https://www.training.fema.gov/tribal/liaisons.aspx](https://www.training.fema.gov/tribal/liaisons.aspx).

More information about Tribal Declaration and Disaster Assistance resources, is on the FEMA Tribal Affairs web page at [https://www.fema.gov/fema-tribal-affairs](https://www.fema.gov/fema-tribal-affairs).

**Tribal Support for Emergency Support Function (ESF)**

BIA is an *Emergency Support Function (ESF)* support agency under the USDA-FS and USFA ESF #4 and #5 Annexes. Tribes may provide support through this mechanism; however, they must follow their designated reimbursement process to participate under an ESF.

**National Program Preparedness/Readiness Reviews**

Branch of Wildland Fire Management will conduct regularly scheduled fire preparedness review of regional offices. Each review will include fiscal and budget reviews of standard operating procedures (SOP) and administrative activities. A schedule will be developed by BIA-NIFC, with input from the Regions, to coordinate review scheduling. At least one review every five (5) years will be conducted at each region, though more frequent reviews would be preferable. BIA-NIFC’s implementation intentions are to administer one preparedness review and one fiscal accountability review in two separate regions.
every year. Additionally, local unit pre-season fire preparedness/readiness reviews will be conducted.

Standards for preparedness reviews are documented in the Interagency Fire Preparedness Review Guide. The guide is currently available at https://www.nifc.gov/policies/pol_ref_intgncy_prepcheck_BIA.html.

### FireCode Business Rules

The BIA developed business rules and procedures to implement the FireCode System. The FireCode System User Guide and Business Procedures can be accessed through the BIA-NIFC office.

Wildfires on BIA Trust land (BIA/Tribal unit is the host unit) will have an assigned FireCode.

- BIA/Tribe host unit dispatcher will access the FireCode website and enter the incident information and generate a FireCode for every wildfire. This FireCode will be used for all financial obligations charged to an incident and by all resources assigned to an incident. **The FireCode is not the fire number for BIA. The fire number will continue to be the fire reporting number in WFMI. However, the FireCode will be a required entry on the fire report.**
- The FireCode will be used by the BIA in place of the Fire Number when entering an obligation to FBMS. Contract/Compact Tribes will use this code to identify all costs associated with an incident.
- Compact/Contract Tribes will use the FireCode to identify costs for wildfires when reporting to the BIA Regional office.

- **A fire report must be created for each wildfire in WFMI. The fire report form will require the entry of a FireCode.**
- If the wildfire is a false alarm you must create a fire report in WFMI. BIA-NIFC will generate one false alarm FireCode for each region. **The regional false alarm FireCode which will be used for each false alarm fire report.**

Wildfires on BIA Trust lands when BIA/Tribal resources are ordered from another BIA/Tribal unit(s).

- All BIA/Tribal resources responding will use the hosting BIA/Tribal unit’s FireCode to charge all financial obligations related to that wildfire.
- **BIA/Tribal units will create a support action fire report in WFMI when responding to another unit’s wildfire.**
- Compact/Contract Tribes will use the FireCode to identify their respective costs for assistance to other BIA/Tribal units when reporting to the Regional office.

Wildfires on other federal lands when the BIA/Tribe is ordered (another federal agency is the host unit).
• All BIA/Tribal resources responding to other federal agency fires will use a FireCode created by the host federal agency.
• Compact/Contract Tribes will use the FireCode to identify their respective costs for assistance to other federal agencies when reporting to the Regional office.

Wildfires on state lands when the BIA/Tribe is ordered (state agency is the host unit).
• All BIA/Tribal resources responding to state agency wildfires will create a FireCode for each fire if a FireCode has not already been created by another federal agency. If a FireCode has been created, the BIA/Tribal unit(s) will use that FireCode as the charge code (project code) for all financial obligations related to that wildfire.
• BIA/Tribal units will create a support action fire report in WFMI when responding to another unit’s wildfire.
• Compact/Contract Tribes will use the FireCode to identify their respective costs for assistance to state agencies when reporting to the Regional office.

Short-term Severity actions where additional local resources are employed under operations to supplement readiness capability as a direct result of short duration high fire danger on BIA Trust lands.
• BWFM will generate one short-term severity FireCode for each region.
• Each region will use the short-term severity FireCode to cover local short-term severity needs relating to employing additional personnel.
• Request to use the short-term severity FireCode must be made to the Regional FMO, or their acting, and approval given before the FireCode is to be used.

### A support action fire report must be entered in WFMI and the respective FireCode entered in that fire report. The remarks section of the fire report must identify the purpose of the support action. For each short-term severity use through the fire season, a support action fire report must be entered in WFMI.

Long-term Severity FireCodes will be used by BIA resources to identify all costs related to approve BIA wildfire severity actions.
• All severity requests will be submitted to the BWFM for approval. Upon approval, the BWFM will generate a FireCode and notify the Region of the FireCode and authorized funding level.
• The FireCode will be used to charge all authorized financial obligations for readiness under the severity request.
• If a BIA Agency/Tribe responds to another BIA Agency/Tribe’s severity request, the responding BIA Agency/Tribe will use the hosting Agency/Tribal unit’s FireCode to charge all financial obligations.
• Compact/Contract Tribes will use the FireCode to identify their respective severity costs when reporting to the Regional office.
• A support action fire report needs to be completed in WFMI for each severity action.

Casual Training – A FireCode established by the BWFM will be used by all BIA units to charge obligations related to Administratively Determined (AD) or casual workers during field exercises training. BIA units must use the a FireCode with their organizational code to charge obligations for casual field exercises.

### USDA Forest Service Wildland Fire Severity Support – A FireCode will be used by DOI to identify all costs related to support of USDA Forest Service severity actions.

• The FireCode will be used to charge all authorized financial obligations for readiness under the severity request.

• A fire report needs to be completed for severity support of USDA Forest Service severity actions.

Wildland Fire Severity Support to Other Agencies – To account for resource usage and costs incurred when BIA provides severity support to other agencies, the BWFM will generate a separate FireCode for each agency (USFS, BLM, FWS, NPS, and State/Local). In lieu of using the requesting Agency’s own FireCode (if any), the BIA-issued FireCode will be used by BIA units to charge all authorized financial obligations for readiness related to their support of another agency’s severity actions.

Wildland Fire Management Funding

Preparedness Activity

This activity consists of all the actions needed to prepare for the response to wildland fire ignitions. Preparedness funds provide support to the overall management and planning of the Bureau’s and Indian Tribal fire management programs. Preparedness includes, but is not limited to, readiness and capability to provide safe, cost-effective fire management programs in support of land and resource management plans. This activity includes the hiring and training of fire personnel, purchasing/contracting of equipment and supplies, support, planning and coordination, policy development, oversight, and research. Interagency coordination and direction includes establishment and funding of interagency agreements and interagency fair share contributions.

• Indian Tribes are eligible for indirect costs from the wildland fire appropriation for preparedness.

• Wildland Fire Management funding and indirect costs may be included in the Indian Tribal annual funding agreements (AFAs). For compact wildland fire preparedness, wildland fire prevention and interagency hotshot programs, funding shall be transferred to the Office of Self-Governance (OSG) by the BWFM Budget.
• One-time funding or one-time project funding will be applied for annually and distributed to the region for distribution to agencies/Tribes. Funding shall be transferred to the OSG by the BWFM. These are project-based one-time transfers of funds. Indirect costs on non-recurring or one-time wildland fire preparedness funds are not authorized. Indian Tribal and Bureau programs will be given equal consideration for non-recurring preparedness funding and will be coordinated at the Regional Office level.

### Fire Facility Construction and Maintenance Activity

This activity provides for the maintenance and construction of fire facilities for line item funded in the DOI wildland fire appropriation only. All projects are approved through a consolidated DOI process and entered into the Departments five-year plan. The five-year plan is a fiscal year based plan and is part of the overall budget process. The plan requires annual updating so that the budget request continues to reflect a five-year picture of the actual need. As a result, the schedule of activities is based on the fiscal year, not the calendar year. The annual update presents the opportunity for the fire bureaus’ to adjust project priorities based on newly identified needs or previously identified needs that have become more critical during the past year. Projects in the out-years may also be removed because they were addressed through other means. The Bureau’s five-year plan submissions are completed at least a year before Congress enacts the annual appropriation.

Consists of the following:

• Projects for construction of fire facilities must be included in the five-year DOI Facilities Construction Plan and identified as part of the Wildland Fire Annual Budget Appropriation.

• Funding is obtained by Indian tribes through Bureau regional offices via cooperative agreements, contracts or through agreements with other Federal agencies to reimburse Indian tribes for fire facilities construction costs on a project-by-project basis.

• Indirect costs for fire facilities and deferred maintenance construction projects are not authorized. Administrative fees are authorized when requests have them built into the total cost of the construction project as a direct cost.

Suppression Activity

This activity provides for the development and implementation of three operation components: Suppression, Post Wildland Fire Activities and Severity.

• Funding is obtained by Indian Tribes through agreements established by Bureau regional offices or other federal agencies to reimburse Indian Tribes for fire costs on a fire-by-fire basis (per FireCode). Indirect costs for fire suppression are not authorized.
• Severity (short- and long-term) authority and funding for activities necessary to augment initial attack capability when abnormal fire conditions occur throughout a region resulting in the fire season starting earlier than normal, or exceeding average high fire danger ratings for periods. Funding is obtained by Tribes through agreements established by Bureau regional offices or other federal agencies to reimburse Indian Tribes for severity costs incurred under an approved fire severity cost request. Indirect costs for severity funds are not authorized.

• Post Wildland Fire Activities includes all post fire burned area activities covered by approved plans. Funding is obtained by Indian Tribes through agreements established by the Bureau regional offices or other federal agencies to reimburse Indian Tribes for costs on a project by project basis (per FireCode). Indirect costs for emergency stabilization projects are not authorized, however reasonable administrative and overhead costs incurred by Indian Tribes in such projects may be authorized within stabilization plans and should be built into the project and treated as a direct cost.

Interagency Severity Funding Request Procedures

Qualification of Need
To adequately quantify the need for severity funding, at least one of the criteria listed below should demonstrate that abnormal conditions exist. Severity funds and project approval will be identified by a severity FireCode generated by BIA-NIFC. Requests for special projects must be evaluated and approved by the respective Regional Office and forwarded to BIA-NIFC for approval and execution. All costs associated with a severity request must include the severity FireCode when procuring and/or encoding to the Financial Business and Management System (FBMS).

• Fire danger models or analysis software (FireFamily Plus) graphically contrasts the current seasonal trend for ERC and/or BI, with all-time worst and historical average ERC and/or BI, based on an analysis of year-round data.

• Palmer Index or standardized precipitation indices that specify the departure from normal.

• Fuel Loading Quantitative information comparing current to the average.

• Current local fuel moisture compared to average trend and all-time worst provided by Normalized Differences Vegetative Index (NDVI) and/or Live Fuel Moisture Project reports. Note: Data from NDVI and Live Fuel Moisture Project may be a week old or older.

• NWS 30-day weather outlook.

• Weather station NFDRS number and name.

Narrative Statement
Provide a brief statement of the interagency situation (local and geographic). Each agency should request funds only for their respective needs, not for needs of another agency. Sharing resources when all parties have needs is desirable.
When requesting prevention or investigation resources, the following information must be included:

- Human-Caused Fire Activity; number of human-caused fires to date as compared to previous years, include fire cause category;
- Description of how the team will be utilized; shared resource covering multiple areas, etc.;
- Any significant upcoming events or activities; and
- Justification for additional funds for prevention materials or supplies.

Severity requests for prevention/investigation resources are to be reviewed by the Regional WUI/Prevention Specialist.

**Requested Resources**

Requested resources should be identified by type, quantity, and cost using the severity cost estimation worksheet. Utilize the Prevention tab for requesting prevention/investigation resources.

**Budget Management**

This section governs use of the Bureau’s Wildland Fire Management (WFM) appropriation account structure, procedures, cost accounting and one-time funding procedures. Personnel at all levels within the Bureau need to be aware of the responsibilities and limitations on the use of these funds, which this chapter and other financial and budget handbooks address.

**Program Budget Annual Appropriations**

Annual appropriations are made available for the WFM, pursuant to the passage of the annual appropriation act for the DOI and related agencies. The WFM appropriation is a no-year appropriation.

**Funded Program Procedures**

WFM funds, excluding emergency suppression funding (unless under a Continuing Resolution), will be distributed to the BWFM Budget Management office, which distributes funds to WFM Regional Office programs. The exception to the allocation is compacted programs which will be disbursed directly from WFM-NIFC to OSG. Instructions documented on a financial allocation forms (e.g., Funding Entry Document or FED) detail how distributions are to be made from regions to Agencies/Tribes for preparedness programs.

**One-Time Funding /Critical Needs**

The one-time Funding program provides mechanisms to request funding for special projects or needs that exceed an agency’s regular budgeted funds. Funds used in this program are non-recurring in nature, and are based on either available prior year un-obligated balances, or unused Indirect costs.

### WFM will issue a memo annually during the second quarter with a standard form that will identify timelines for current year. The Individual plans are

Release Date: January 2020
required to be submitted to Regional offices for review, changes or rejection. Once approved at the regional level, the requests will be forwarded to WFM. Critical needs projects are high priority or an activity ready for implementation, and require immediate funding at the start of the FY, before appropriations bills are signed. Critical needs should only cover three (3) months of project needs, but will continue under Continuing Resolutions (CR) until an appropriations bill is passed.

One-time funding for Preparedness (signed by appropriate Regional Director) will be submitted to WFM by May 15 Budget Officer no later than May 15th for the upcoming Fiscal Year for current year needs. Requests received after deadlines will be given lower priority. WFM-NIFC will evaluate all requests based on the region’s prioritization and the availability of funds.

Procedures for One-Time Funding Submission

One-time funding requests must be submitted using the following process:
- Requests are submitted to the Regional Office for approval. The process verifies the request meets the intent and fire policy of Interior appropriation act language.
- The Regional Office then submits prioritized funding requests to the Branch of Wildland Fire Management Budget office.
- WBS to be assigned by WFM-NIFC Budget or the DC Central Office.

The Model 52 Wildland Engine program was created by the BIA in 1996. The objective of the program is to provide a centralized process for replacement parts, and training and fabrication of Model 52 pumping systems. Detailed information on the program can be found in the BIA National Model 52 Wildland Engine Program Operations Guide.

Mission/Policy
- Provide a standardized Model 52 engine for the participating Agency or Tribal organization.
- Provide an opportunity to supply trucks for Model 52 pumping systems.
- Provide repair services for Fire Management Planning Analysis (FMPA) approved number of engines.
- Provide training in the use and maintenance of the Model 52 pumping systems.
- Evaluate new equipment and Model 52 improvements to meet the wildland fire program needs.
- Provide emergency repair or replacement for Model 52 pumping systems.
- No aftermarket parts of any kind are to be place on any Model 52 equipment without prior approval from the Deputy, Fire Operations and concurrence from the Program Center Managers.
### Vehicle Maintenance, Replacement and Repairs

Daily preventative maintenance checks, regular servicing, and prompt repairs, and lifecycle replacement are critical to providing mission readiness, performance, and safe operation.

### Annual Safety Inspections, Scheduled Maintenance, and Daily Inspections

It is required to complete and document annual safety inspections, regularly scheduled preventative maintenance and daily (or pre-trip) inspections for all BIA wildland fire vehicles. Annual safety inspections must be documented on Form 1520-35 or designated local form. Regularly scheduled preventative maintenance, unscheduled maintenance and repairs for interior owned (I-plate) vehicles are recorded in FBMS. Daily inspections must be kept with the vehicle records for the life of that vehicle.

The cost of all vehicle repairs and maintenance is the responsibility of the individual region, agency or Tribe unless the damage is directly attributable to operations on a wildfire. In that case, with approval from the IC, the damages may be paid for under the fire’s suppression account.

Wildland fire vehicles that are not operationally sound or have safety deficiencies must not be put into service. In addition, vehicles that suffer from mechanical or safety issues while en route or on assignment must be taken out of service at the earliest opportunity in which it is safe to do so and must not be put back into service until corrective action can be completed.

### Replacement Guidelines

BIA Model 52 replacement schedule (funding pending) GSA Standards updated replacement schedule is set as follows:

<table>
<thead>
<tr>
<th>Model 52 Type</th>
<th>Life Cycle</th>
<th>Distance</th>
</tr>
</thead>
<tbody>
<tr>
<td>Type 6</td>
<td>8 Years</td>
<td>100,000 Miles</td>
</tr>
<tr>
<td>Type 4</td>
<td>12 Years</td>
<td>100,000 - 250,000 Miles</td>
</tr>
</tbody>
</table>

### Organization

The program is organized into three geographical areas:

- **Northwest Center (Missoula, MT)** Missoula, MT services the Northwest, Rocky Mountain and north half of the Pacific Region.
- **Northern Center (Eagle Butte, SD)** Eagle Butte, SD services the Great Plains, Midwest, and Eastern Regions.
- **Southwest Center (Dulce, NM)** Dulce, NM services the Southwest, Western, Navajo, Eastern Oklahoma, Southern Plains, and south half of the Pacific Region.

### Administration

The program is administered through the BWFM Fire Operations Section. A Model 52 Oversight Group has been established to plan, develop and budget for the annual operations of the program. The Group is comprised of the Model 52 Program Leads at each center and the Deputy, Fire Operations. Trucks and
fabrication orders for the Model 52 are procured nationally through the BIA-NIFC office.

Emergency Repairs
Emergency fire related repairs to a BIA Model 52 pumping package will be requested through the assigned user area Model 52 Center. The request will be reviewed and approved by the Center Manager before a Service Truck is dispatched or replacement parts are sent to the requesting agency.

Non-Emergency/Non-Suppression Repairs
Non-emergency repairs shall be charged to the identified agency account. The account will be approved by an agency official (e.g., FMO, Forest Manager, Superintendent) before requested action is taken.

Authorization of account will be sent by email or signed fax identifying account, name and title of authorizing official. Initial request for all non-emergency repairs will be requested through the assigned user area Model 52 Center. The request will be reviewed and approved by the Center Manager before a Service Truck is dispatched or replacement part is mailed to the requesting agency.

All Emergency and Non-Emergency repair expenditures shall be charged to an appropriate account.

### Administration
The program is administered through the BWFM Fire Operations Section. A Model 52 Oversight Group has been established to plan, develop and budget for the annual operations of the program. The Group is comprised of the Model 52 Program Leads at each center and the Deputy, Fire Operations. Trucks and fabrication orders for the Model 52 are procured nationally through the BIA-NIFC office.

### Fire Facility Construction and Maintenance Activity
This activity provides for the maintenance and construction of fire facilities for line item funded in the DOI wildland fire appropriation only. All projects are approved through a consolidated DOI process and entered into the Department’s five-year plan. The five-year plan is a fiscal year based plan and is part of the overall budget process. The plan requires annual updating so that the budget request continues to reflect a five-year picture of the actual need. As a result, the schedule of activities is based on the fiscal year, not the calendar year. The annual update presents the opportunity for the fire bureaus’ to adjust project priorities based on newly identified needs or previously identified needs that have become more critical during the past year. Projects in the out-years may also be removed because they were addressed through other means. The Bureau’s five-year plan submissions are completed at least a year before Congress enacts the annual appropriation.
Consists of the following:

- Projects for construction of fire facilities must be included in the five-year DOI Facilities Construction Plan and identified as part of the Wildland Fire Annual Budget Appropriation.
- Funding is obtained by Indian Tribes through Bureau regional offices via cooperative agreements, contracts or through agreements with other federal agencies to reimburse Indian Tribes for fire facilities construction costs on a project-by-project basis.
- Indirect costs for fire facilities and deferred maintenance construction projects are not authorized. Administrative fees are authorized when requests have them built into the total cost of the construction project as a direct cost.

National Aviation Program

The BIA Wildland Fire and Aviation Management program recommends Bureau policy, procedures, and standards; and maintains functional oversight and interagency coordination for all aviation activities. The BIA-BWFM established two Inter-Regional Aviation Management Offices to provide technical aviation expertise support for Regional, Agency, and field offices. Each of these offices supports Bureau Regions across geographic boundaries. Each of the Inter-Regional offices is staffed by an IRAM and an AOS, both of which are available to provide support for any Region.

Aviation Program Goals

The primary goals of each of these positions are to promote aviation safety and cost-effectiveness. The Branch of Wildland Fire Management Director, Aviation and Safety supports Bureau aviation activities and missions, which includes fire suppression, through strategic program guidance, managing aviation programs of national scope, coordination with Office of Aviation Services (OAS) and interagency partners.

The Director, Aviation and Safety has the responsibility and authority, after consultation with Regional FMOs, for funding and acquisition of all fire aircraft, prioritizing the allocation of BIA aircraft on a Bureau wide basis, and approving Regional Office requests to acquire supplemental aircraft resources.

Refer to Indian Affairs Manual; Part 57 for information on BIA aviation policy and procedures. Refer to 112 DM 12 for a list of responsibilities.

Regional Office Level

Regional FMOs are responsible for providing oversight for aircraft hosted in their region and have the authority and responsibility to approve, with the WFM Branch Chief concurrence, acquisition of supplemental aircraft resources within their region.
Regional FMOs have the authority to prioritize the allocation, pre-positioning and movement of all aircraft assigned to the BIA within their region.

Regional Offices will coordinate with the National Office on movement of their aircraft outside of their region.

Regional Aviation Managers (RAM) are associated with every BIA Region. They implement aviation program objectives and directives to support the BIA mission and each Region’s goals. Some Regions may have additional support staff assigned to support aircraft operations and to provide technical expertise. A Regional Aviation Management Plan is required to outline goals of the Region’s aviation program and to identify policy and procedures specific to that Region.

Important Note: A Region is not generally authorized to supplement this policy with more restrictive policy or procedures than the national policy, unless the policy or procedure is approved by the Director, Aviation and Safety.

Agency/Field Office Level

Agency, Field Managers and staff manage their programs as necessary to conduct their aviation operations safely. Agency Aviation Managers (AAMs) serve as the focal point for the Agency Aviation Program by providing technical expertise and management of aviation resources to support agency programs.

While many agencies have aviation management as a collateral duty, during periods of intense aviation activity (e.g., wildland fire support) it is still absolutely critical that aviation oversight be maintained.

When other duties interfere or compete with effective aviation management, request assistance from the Regional Office. Agencies are responsible for hosting, supporting, providing daily management, and dispatching all aircraft assigned to their unit. Agencies have the authority to request additional resources, establish priorities, and make assignments for all aircraft assigned to the BIA within their agency.

AAMs have the responsibility for aviation activities at the local level, including aviation mission planning, risk management and safety, supervision, and evaluation. AAMs assist Line Officers with risk assessment/management and cost analysis.

All Tribal and agency offices utilizing aircraft should have a current and approved aviation management plan on file.

Aviation Safety

The BIA and the interagency partners have adopted Safety Management Systems (SMS) as the foundation to our aviation safety program. For further information, reference Chapter 16.

Flight Request and Approval
Bureau flights will be requested and documented using the process defined in the Regional or Agency Aviation Plans. As a minimum, flight management procedures will follow the National Interagency Mobilization Guide, Chapter 80, Flight Management Procedures. The BLM Aircraft Flight Request/Schedule (9400-1a) form is one example which may be used.

Safety and Risk Management

Motor Vehicle Operation Policy

### All individuals operating a motor vehicle in performance of duties in support of the BIA must comply with the requirement of the BIA Motor Vehicle policy requirements 5 CFR 930, and 485 DM 16. Regional Directors, Agency Superintendents, and FMO’s will be responsible for ensuring full compliance, including safe operation of motor vehicles as well as immediate response to issues of non-compliance. Non-standard vehicle training will be provided to fire personnel required to drive Model 52 engines, Helitack and Crew vehicles.

Effective immediately, the Bureau requires supervisors to ensure all wildland fire personnel who operate government owned and/or leased vehicles have the proper licensure and are adhering to their respective state laws and licensing requirements, prior to operating any government owned and/or leased vehicles. This includes ensuring employees have the appropriate commercial driver's license, tank endorsements, air brake endorsements and other applicable certifications. Additional resources regarding BIA driving requirements can be found under Motor Vehicle Information on the Branch of Wildland Fire Management, Fire Safety web page: https://www.bia.gov/bia/ots/dfwfm/bwfm/safety.

On January 1, 2021, the BL-300 course will become mandatory for all wildland fire management and support personnel who operate vehicles. Course material is accessible at: https://www.nifc.gov/training/trainingFireVehicle.html.

### Lights and Siren Response

Responding to BIA wildfire incidents normally does not warrant the use of emergency lights and siren to safely and effectively perform the BIA mission. However, there may be rare or extenuating circumstances when limited use of lights and sirens are appropriate and necessary due to an immediate threat to life.

Those BIA Regions that determine a lights and sirens response is necessary to meet mission requirements must develop an operating plan that is signed and approved by the Regional Director and forwarded to the Chief, Division of Fire Operations, BIA. The operating plan must ensure the following:

1. All vehicles (command, engines, etc.) will be properly marked, equipped, and operated in accordance with state statutes, codes, permits, and BIA unit requirements.
2. Drivers will complete training in the proper use of lights and sirens in response in accordance with National Fire Protection Association (NFPA) 1451 and 1002 standards, as well as any state requirements.

3. Engine drivers responding with lights and sirens will be minimally qualified as engine operator with a qualified engine boss in the engine; otherwise, driver must be engine boss qualified. Command vehicle drivers will be minimally qualified as single resource boss.

4. Lights and sirens will meet NFPA and state code requirements.

5. Posted speed limits will be followed at all times, regardless of response type.

6. Operators will stop or reduce speed as circumstances dictate prior to proceeding through all intersections.

7. Traffic light changing mechanisms (e.g., Opticons) will only be used under formal written agreement with state and local governments. They will be used only when they are necessary to create safe right-of-way through urban high-traffic areas. All pertinent state and local statutes and procedures will be adhered to.

8. Authorization to respond with lights and sirens does not cross state lines. No driver will be authorized by one state to operate with lights and sirens in another state.

### Physical Fitness and Conditioning

The NWCG Standards for Wildland Fire Position Qualifications (PMS 310-1) establishes physical fitness standards for NWCG sanctioned firefighters. These standards are assessed using the Work Capacity Tests (WCT). Prior to attempting the WCT, all permanent, career-seasonal, temporary, Student Career Experience Program (SCEP), and AD/EFF employees who participate in wildland fire activities requiring a fitness level of arduous must participate in the DOI Medical Qualification Standards Program (DOI MSP).

Employees serving in wildland fire line-going positions that require a fitness rating of arduous, moderate or light are authorized to perform physical fitness conditioning for up to five hours per week, not to exceed more than 2 hours per day.

Units will maintain a fitness program that ensures BIA firefighters will possess the physical ability to perform the duties of their positions safely and effectively while ensuring compliance with the requirements of the Work Capacity Test (WCT).

Information on the WCT and the DOI MSP is located in Chapter 13 of this publication. Fitness and conditioning information may be found at https://www.nifc.gov/FireFit/index.htm.
Business Management and Administration

The BIA follows the uniform application (IAM Part 90, 1.2, (18)) of the interagency policies and guidelines as developed in the NWCG Standards for Interagency Incident Business Management. BIA will follow the direction set forth in the NWCG Standards for Interagency Incident Business Management in all incident business management functions except where specific to agency legal mandates, policies, rules or regulations.

Casuals Hired as Drivers When Employed by BIA

In accordance with the BIA Motor Vehicle Policy, casuals hired as drivers are required to possess a valid driver’s license in order to operate a motor vehicle and have a safe driving record.

Agencies should recruit a pool of drivers prior to fire season. They must submit GSA Form 3607, Government Motor Vehicle Operator’s License and Driving Record, in advance to verify they have a favorable driving record.

- Form 3607 will be processed through Regional channels to retrieve the driving record of the application with the State, or National Driver Registry and applicable Tribe.
- Regional Directors can contact the Division of Safety and Risk Management for information on completing and submitting Form 3607.
- Meeting the qualification requirements for a motor vehicle license is a condition of employment within BIA for those individuals whose duties require the operation of a motor vehicle for official wildland fire operations business. Failure to adhere to the policy will result in automatic termination of the casual.

Request for Funding Authorization

The authorization and procedure for use of the operations “suppression” (AF2001010) program account, for emergency workers field activities is as follows.

- A regional funding request plan must be completed that identifies the program need for casual funding for field activities only;
- The request must be submitted through the Regional FMO by January 1st of each year; and
- The requests will be reviewed and authorized in writing to the respective agency.

Acquisitions

Per 90 IAM, the WFM program requires adherence to the NWCG Standards for Interagency Incident Business Management in conducting wildland fire business. The BIA Branch of Fire Management’s waiver for fire/emergency personnel purchases are cited in Memoranda Expanded Government Charge Card
Purchased Authority During Emergency Wildland Fire Operations, dated 6/12/03 at https://www.bia.gov/nifc/library/Memos/index.htm. The exceptions are:

- Meals, Beverages and Lodging – This exception will be used to lodge and feed employees without credit cards or to support mixed charge card/non-charge card crews.
- Personal Gear – This exception will be used to purchase personal items if destroyed, lost or stolen while serving on the fire crew/emergency incident, (e.g., clothing, footwear and/or toiletries).
- Payment of medical treatment for casuals and overhead when authorized for Incident Agency Provided Medical Care (APMC).

**Emergency Equipment Rental Agreements (EERA)**

The Emergency Equipment Payment Operating Guidelines provides procedure, guidance and instructions to the BIA WFM Programs, Regional fire management offices and agency offices, Office of Financial Management, Office of Acquisition and Property for implementation of the EERAs payment process. Refer to the *NWCG Standards for Interagency Incident Business Management*, Chapter 20, for EERA Administration.

**Wildland Fire Decision Support System (WFDSS)**

BIA follows interagency policy regarding use of WFDSS found in Chapter 11.

**Fuels Management, Planning & Implementation**

The national and interagency policy guides for Fuels Management programs are contained in the following guides and handbooks:

- BIA Fuels Management Program Supplement to the Interagency Prescribed Fire Planning and Implementation Procedures Reference Guide 2008; and
- Chapter 17 – NFES 2724, Interagency Standards for Fire and Fire Aviation Operations (Red Book).

Exclusive use of these handbooks and guides enhances intra- and inter-agency program continuity, avoids duplication, reduces the chances to misinterpret policy and provides one stop shopping for the fuels programs policy in a fire management and political environment where changes occur frequently. Please call the Director of Fuels Management for more information.

**Prescribed Fire Review**

The goal of a Prescribed Fire Review is to provide recommendations, identify deficiencies and specific corrective actions. Reviews do not have to be associated with a specific incident.
Any Prescribed Fire related incident that has resource or property damage that may result in a claim for compensation shall initiate a review. The review team and their expertise should be commensurate with the scope, and focus of the review. Interagency participation is encouraged with team selection.

### Fire Communications and Education

**Early Alert Notification Process**

Early Alerts will be made via phone call and a written Early Alert Notification. All units (federal and tribal) will provide information to the Regional Fire Management Office and the Branch of Wildland Fire Management Duty Officer within six hours of the incident:

- Crew Supervisor notifies the Unit Fire Management Officer (FMO)
- Unit FMO notifies Regional Fire Management Officer (RFMO) and Dispatch Center. If time allows, generates Early Alert Notification.
- Dispatch Center: If 4th tier, notifies 3rd tier Dispatch Center who then notifies the Geographic Area Coordination Center.
- Regional Fire Management Officer (RFMO) will immediately notify the Branch of Wildland Fire Management On-Call Duty Officer at: 208-387-5087 AND within six hours, email to: EarlyAlert@bia.gov.

**Situations Requiring an Early Alert Notification**

- Fatality
- Injury Requiring Transports to Medical Facility
- Significant Property Damage to Equipment
- Serious Wildland Fire Accident
- Wildland Fire Accident
- Entrapment/ Burnover
- Shelter Deployment
- Near-miss
- Aviation accident
- Evacuations
- Highway and interstate closures
- Structure loss
- Escape prescribed fire
- Fire approaching Large Fire thresholds (100 acres in timber; 300 acres in grass)
- Any Wildland Fire Management Delegation of Authority issued by a line officer

The Early Alert Notification Communication Process, Template and PMS 405-1 are accessible online at: https://www.bia.gov/bia/ots/dfwfm/bwfm/safety.
### Notification Requirements for Entrapments or Fatalities

If a wildland fire entrapment or fatality occurs, immediate notification to the National Interagency Coordination Center (NICC) is required using the Wildland Fire Entrapment/Fatality Initial Report (PMS 405-1). Following the issuance of an Early Alert, the local unit will provide the PMS 405-1 to the 3rd tier Dispatch Center which will then provide it to the Geographic Area Coordination Center (GACC) electronically within 24 hours. The GACC immediately notifies the NICC Coordinator on Duty (COD) and within 24 hours, submits the PMS 405-1 to NICC COD.

### Wildland Fire Media Relations Guidance

During dynamic events such as wildland fire, providing accurate information is critical for public safety. To be effective, communication must be timely, if not immediate. For this reason news bulletins and routine fire information pertaining to the topics listed below are authorized for media release on behalf of the BIA, Branch of Wildland Fire Management (DFWFM). For cases that may include multiple agency jurisdictions, these releases are also approved for use. The DFWFM media release template and approved supporting fire messages can be found online at https://www.bia.gov/bia/ots/dfwfm/bwfm/fire-information.

Introduction

The primary means by which we prevent accidents in wildland fire operations is through aggressive risk management. Our safety philosophy acknowledges that while the ideal level of risk may be zero, a hazard free work environment is not a reasonable or achievable goal in fire operations. Through organized, comprehensive, and systematic risk management, we will determine the acceptable level of risk that allows us to provide for safety yet still achieve fire operations objectives. Risk management is intended to minimize the number of injuries or fatalities experienced by wildland firefighters.

Policy

Firefighter and public safety is our first priority. All Fire Management Plans and activities must reflect this commitment. The commitment to and accountability for safety is a joint responsibility of all firefighters, managers, and administrators. Every supervisor, employee, and volunteer is responsible for following safe work practices and procedures, as well as identifying and reporting unsafe conditions.

Agency-specific Safety Policy Documents:
- **BLM** – BLM Handbook 1112-1, DOI Occupational Safety and Health Program – Field Manual
- **NPS** – DO-50 and RM-50 Loss Control Management Guideline
- **FS** – FSM 5100 and chapters, FSH-6709.11 Health and Safety Code Handbook

For additional safety guidance, refer to:
- **Wildland Fire Incident Management Field Guide** (PMS 210)
- **Incident Response Pocket Guide** (IRPG) (PMS 461, NFES 1077)

Guiding Principles

The primary means by which we implement command decisions and maintain unity of action is through the use of common principles of operations. These principles guide our fundamental wildland fire management practices, behaviors, and customs, and are mutually understood at every level of command. They include Risk Management, Standard Firefighting Orders and
Watch Out Situations, LCES and the Downhill Line Construction Checklist.

These principles are fundamental to how we perform fire operations, and are intended to improve decision making and firefighter safety. They are not absolute rules. They require judgment in application.

Goal

The goal of the fire safety program is to provide direction and guidance for safe and effective management in all activities. Safety is the responsibility of everyone assigned to wildland fire, and must be practiced at all operational levels from the national fire director, state/regional director, and unit manager to employees in the field. Agency Administrators need to stress that firefighter and public safety always takes precedence over property and resource loss. Coordination between the fire management staff and unit safety officer(s) is essential in achieving this objective.

Definitions

Safety: A measure of the degree of freedom from risk or conditions that can cause death, physical harm, or equipment or property damage.

Hazard: A condition or situation that exists within the working environment capable of causing physical harm, injury, or damage.

Risk: The likelihood or possibility of hazardous consequences in terms of severity or probability.

Risk Management: The process whereby management decisions are made and actions taken concerning control of hazards and acceptance of remaining risk.

Risk Management Process

Fire operations risk management is outlined in the NWCG Incident Response Pocket Guide (IRPG). The five step process provides firefighters and fire managers a simple, universal, and consistent way to practice risk management by:

• Establishing situation awareness by identifying hazards.
• Assessing hazard potential.
• Developing hazard controls and making risk management decisions.
• Implementing hazard controls.
• Supervising implementation and evaluating effectiveness.

Job Hazard Analysis (JHA)/Risk Assessment (RA)

A completed JHA/RA is required for:

• Jobs or work practices that have potential hazards.
• New, non-routine, or hazardous tasks to be performed where potential hazards exist.
• Jobs that may require the employee to use non-standard personal protective equipment (PPE).
• Changes in equipment, work environment, conditions, policies, or materials.

Supervisors and appropriate line managers must ensure that established JHAs/RAs are reviewed and signed prior to any non-routine task or at the beginning of the fire season.

• BLM – Additional RA information can be obtained at:

• FWS – See also 240 FW 1, Exhibit 1, Job Hazard Assessment.

• FS – JHAs must include a description of the emergency medical procedures, identification of key individuals, and actions that will be taken to ensure prompt and effective medical care and evacuation. See FSH 6709.11, section 21.1 for more information. The FS Operational Risk Management Guide, process and forms for conducting a RA can be found on the USDA Forest Service Operational Risk Management website: https://bit.ly/OperationalRiskManagement website for Risk Management at https://www.fs.fed.us/managing-land/fire/safety.

Work/Rest

To mitigate fatigue, Agency Administrators, fire managers, supervisors, Incident Commanders, and individual firefighters should plan for and ensure that all personnel are provided a minimum 2:1 work/rest ratio (for every 2 hours of work or travel, provide 1 hour of sleep and/or rest). Work shifts that exceed 16 hours and/or consecutive days that do not meet the 2:1 work/rest ratio should be the exception. When this occurs, the following actions are required:

• Personnel will resume 2:1 work/rest ratio as quickly as possible.
• The Incident Commander or Agency Administrator will justify work shifts that exceed 16 hours and/or consecutive days that do not meet 2:1 work to rest ratio. Justification will be documented in the daily incident records, made available to the employee by the Finance Section/local unit, and must include mitigation measures used to reduce fatigue.
• The Time Officer’s/Unit Leader’s approval of the Emergency Firefighter Time Report (OF-288), or other agency pay document, certifies that the required documentation is on file and no further documentation is required for pay purposes.

The work/rest guidelines do not apply to aircraft pilots assigned to an incident. Pilots must abide by applicable Federal Aviation Administration (FAA) guidelines, or agency policy if more restrictive.
Length of Assignment

Assignment Definition

An assignment is defined as the time period (days) between the first full operational period at the first incident or reporting location on the original resource order and the last day worked prior to commencement of return travel to the home unit.

Length of Assignment

Standard assignment length is 14 days, exclusive of travel from and to home unit, with possible extensions identified below. Time spent in staging and preposition status counts toward the 14-day limit, regardless of pay status, for all personnel, including Incident Management Teams.

14-Day Scenario

Days Off

To assist in mitigating fatigue, days off are allowed during and after assignments. Agency Administrators (incident host or home unit) may authorize time off supplementary to mandatory days off requirements.

After completion of a 14-day assignment and return to the home unit, two mandatory days off will be provided (2 after 14). Days off must occur on the calendar days immediately following the return travel in order to be charged to the incident (See Section 12.1-2) (5 U.S.C. 6104, 5 CFR 610.301-306, and 56 Comp. Gen. Decision 393 (1977). If the next day(s) upon return from an incident is/are a regular work day(s), a paid day(s) off will be authorized. Regulations may preclude authorizing this for non-NWCG and state/local employees.

Pay entitlement, including administrative leave, for a paid day(s) off cannot be authorized on the individual’s regular day(s) off at their home unit. Agencies will apply holiday pay regulations, as appropriate. A paid day off is recorded on home unit time records according to agency requirements. Casuals (AD) are not entitled to paid day(s) off upon release from the incident or at their point of hire.

Contract resources are not entitled to paid day(s) off upon release from the incident or at their point of hire.

- BLM/FWS – After completion of a 14-day assignment and return travel, the mandatory days off will be charged to Administrative Leave if they fall on a regularly-scheduled work day.

Release Date: January 2020
Home unit Agency Administrators may authorize additional day(s) off with compensation to further mitigate fatigue. If authorized, home unit program funds will be used. All length of assignment rules apply to aviation resources, including aircraft pilots, notwithstanding the FAA and agency day off regulations.

**Assignment Extension**

Prior to assigning incident personnel to back-to-back assignments, their health, readiness, and capability must be considered. The health and safety of incident personnel and resources will not be compromised under any circumstance.

Assignments may be extended when:
- Life and property are imminently threatened.
- Suppression objectives are close to being met.
- A military battalion is assigned.
- Replacement resources are unavailable, or have not yet arrived.

Upon completion of the standard 14-day assignment, an extension of up to an additional 14 days may be allowed (for a total of up to 30 days, inclusive of mandatory days off, and exclusive of travel).

**21-Day Scenario**

A 21-day assignment is exclusive of travel from and to home unit. Time spent in staging and preposition status counts toward the 21-day assignment, regardless of pay status, for all personnel, including Incident Management Teams.

**30-Day Scenario**

An assignment longer than 22 days is exclusive of travel from and to home unit. Time spent in staging and preposition status counts toward the assignment, regardless of pay status, for all personnel, including Incident Management Teams. For an assignment exceeding 21 days, two mandatory days off will be provided prior to the 22nd day of the assignment.

Contracts, Incident Blanket Purchase Agreements (I-BPA), and Emergency Equipment Rental Agreements (EERA) should be reviewed for appropriate pay requirements and length of assignment. If the contract, I-BPA, or EERA do not address this, the incident Finance/Administration Section Chief or the procurement official should be consulted as to whether compensation for a day off is appropriate.
SAFETY AND RISK MANAGEMENT CHAPTER 7

Single Resource/Kind Extensions
The section chief or Incident Commander will identify the need for assignment extension and will obtain the affected resource’s concurrence. The section chief and affected resource will acquire and document the home unit supervisor’s approval.

The Incident Commander approves the extension. If a convened Geographic or National Multi-Agency Coordinating Group (GMAC/NMAC) directs, the Incident Commander approves only after GMAC/NMAC concurrence.

If the potential exists for reassignment to another incident during the extension, the home unit supervisor and the affected resource will be advised and must concur prior to reassignment.

Incident Management Team Extensions
Incident Management Team extensions are to be negotiated between the incident Agency Administrator, the Incident Commander, and the GMAC/NMAC (if directed).

Maximum Consecutive Days Worked – Home Unit
During extended periods of activity at the home unit, personnel will have a minimum of 1 day off in any 21-day period.

Driving Standard
All employees driving motor vehicles are responsible for the proper care, operation, maintenance, and protection of the vehicle, and to obey all federal and state laws.

The use of government-owned, rented, or leased motor vehicles is for official business only. Unauthorized use is prohibited.

General Driving Policy
- Employees must have a valid state driver’s license in their possession for the appropriate vehicle class before operating the vehicle. Operating a government-owned or rental vehicle without a valid state driver’s license is prohibited.
- All drivers whose job duties require the use of a motor vehicle will receive initial defensive driver training within three months of entering on duty and refresher driver training every three years thereafter.
  ○ BLM/FS – Driver training is required prior to operating a vehicle for official purposes.
- All traffic violations or parking tickets will be the operator’s responsibility.
- All driving requiring a CDL will be performed in accordance with applicable Department of Transportation regulations.
- Drivers and all passengers are required to use provided seat belts at all times when the motor vehicle is in motion.
Employees operating a motor vehicle that meets any of the following criteria must possess a valid Commercial Driver’s License (CDL) with all of the applicable endorsements:

- Has a gross combination weight rating or gross combination weight of 26,001 pounds or more, whichever is greater, inclusive of a towed unit(s) with a gross vehicle weight rating or gross vehicle weight of more than 10,000 pounds, whichever is greater; or
- Has a gross vehicle weight rating or gross vehicle weight of 26,001 pounds or more, whichever is greater; or
- Is designed to transport 16 or more passengers, including the driver; or
- Is of any size and is used in the transportation of hazardous materials.

Hazardous materials means any material that has been designated as hazardous under 49 U.S.C. 5103 and is required to be placarded under subpart F of 49 CFR part 172 or any quantity of a material listed as a select agent or toxin in 42 CFR part 73.

○ **BLM** – BLM Form 1112-11 will be used to document every fire and aviation employee’s authorization to drive government vehicles or to drive private or rental vehicles for government business. BLM Form 1112-11 replaces form OF-345, form DI-131, and any equivalent form that has been created for local or state level use. Employees are required to self-certify their physical ability to operate vehicles which they are authorized to use. Drivers of vehicles that require a Commercial Driver’s License may be required to have additional driver, medical, and fitness testing as required by local and/or state laws. Employees will immediately inform their supervisor and update BLM Form 1112-11 if a change in medical condition impedes their driving ability or if a state driving privilege is restricted for any reason. Supervisors will review the updated form and take appropriate action as necessary. BLM Form 1112-11 is available at:

○ **DOI** – Employees under the age of 21 that possess a CDL may operate wildland fire vehicles under the following condition to operate Commercial Motor Vehicles (CMV) across state lines for Interstate Commerce purposes under the following conditions:

  - Drivers under the age of 21 with a CDL may only drive within the state that issued the CDL and must comply with that state’s special requirements and endorsement. Drivers with a CDL may operate a Commercial Motor Vehicle (CMV) in accordance with the issuing authority (i.e., the State) that issued the CDL and must comply with the issuing authority’s CMV operational requirements and any special requirements and endorsements applicable to the CMV license classification of the CDL holder; and
  - Supervisors must annually establish and document that those drivers have a valid driver’s license (i.e., that the license has not
been suspended, revoked, canceled, or that he/she has not been
otherwise disqualified from holding a license – 485 DM 16.3D
(1)), have the ability to operate the vehicle(s) safely in the
operational environment assigned (485 DM 16.3B (2)), and review
and validate the employee’s driving record (485 DM 16.3D (4)).

○ **BLM/NPS/FWS** – Employees, volunteers, and contractors (for BLM,
this includes cooperators) are prohibited from using any mobile
voice/data communication or electronic data retrieval device while
operating a government owned, leased, or rented vehicle or while
operating a personally-owned vehicle for official government business,
and are further prohibited from using any government-owned mobile
communication or data retrieval device while operating a personally-
owned vehicle. Government purchased two-way radios are exempt from
this requirement. The use of any of these devices during an emergency
situation (immediate threat to life) is limited to the extent necessary to
convey vital information. When there is a passenger in the vehicle and
the vehicle is in motion, the passenger shall manage communications to
prevent driver distraction.

○ **NPS** – For NPS employees engaged in activities other than wildfire or
prescribed fire, refer to the current NPS Official Travel Driving Policy
for restrictions.

○ **FS** – Policy requires all operators of government owned, or leased
vehicles to have a Forest Service issued Operator’s Identification Card
(OF-346) indicating the type of vehicles or equipment the holder is
authorized and qualified to operate.

○ **FS** – Drivers shall not engage in cellular phone or mobile radio
communications while the vehicle is in motion unless actively engaged
in an emergency such as wildland firefighting. During non-emergency
situations, the driver shall identify a safe location to stop the vehicle
and then engage in cellular phone or mobile radio communications.
These restrictions apply whether or not hands-free technology is
available.

**Non-Incident Operations Driving**
Refer to the current driving standards for each individual agency.

**Mobilization and Demobilization**
To manage fatigue, every effort should be made to avoid off unit (excluding IA
response) mobilization and demobilization travel between 2200 hours and 0500
hours.

**Incident Operations Driving**
This policy addresses driving by personnel actively engaged in wildland fire or
all-hazard activities; this includes driving while in support, mobilization, and
demobilization to an assigned incident, or during initial attack fire response
(includes time required to control the fire and travel to a rest location).
• Agency resources assigned to an incident or engaged in initial attack fire response will adhere to the current agency work/rest policy for determining length of duty day.
• No driver will drive more than 10 hours (behind the wheel) within any duty-day.
• Multiple drivers in a single vehicle may drive up to the duty-day limitation provided no driver exceeds the individual driving (behind the wheel) time limitation of 10 hours.
• A driver shall drive only if they have had at least 8 consecutive hours off duty before beginning a shift. Exception to the minimum off-duty hour requirement is allowed when essential to:
  ○ Accomplish immediate and critical suppression objectives.
  ○ Address immediate and critical firefighter or public safety issues.
• As stated in the current agency work/rest policy, documentation of mitigation measures used to reduce fatigue is required for drivers who exceed 16 hour work shifts. This is required regardless of whether the driver was still compliant with the 10 hour individual (behind the wheel) driving time limitations.

Fire Vehicle Operation Standards
Operators of all vehicles must abide by state traffic regulations. Operation of all vehicles will be conducted within the limits specified by the manufacturer. Limitations based on tire maximum speed ratings and GVWR restrictions must be followed. It is the vehicle operator’s responsibility to ensure vehicles abide by these and any other limitations specified by agency or state regulations.

Management Controls to Mitigate Risks to Responders
Management controls, engineering controls, equipment guards, and administrative procedures are the first line of defense against exposing an employee to a hazard. Personal protective equipment (PPE) will be used to protect employees against hazards that exist after all management controls are exhausted.

Wildland Fire Field Attire
Polyester, polypropylene, and nylon materials are not to be worn, because most synthetic fibers melt when exposed to flame or extreme radiant heat. Personnel should wear only undergarments made of 100 percent or the highest possible content of natural fibers, aramid, or other flame-resistant materials.

Personal Protective Equipment (PPE)
All personnel are required to use personal protective equipment (PPE) appropriate for their duties and/or as identified in JHAs/RAs. Employees must be trained to use safety equipment effectively.
Flame resistant clothing should be cleaned or replaced whenever soiled, especially when soiled with petroleum products. Flame resistant clothing will be replaced when the fabric is so worn as to reduce the protection capability of the garment or is so faded as to significantly reduce the desired visibility qualities.

Any modification to personal protective equipment that reduces its protection capability such as iron-on logos, and staggering of pants, is an unacceptable practice and will not be allowed on fires.

**Required Fireline PPE**

- Wildland fire boots
- Fire shelter (M-2002)
- Helmet with chinstrap
- Goggles/safety glasses (as identified by JHAs/RAs)
- Ear plugs/hearing protection
- National Fire Protection Association (NFPA) 1977 compliant long-sleeved flame resistant shirt (yellow recommended)
- NFPA 1977 compliant flame resistant trousers
- Leather or leather/flame resistant combination gloves. Flame resistant flight gloves or NFPA 1977 compliant Driving Gloves can be used by heavy equipment operators, drivers and fireline supervisors when not using fireline hand tools.
- Additional PPE as identified by local conditions, Safety Data Sheet (SDS), or JHA/RA
  - FS – Shirt, trousers, and gloves used by USFS personnel must meet Forest Service specification 5100-91 (shirt), 5100-92 (trousers), 6170-5 (gloves), or be NFPA 1977 compliant.

**Wildland Fire Boot Standard**

Personnel assigned to wildland fires must wear a minimum of 8-inch high, lace-type exterior leather work boots with lug melt-resistant soles. The 8-inch height requirement is measured from the bottom of the boot’s heel to the top of the boot. Alaska is exempt from the lug sole requirement.

All boots that meet the wildland fire boot standard as described above are required for firefighting and fireline visits, considered non-specialized PPE, and will be purchased by the employee (including AD/EFF) prior to employment. The agencies have authorized payment of a boot stipend. See agency specific guidance for implementation.

**Fire Shelters**

Training in inspection and deployment of fire shelters will be provided prior to issuance. Fire shelters do not have a shelf life; serviceability depends on the shelter’s condition. Firefighters will inspect their shelter at the beginning of each fire season and periodically throughout the year to ensure they are serviceable. Inspection criteria can be found here: https://www.fs.fed.us/t-d/php/library_card.php?p_num=1151%202301P.

Training shelters will be deployed at required Annual Fireline Safety Refresher Training. No live fire exercises for the purpose of fire shelter deployment training will be conducted.

Fire shelters will be carried in a readily accessible manner by all line personnel. The deployment of shelters will not be used as a tactical tool. Supervisors and firefighters must never rely on fire shelters instead of using well-defined escape routes and safety zones. When deployed on a fire, fire shelters will be left in place if it is safe to do so and not be removed pending approval of authorized investigators. Firefighters must report the shelter deployment incident to their supervisor as soon as possible.

Head Protection
Personnel must be equipped with helmets and wear them at all times while in the fire area. Helmets must be equipped with a chinstrap, which must be fastened while riding in, or in the vicinity of, helicopters. Acceptable helmets for fireline use must meet NFPA 1977 Standard on Protective Clothing and Equipment for Wildland Fire Fighting requirements.

• BLM – Helmets and hats used for protection from impact of falling and flying objects and from limited electric shock and burn must meet the specifications of American National Standards Institute Z89.1-2009. Equivalent ### hardhat helmet meeting ANSI Z89.1-2009 Type 1, Class G or NFPA 1977.

Helmets consist of the shell and the suspension, which work together as a system. Both components require frequent inspection and maintenance. Detailed helmet inspection procedures can be found at https://www.nwcg.gov/committees/equipment-technology-committee.

Eye and Face Protection
The following positions require the wearing of eye protection (meets ANSI Z87.1 Standards):

• Nozzle operator
• Chainsaw operator/faller
  o The ANSI Z87.1 eye and face protection will be worn during all chainsaw operations involving cleaning and fueling. Steel mesh safety goggles are allowed only during falling and bucking chainsaw/crosscut saw operations.
  o Steel mesh glasses are not allowed for any chainsaw operations.
• Helibase and ramp personnel
SAFETY AND RISK MANAGEMENT

• Wildland fire chemical mixing personnel

• Other duties may require eye protection as identified in a specific JHA/RA

Full-face protection in the form of a face shield in compliance with ANSI Z87.1 shall be worn when working in any position where face protection has been identified as required in the job-specific JHA/RA: Batch Mixing for Terra-Torch®, power sharpener operators, etc.

Hearing Protection
Personnel who are exposed to a noise level in excess of 85db must be provided with, and wear, hearing protection. This includes, but is not limited to:

• Chainsaw operators/fallers
• Pump operators
• Helibase and aircraft ramp personnel
• Wildland fire chemical mixing personnel

Other duties may require hearing protection as identified in a specific JHA/RA.

Employees may be required to be placed under a hearing conservation program as required by 29 CFR 1910.95. Consult with local safety and health personnel for specifics regarding unit hearing conservation programs.

Neck Protection
Face and neck shrouds are not required PPE. The use of shrouds is not required and should be as a result of onsite risk analysis. If used, face and neck shrouds shall meet the requirements of FS specification 5100-601 or NFPA 1977 Standard on Protective Clothing and Equipment for Wildland Fire Fighting.

Shrouds should be positioned in a manner that allows for immediate use. For additional information see MTDC Tech Tip Improved Face and Neck Shroud for Wildland Firefighters, 2004 (0451-2323-MTDC) at https://www.fs.fed.us/t-d/pubs/htmlpubs/htm04512323/index.htm.

Leg Protection
All chainsaw operators will wear chainsaw chaps meeting the United States Forest Service Specification 6170-4F or 4G. Swampers should wear chaps when the need is demonstrated by a risk analysis considering proximity to the sawyer, slope, fuel type, etc. All previous Forest Service specification chainsaw chaps must be removed from service. Chainsaw chaps shall be maintained in accordance with MTDC Publication, Inspecting and Repairing Your Chainsaw Chaps – User Instructions (0567-2816-MTDC) available at https://www.fs.fed.us/t-d/pubs/htmlpubs/htm05672816/page01.htm.

Respiratory Protection
Respiratory protection should only be implemented once engineering and administrative controls are exhausted. The need for respiratory protection during
wildland fire operations must be determined by each agency. The requirements for respirator use are found in 29 CFR Part 1910.134.

Only NIOSH-approved respirators shall be used. Several respiratory-type products are marketed to wildland firefighters but are not NIOSH-approved (e.g., shrouds with filtration devices).

Managers and supervisors will not knowingly place wildland firefighters in positions where exposure to toxic gases or chemicals that cannot be mitigated and would require the use of self-contained breathing apparatus.

Managers will not sign cooperative fire protection agreements that would commit wildland firefighters to situations where exposure to toxic gases or chemicals would require the use of self-contained breathing apparatus.

• **FS** – FSM 5130, Self-Contained Breathing Apparatus – Wildland firefighters may use only SCBA which are compliant with NFPA 1981, Standard on Open-Circuit Self-Contained Breathing Apparatus (SCBA) for Emergency Services. SCBA may only be used when contaminants from vehicle, dump, structure, or other non-wildland fuel fire cannot be avoided while meeting wildland fire suppression objectives (29 CFR 1910.134, Respiratory Protection). If such an apparatus is not available, avoid exposure to smoke from these sources. The acquisition, training, proper use, employee health surveillance programs, inspection, storage, and maintenance of respiratory protection equipment must comply with applicable National Fire Protection Association standards and 29 CFR 1910.134, and be justified by a Job Hazard Analysis or Risk Assessment (RA). Where the acquisition and use of an SCBA is approved, it may be carried only on a fire engine and its use must be consistent with FSM 5130.

Specialized or Non-Standard Personal Protective Equipment (PPE)

Specialized PPE not routinely supplied by the agency (e.g., prescription safety glasses, static-resistant clothing, cold weather flame resistant outerwear, etc.) required to perform a task safely must be procured in accordance with agency direction, and supported by a JHA/Risk Assessment.

A JHA/Risk Assessment must be completed and reviewed by the Unit Safety Officer and the supervisor’s approval is required. Items must meet agency and industry standards for specific intended use. Cold weather flame resistant outerwear shall be in compliance with NFPA 1977, Standard on Protective Clothing and Equipment for Wildland Fire Fighting. All cold weather inner wear should be composed of 100% or the highest possible content of natural fibers (cotton, wool or silk) or other flame resistant material such as aramid.

**High Visibility Vests**

In order to meet 23 CFR 634, high visibility apparel should be worn whenever a firefighter is working on or in the right of way of a public roadway.
Employees must wear high visibility safety apparel that meets ANSI/ISEA 107-2004, Class 2 or 3, or ANSI/ISEA 207-2006.

Exceptions
The high visibility safety apparel should not be worn if:
- There is a reasonable chance that the employee may be exposed to flames, high heat, or hazardous materials.
- The high visibility garment hinders an employee’s ability to do their job because it prevents necessary motion or because it limits access to necessary equipment such as radios or fire shelters.

Additional information is available in the Missoula Technology and Development Center (MTDC) report, *High-Visibility Garments and Worker Safety on Roadways* (1251-2818P-MTDC) at [https://www.fs.fed.us/t-d/pubs/htmlpubs/htm12512818/](https://www.fs.fed.us/t-d/pubs/htmlpubs/htm12512818/).

Fireline Safety

Incident Briefings
Fire managers must ensure that safety briefings are occurring throughout the fire organization, and that safety factors are addressed through the IC or their designee and communicated to all incident personnel at operational briefings. The identification and location of escape routes and safety zones must be stressed. A briefing checklist can be found in the *Incident Response Pocket Guide* (IRPG).

LCES – A System for Operational Safety
LCES will be used in all operational briefings and tactical operations as per the *Incident Response Pocket Guide (IRPG).*
- L – Lookout(s)
- C – Communication(s)
- E – Escape Route(s)
- S – Safety Zone(s)

Right to Refuse Risk
Every individual has the right to turn down unsafe assignments. When an individual feels an assignment is unsafe, they also have the obligation to identify, to the degree possible, safety alternatives for completing that assignment. The *IRPG* contains a process for properly refusing risk.
### Aerial Drop Safety Considerations

- Maintain prompt communications with aerial resources. Prioritize air-to-ground as appropriate.
- Establish a designated monitor for air-to-ground communications. Specific drops may not be accomplished unless communications are maintained and clearance is assured. Keep informed of the aerial firefighting objectives, tempo and aircraft type.
- Anticipate when line clearance may be requested. Tempo can change very quickly as aerial resources become available. Anticipate the clearance requirement based on the volume of delivery.
- Evaluate the environment for gravity hazards (tree limbs, rocks, logs and dispensed retardant/water). Broken trees and tree limbs, rolling rocks and logs all move with gravity. If clearance is downhill of the drop, heightened awareness is warranted.
- If clearance is impractical, where fuels and/or terrain obstruct lateral clearance, notify aerial supervisor or the initial attack resource immediately.
- If escape is not possible, lie face-down with head toward incoming aircraft with hardhat in place. Hold hand tool away from your body, and if possible, grasp something firm to prevent being carried or rolled about by the dropped liquid.

Smoke and Carbon Monoxide

It is important to note that smoke is just one of the potential risks faced by wildland firefighters. Site-specific hazards and mitigations need to be identified (using JHA/RA) to reduce firefighter exposure to smoke and potential carbon monoxide which includes evaluating and balancing all the risks associated with the operational objectives.

From an incident management perspective, smoke impacts need to be analyzed and a risk assessment completed using the ICS-215A, Incident Action Plan Safety Analysis worksheet. For additional information, reference NWCG memorandum EB-M-12-006, Monitoring and Mitigating Exposure to Carbon Monoxide and Particulates at Incident Base Camps at https://www.nwcg.gov/executive-board/correspondence. Ordering Air Resource Advisors should be considered when smoke impacts are of concern in the ICS-215A.

Location of Fire Camps and Plans to Remain in Place

Fire camps should be located in areas that will service the incident for the long term without having to relocate. Due to such factors as extreme fire behavior, fire camp locations might be compromised. Incident Commanders are to be especially vigilant to quickly identify situations that may put their fire camp(s) or any other adjacent fire camps in jeopardy. As such, planning for evacuation and/or remain in place actions should be considered. Evacuation plans at a minimum shall include:

- Documented risk assessment
• Trigger points
• Egress routes
• Transportation for all personnel
• Accountability for all personnel
• Those individuals not meeting PMS 310-1 qualifications will be considered escorted visitors as addressed elsewhere in this chapter.
  ○ FS – At a minimum, plans shall also include:
    ▪ ICP protection strategy referenced in the IAP.
    ▪ Live-ability considerations including air quality index guidelines, functionality of location and facilities, and safety factors for post burn conditions.

Standard Safety Flagging
The NWCG recommends the following Safety Zone/Escape Route flagging for wildland fire activities:
• Hot-pink flagging marked “Escape Route” (NFES 0566). crews with colorblind members may wish to carry and utilize fluorescent chartreuse flagging (NFES 2396).
• Hazards. Yellow with black diagonal stripes, 1-inch wide (NFES 0267). If the above recommendation is not utilized on an incident, the incident will need to identify the selected color and make it known to all firefighters.

Emergency Medical Planning and Services
To provide for quick and effective response, all units (including dispatch centers) will develop and implement plans that specify emergency procedures, actions, and roles/responsibilities to ensure injured personnel are provided prompt and effective medical care and evacuation.

Incident Medical Emergency Management Planning
In 2010, NWCG approved the standardized incident emergency protocol developed by the Dutch Creek Serious Accident Task Team, and issued direction that these emergency medical procedures be adopted by all IMTs during daily operations.
• Although some of the procedures are specific to larger Type 1 and Type 2 incidents when key unit leader positions are filled, these same procedures and protocols can be adapted for local unit use when managing Type 5, 4, and 3 incidents as well as during normal field operations. Local unit emergency medical plans must take into account all types and management levels of incidents.
• All IMTs will use the standard Medical Incident Report in their Medical Plan and Communication protocols. It is found in the IRPG under Emergency Medical Care Guidelines (red pages) and with the Medical Plan (ICS-206-WF) form available at https://www.nwcg.gov/publications/ics-forms.
To achieve successful medical response, Agency Administrators will ensure that their units have completed the following items prior to each field season:

- A Medical Emergency Plan that identifies medical evacuation options, local/county/state/federal resource capabilities, capacities, ordering procedures, cooperative agreements, role of dispatch centers, and key contacts or liaisons.
- Standardized incident and communication center protocols identified in the Medical Incident Report section of the IRPG.
- For incidents that require the preparation of an IAP, Form ICS-206-WF will be used. This form is available at https://www.nwcg.gov/publications/ics-forms.

**Air Ambulance Coordination**

Unit and state/regional-level fire program managers should ensure that procedures, processes, and/or agreements for use of local and regional air ambulance services are stated in writing and effectively coordinated between the fire programs, the dispatch/logistics centers, and the service providers. These procedures, processes, and/or agreements should address contact frequencies, coordinate format requirements, and capabilities/limitations of the air ambulance (e.g., night flying, unimproved helispots, weather restrictions).

**Incident Emergency Medical Services**

Incident medical information can be found on the NWCG Incident Emergency Medical Subcommittee website at https://www.nwcg.gov/committees/incident-emergency-medical-subcommittee. NWCG has published Clinical Treatment Guidelines for Wildland Fire Medical Units (PMS 551). These guidelines establish a national approach for medical care during large incidents that expand the typical emergency management services (EMS) scope of practice to include the mission of managing and maintaining the health and wellness of wildland fire personnel. These guidelines are available at https://www.nwcg.gov/committees/incident-emergency-medical-subcommittee under Guides and Agency Policies.

Home units that choose to utilize and support higher level medical responders to provide medical support for internal agency medical emergencies (beyond basic first aid/CPR) may do so; however, certification and credentialing must follow respective state laws and protocols unless there is other agency direction.

**Required Treatment for Burn Injuries**

The following standards will be used when any firefighter sustains burn injuries, regardless of agency jurisdiction.

After on-site medical response, initial medical stabilization, and evaluation are completed, the Agency Administrator or designee having jurisdiction for the incident and/or firefighter representative (e.g., Crew Boss, Medical Unit Leader, Compensations for Injury Specialist, etc.) should discuss and coordinate with the
attending physician to ensure that a firefighter whose burn injuries meet any of the following burn injury criteria is appropriately referred to the nearest regional burn center. Burn injuries are often difficult to evaluate and may take 72 hours to manifest themselves. When there is any doubt as to the severity of or if criteria are met for a burn injury, the recommended action is to work closely with the treating physician to facilitate either a digital picture or telemedicine consult with a burn center or the referral and transport of the burned employee to the nearest burn center. It should be kept in mind, however, that not all burns require referral to a burn center. Special consideration should be given to referring a burned firefighter to a burn center if there is poor pain control during care at the medical facility. The following criteria from the American Burn Association (ABA) are meant to help guide the patient referral decision process.

The decision to refer a firefighter not meeting the following criteria to a regional burn center is made directly by the attending physician or may be requested of the physician by the Agency Administrator or designee having jurisdiction and/or firefighter representative after discussing medical follow-up beyond the ER. A possible solution is a referral to a burn center out-patient clinic for follow-up care after the ER visit.

After initial medical stabilization and evaluation are completed in a medical facility, the decision to refer the employee to a specialty care physician/facility is made only by the attending physician. Workers Compensation benefits may be denied in the event the employee is transported to a specialty care physician/facility without a referral from the attending physician after already being seen by a medical provider. A report prepared by a Physicians’ Assistant must be countersigned by a physician to be accepted as medical evidence. A definition of “physician” can be found at https://www.dol.gov/owcp/dfec/regs/compliance/DFECfolio/FECA-PT3/#30100.

The Agency Administrator or designee for the incident will coordinate with the employee’s home unit to identify a workers compensation liaison to assist the injured employee with workers compensation claims and procedures.

During these rare events, close consultation must occur between the attending physician, the firefighter, the Agency Administrator or designee and/or firefighter representative, the firefighter’s physician (if they have one), and the burn center to assure that the best possible care for the burn injuries is provided.

ABA Burn Injury Criteria

- Partial thickness burns (second degree) involving greater than 10% Total Body Surface Area (TBSA).
- Burns (second degree) involving the face, hands, foot, genitalia, perineum, or major joints.
- Third-degree burns of any size are present.
- Electrical burns, including lightning injury, or chemical burns are present.
• Inhalation injury is suspected.
• Burn injury in someone with preexisting medical disorders that could 
  complicate management, prolong recovery or affect mortality (e.g., 
  diabetes).
• Any patient with burns and concomitant trauma (such as fractures) in which 
  the burn injury poses the greatest risk of morbidity or mortality. In such 
  cases, if the trauma poses the greater immediate risk, the patient may be 
  initially stabilized in a trauma center before being transferred to a burn unit. 
  Physician judgment will be necessary in such situations and should be in 
  concert with the regional medical control plan and triage protocols.
• Burn injury in someone who will require special social, emotional or 
  rehabilitative intervention (PTSD, severe anxiety, etc.).

Severity Determination
• **First Degree** (Superficial) Red, sometimes painful.
• **Second Degree** (Partial Thickness) Skin may be red, blistered, swollen, 
  painful to very painful.
• **Third Degree** (Full Thickness) Whitish, charred, or translucent, no pin 
  prick sensation in burned area.

Percentage Total Body Surface Area (TBSA) – Rule of 9s or Rule of Palms
Rule of 9s (pictures on previous page): The body is divided into sections of 9 
percent, or multiples of 9 percent, each as per the drawing.

Rule of Palms: Patient’s palm equals 1% of their body surface. Estimate how 
many times the patient’s palm could be placed over the burned areas to estimate 
the percentage of body that has been burned.

A map as well as a search engine of burn care facilities can be found at 
http://ameriburn.org/public-resources/find-a-burn-center/.
For additional NWCG incident emergency medical information see https://www.nwcg.gov/committees/incident-emergency-medical-subcommittee under Guides and Agency Policies.

Explosives, Munitions, and Unexploded Ordinance

When encountering explosives, munitions, unexploded (UXO), or suspected UXO, never pick up, handle, uncover, or touch suspected explosives or military munitions. Retreat and secure the area from entry. Immediately notify the local dispatch office, and gather as much information as possible from a safe distance.

Gather the following information and provide it to the dispatch center:

- Location of the explosive/munitions using a map, GPS coordinates, or landmarks (use of a GPS receiver is acceptable because it is a receive-only device).
- Picture of the explosive if it can be obtained from a safe distance.
- Who discovered the explosive/munitions and how they can be contacted.
- Condition of the explosive/munitions (e.g., buried, partially exposed, fully exposed, deteriorated, or punctured).
- Number and type of explosive/munitions visible (e.g., blasting caps, dynamite, bomb, grenade, etc.).
- Estimated size of explosive/munitions (e.g., length and diameter).
- Distinctive features of explosive/munitions (e.g., shape, color, markings).
- Nearby structures, if any (so inhabitants can be contacted and evacuated if necessary).
- Public access to the vicinity (i.e., open or closed to motor vehicles).

Never spend more time near munitions, suspected explosives, or UXO than is absolutely necessary. Only collect the above information as long as it is safe to do so from a distance. Never compromise safety to collect information.

Notifications

Local dispatch centers are responsible for notifying:

- Agency law enforcement;
- Unit safety officer;
- Agency Administrator; and
- Local law enforcement.

Discovery of Explosives/Munitions/UXO Associated with Former Defense Sites

The military retains liability and responsibility for munitions removal and for remedial actions on all lands transferred (or transferring) from the military to the land management agencies, and is responsible for explosives safety at former defense sites. The military must be notified for all UXO on these lands.
Local law enforcement is responsible for contacting the appropriate military authority. If the responsible military unit is unknown, then local law enforcement should contact the U.S. Army Forces Command (FORSCOM), 52nd Ordnance Group (EOD), at its 24-hour emergency response number, (931) 431-3824.

For additional UXO safety information, see the current IRPG.

**Industrial and Naturally Occurring Hazardous Materials Exposure**

Firefighters can potentially be exposed to hazards in the wildland fire environment. Encountered hazards can be both human and environmentally borne.

This section provides information and mitigations for most commonly encountered industrial and naturally occurring potential exposures. Recognizing there may be unique/area specific hazardous exposures (e.g., fungus causing valley fever, erionite, coal seams), the following standards apply to all hazards:

- Identifying unit-specific environmental hazards;
- Develop Risk Assessments/Job Hazard Analyses (RA/JHAs) for those hazards;
- Develop and provide specific training and standard operating procedures (SOPs);
- Provide briefings/training for those who may be exposed;
- If exposure is suspected, immediately disengage and leave the area; and
- Seek immediate medical attention if exposure symptoms occur.

**Hazardous Materials Response**

Hazardous materials response or control is not a functional responsibility of wildland fire suppression resources. These incidents have tremendous potential to cause significant health and life safety issues. In order to protect the health and safety of agency personnel, no employee shall be directed, or dispatched (including self-dispatching) to an incident involving hazardous materials unless they are provided with the required personal protective equipment and the appropriate certification level. Agency personnel on incidents involving hazardous material will limit their actions to those emergency services necessary for the immediate protection of themselves and the public and the prompt notification of appropriate public safety agencies. All wildland firefighters who are likely to witness or discover hazardous substances are required to complete their agency’s First Responder Awareness (Level I) program.

**Dump and Spill Sites**

Employees that discover any unauthorized waste dump or spill site that contains indicators of potential hazardous substances (e.g., containers of unknown substances, pools of unidentifiable liquids, piles of unknown solid materials, unusual odors, or any materials out of place or not associated with an authorized activity) should take the following precautions:
• Follow the procedures in the IRPG;
• Treat each site as if it contains harmful materials;
• Do not handle, move, or open any container, breathe vapors, or make contact with the material;
• Move a safe distance upwind from the site;
• Contact appropriate personnel. Generally, this is the Hazardous Materials Coordinator for the local office; and
• Firefighters need to immediately report hydrogen sulfide (H₂S) or potential exposure and seek immediate medical care.
  ○ BLM/NPS/FWS – Agencies require that all field personnel complete First Responder Awareness training. Firefighters are required to take an annual refresher for Hazardous Material protocol.

The following general safety rules shall be observed when working with chemicals:
• Read and understand the Safety Data Sheets.
• Keep the work area clean and orderly.
• Use the necessary safety equipment.
• Label every container with the identity of its contents and appropriate hazard warnings.
• Store incompatible chemicals in separate areas.
• Substitute less toxic materials whenever possible.
• Limit the volume of volatile or flammable material to the minimum needed for short operation periods.
• Provide means of containing the material if equipment or containers should break or spill their contents.

Wildland Fires In or Near Oil/Gas Operations
For units with oil and gas operations within their jurisdiction, the following are the minimum standard operating procedures to help ensure the health and safety of wildland firefighters:
• Firefighters shall receive annual oil and gas hazard recognition and mitigation training;
• Local unit shall complete a JHA/RA for wildland fire activities in oil and gas areas and provide a copy with a briefing to all local and incoming resources;
• Establish Response Protocols and proper decontamination procedures to minimize exposure to additional employees, equipment, and facilities. Protocols will include notification procedures to respective oil and gas company(s);
• Ensure oil and gas resource advisors are consulted;
• Ensure that at least one member of each squad or engine crew is knowledgeable in the use and data interpretation of the H₂S gas monitor. Training on the device will include at a minimum:
  ○ Equipment charging and maintenance of sensors;
CHAPTER 7

Wildland Fires In or Near Radioactive Locations

Abandoned uranium mines and other potential radioactive sites exist in many areas of public lands. When these areas are identified, local management should provide information and direction on operations to be used. General knowledge and understanding of potential radiation exposure is necessary for wildland fire program management to make valid risk management decisions in these areas.

The following websites provide this information and general guidelines:

Wildland Fires In or Near Coal Seams

Coal is naturally occurring black or brownish rock usually located in rock strata in layers or veins, coal beds or coal seams. Exposed coal seams are abundant through southeast and central Montana, western North Dakota, South Dakota, and Alaska. A coal seam fire is the smoldering of an exposed or underground coal deposit.

**Risks:** Coal seam fires pose a serious problem that can be a hazard to firefighter’s health and safety. Coal seam fires can emit toxic gases, including carbon monoxide, sulfur dioxide and other potentially hazardous gases.

Carbon Monoxide is a colorless, odorless and tasteless gas that can be highly toxic. Sulfur Dioxide is a colorless gas with a characteristic of an irritating, pungent odor and is also highly toxic. Some symptoms of exposure to these...
gases may include headaches, nausea, dizziness, fatigue, shortness of breath, coughing and eye irritation.

Because of the variances in symptoms and exposure levels, seek medical attention for a complete diagnosis if firefighters have been exposed to toxic gases from coal seam fires and symptoms persist. Additionally firefighters exposed to coal ash, smoke or vapor should trade in their PPE for fresh PPE. Individually bag PPE that has been contaminated.

**Required Actions/Precautions:** Firefighters are typically not equipped or trained for coal seam fires and should not attempt to extinguish such fires with hand tools and engines.

Putting water on coal seam fires is normally useless. Mitigation crews will need to excavate the burning coal seam and mix the hot material with soil and water to cool. The area can be reclaimed by backfilling the seam and re-vegetating the disturbed area.

Signs of a coal seam fire may include a rotten egg smell, smoking white ash and continuous or non-continuous lines of what appears to be smoldering black rock (coal) where the flame may or may not be visible. Avoid low lying terrain in known coal seam fire areas especially early morning when air temps are cool. Gas tends to sink when air is cool and will accumulate in low lying areas.

Do not depend on sense of smell to detect coal seam fires. At high concentrations the sense of smell will be almost immediately overwhelmed or become numb. At lower levels, the sense of smell will slowly deteriorate as levels build in the blood stream. Do not stand downwind of coal smoke under any conditions especially during suppression operations.

Report the location of all coal seam fires to the incident commander or supervisor. ICs should notify agency representatives of locations of coal seam fires. Agencies should have resource advisors notify incoming incident command teams and firefighting resources of known locations of exposed coal seams, coal mines or abandoned coal mines adjacent to ongoing incidents and the risks and precautions to take when working around coal seam fires.

**Hazardous Water Sources**

Many water sources used during wildland fire operations may appear harmless, but contain hazardous materials (e.g., hydraulic fracturing fluid, cyanide, sewage, corrosives). These hazardous water sources may pose threats to personnel health and firefighting equipment. Indicators that a water source may be hazardous include proximity to active or inactive mining operations, gas/oil wells, water treatment facilities, or other industrial operations. In many cases, these hazardous water sources may not be fenced and no warning signs may be present.

Fire personnel should evaluate water sources to ensure they do not contain potentially hazardous materials. If unsure of the contents of a water source,
personnel should not utilize the water source until its contents can be verified. Dispatch centers, Resource Advisors, or on-scene personnel can assist with verification of safe water sources. Information about known hazardous water sources should be included in operational briefings.

**Hydrogen Cyanide (HCN) Exposure**

Synthetic materials such as plastics, nylon, Styrofoam®, and polyurethane can produce HCN. HCN exposure can disrupt the body’s ability to use oxygen, cause asphyxia, and cause carbon monoxide poisoning. Common items such as sofas, carpeting, vehicles, and other products routinely found in the wildland can produce smoke with HCN.

Symptoms of HCN poisoning include bitter almond odor on breath, burning taste in mouth, stiffness of lower jaw, feeling of numbness or constriction in throat, weakness, and headache.

Follow hazardous materials protocols contained in the IRPG to mitigate exposure to HCN. If personnel may have been exposed to HCN, immediate referral to a health care facility capable of toxicology testing and treatment of HCN exposure is required.

**Safety for Personnel Visiting Fires**

A wide variety of personnel such as Agency Administrators, other agency personnel, dignitaries, members of the news media, etc., may visit incidents. The following standards apply to all visitors.

**Visits to Incident Base Camps or Non-Fireline Field Locations**

Recommended field attire includes:

- Lace-up, closed toe shoes/boots with traction soles and ankle support.
- Trousers.
- Long-sleeve shirt.
- For agency personnel, the field uniform is appropriate.

**Fireline Logistical Support**

Personnel performing fireline logistical support duties (e.g., bus drivers, supply delivery/retrieval, incident drivers, non-tactical water delivery, etc.) must meet the following requirements:

- Complete fire shelter training.
- Required Fireline PPE as referenced in the personal protective equipment section of this chapter.
- Receive an incident briefing.
- Ensure adequate communications are established.
- Other requirements (if any) established by the Incident Commander.
- A Work Capacity Test (WCT) is not required unless required for a specific position defined in the PMS 310-1.

Release Date: January 2020
Minimum Requirements for Visits to the Fireline/RX Burns

Visits (such as media visits or political/administrative tours) to hazardous areas of the fire or areas that pose a fire behavior threat will be managed by meeting the requirements below:

- Visits to the fireline must have the approval of the IC/Burn Boss.
- Visitors must maintain communications with the DIVS or appropriate fireline supervisor of the area they are visiting.
- Required fireline PPE as referenced in the personal protective equipment section of this chapter.
- Required field attire:
  - Undergarments made of 100 percent or the highest possible content of natural fibers or flame-resistant materials.
- Required equipment/supplies:
  - Hand tool.
  - Water canteen.

Visitors to the fireline/RX burns may be “Non-Escorted” or “Escorted” depending on the following requirements:

Non-Escorted Visits

Visitors must have an incident qualification with a minimum physical fitness level of “light” to visit the fireline unescorted.

- Must have adequate communications and radio training.
- Completed the following training:
  - Introduction to Fire Behavior (S-190).
  - Firefighter Training (S-130).
  - Annual Fireline Safety Refresher Training, including fire shelter training.
- Deviation from these requirements must be approved by the IC or Burn Boss.

The law enforcement physical fitness standard is accepted as equivalent to a “light” WCT work category.

Escorted Visits

All visitors lacking the above training and physical requirements must be escorted while on the fireline.

- Visitors must receive training in the proper use of Fireline PPE.
- Requirement for hand tool and water to be determined by escort.
- Visitors must be able to walk in mountainous terrain and be in good physical condition with no known limiting conditions.
- Escorts must be minimally qualified as Single Resource Boss.
- Deviation from these requirements must be approved by the IC or Burn Boss.

Helicopter Observation Flights
Visitors who take helicopter flights to observe fires must receive approval from the Incident Commander, a passenger briefing, and meet the following requirements:

- **Required PPE:**
  - Flight helmet
  - Leather boots
  - Flame-resistant clothing
  - All leather or leather and aramid gloves

Occasional passengers/visitors have no training requirement, but a qualified flight manager must supervise loading and unloading of passengers.

### Fixed-Wing Observation Flights

No PPE is required for visitors and agency personnel who take fixed-wing flights to observe fires. However, a passenger briefing is required, and the flight level must not drop below 500 feet AGL.

### 6 Minutes for Safety Training

It is recommended that daily 6 Minutes for Safety training be conducted that focuses on high-risk, low frequency activities that fire personnel may encounter during a fire season. A daily national 6 Minutes for Safety briefing can be found at https://www.nwcg.gov/committees/6-Minutes-for-safety or within the National Incident Management Situation Report.

### SAFENET

SAFENET is a form, process, and method for reporting and resolving safety concerns encountered in any aspect (e.g., preparedness, training, etc.) of wildland fire or all hazard incident management. The information provided on the form will provide important, safety-related data to the National Interagency Fire Center, and determine long-term trends and problem areas.

The objectives of the form and process are:

- To provide immediate reporting and correction of unsafe situations or close calls in wildland fire.
- To provide a means of sharing safety information throughout the fire community.
- To provide long-term data that will assist in identifying trends.
- Primarily intended for wildfire and prescribed fire situations, however, SAFENET can be used for training and all hazard events.

Individuals who observe or who are involved in an unsafe situation shall initiate corrective actions if possible, and then report the occurrence using SAFENET. You are encouraged, but not required, to put your name on the report.

Prompt replies to the originator (if name provided), timely action to correct the problem, and discussion of filed SAFENETs at local level meetings encourage program participation and active reporting.
SAFENET is not the only way to correct a safety-related concern and it does not replace accident reporting or any other valid agency reporting method. It is an efficient way to report a safety concern. It is also a way for front line firefighters to be involved in the daily job of being safe and keeping others safe, by documenting and helping to resolve safety issues. SAFENETs may be filed:

- Electronically at https://safenet.nifc.gov;
- Verbally by telephone at 1-888-670-3938; or
- By SAFENET Field Card.

The SAFENET Field Card can be used by wildland fire personnel to immediately identify and report unsafe situations or close calls that should receive immediate resolution/mitigation. If the situation cannot be resolved at the local/incident level, the reporting individual is encouraged to follow the formal SAFENET submission process stated above. SAFENET Field Cards are available at https://safenet.nifc.gov.

**Safety Alert System**

The Safety Alert system is intended as another mechanism to provide safety-related information to the field. The expectation is that the messages will continue to be forwarded within the fire community, and that they will receive a wide distribution in a relatively short period of time. There are three levels of Safety Alert:

- Safety Warning – A warning of a safety hazard that poses an imminent threat to life or property.
- Safety Advisory – An advisory on safety information that isn’t related to imminent or potential threats of injury.
- Safety Bulletin – A factual confirmation of a serious accident, incident or fatality within the fire community.

A database of all bulletins can be found at https://www.nifc.gov/safetyAlerts/index.html.

**Accident/Injury Reporting**

The Occupational Safety and Health Administration (OSHA) mandates that all accidents and injuries be reported in a timely manner. This is important for the following reasons:

- To protect and compensate employees for incidents that occur on-the-job.
- To assist supervisors and safety managers in taking corrective actions and establish safer work procedures.
- To determine if administrative controls or personal protective equipment are needed to prevent a future incident of the same or similar type.
- To provide a means for trend analysis.

**Agency Reporting Requirements**
Employees are required to immediately report to their supervisor every job-related accident. Managers and supervisors shall ensure that an appropriate level of investigation is conducted for each accident and record all personal injuries and property damage. Coordinate with your human resources office or administrative personnel to complete appropriate Office of Worker’s Compensation (OWCP) forms. Reporting is the responsibility of the injured employee’s home unit regardless of where the accident or injury occurred.

- **BLM/NPS/FWS** – Employees will report accidents using the Safety Management Information System (SMIS) at https://www.smis.doi.gov/. Supervisors shall complete SMIS report within six working days after the accident/injury.

- **FS** – Employees will use the eSafety system through the Forest Service Dashboard at http://fsweb.ars.fs.fed.us/HRM/owcp/WorkersComp_index.php/.

- **BIA** – In addition to reporting accidents using the Safety Management Information System (SMIS), Fire Management Officers will complete the Early Alert at https://www.bia.gov/bia/ots/dfwfm/bwfm/safety, and submit to Regional Fire Management Officers within 24 hours after the accident/injury.

**OSHA Reporting Requirements**

For accidents/injuries meeting the Serious Accident criteria (found in Chapter 18), OSHA must be notified within 8 hours.

For other work-related accidents/injuries requiring in-patient hospitalizations, amputations, or loss of an eye, OSHA must be notified within 24 hours. In-patient hospitalization is defined as formal admission to the in-patient service of a hospital or clinic for care or treatment (does not include admission for observation or diagnostic testing only).

Supervisors will coordinate with the unit safety manager where the accident/injury occurred to ensure notifications are made to the appropriate OSHA regional office.

**Critical Incident Management**

The NWCG has published the *Agency Administrator’s Guide to Critical Incident Management* (PMS 926). This guide is designed as a working tool to assist Agency Administrators with the chronological steps in managing a critical incident. This document includes a series of checklists, which outline Agency Administrator’s and other functional area’s oversight and responsibilities. The guide is not intended to replace local emergency plans or other specific guidance that may be available, but should be used in conjunction with existing agency policy, line of duty death (LODD) /loss of human life (LOHL) handbooks,
or other critical incident guidance. Local units should complete the guide or equivalent, and review and update at least annually.

**Critical Incident Stress Management (CISM)**
CISM is a comprehensive, integrated, systematic, and multicomponent crisis intervention program that was developed to manage traumatic experiences. It is a package of tactics that are designed to mitigate the impact of a traumatic event, facilitate normal recovery processes, restore adaptive function, and identify people who would benefit from additional support services. CISM interventions services can be applied to wildland fire, law enforcement, or other emergency responses. CISM interventions should never be used for grief counseling, mediation or a replacement for mental health care professionals. The Agency Administrator is responsible for identifying an event as a critical incident.

**Critical Incident Peer Support (CIPS)**
Critical Incident Peer Support (CIPS) is an intervention tactic designed for colleagues or people of “mutual respect” to help each other through difficult situations. It is the foundation of the interagency wildland fire CISM program since peers understand the unique traumas, fears, job related stresses, and offer instant trust, respect, credibility, and empathy. Camaraderie among peers has credibility that academic training cannot create.

**Critical Incident Peer Support Groups**
CIPS Groups are assembled at the time of request and can be ordered through the dispatch/coordination system. For more information go to [https://gacc.nifc.gov/cism/](https://gacc.nifc.gov/cism/).
Chapter 8
Interagency Coordination and Cooperation

Introduction

Fire management planning, preparedness, prevention, suppression, restoration and rehabilitation, monitoring, research, and education will be conducted on an interagency basis with the involvement of cooperators and partners. The same capabilities used in wildland fire management will also be used, when appropriate and authorized, on non-fire incidents in the United States, and on both wildland fires and non-fire incidents internationally.

National Wildland Fire Cooperative Agreements

USDOI and USDA Interagency Agreement for Fire Management

The objectives of the Interagency Agreement for Fire Management Between the Bureau of Land Management (BLM), Bureau of Indian Affairs (BIA), National Park Service (NPS), Fish and Wildlife Service (FWS) of the United States Department of the Interior (DOI) and the Forest Service (FS) of the United States Department of Agriculture are:

- To provide a basis for cooperation among the agencies on all aspects of wildland fire management and as authorized in non-fire emergencies.
- To facilitate the exchange of personnel, equipment (including aircraft), supplies, services, and funds among the agencies.

DOI, USDA, and DOD Interagency Agreement

The purpose of the Interagency Agreement for the Provision of Temporary Support During Wildland Firefighting Operations among the United States Department of the Interior, the United States Department of Agriculture, and the United States Department of Defense is:

- To establish the general guidelines, terms and conditions under which the National Interagency Fire Center (NIFC) will request, and DOD will provide, temporary support to NIFC in wildfire emergencies occurring within all 50 States, the District of Columbia, and all U.S. Territories and Possessions, including fires on State and private lands. It is also intended to provide the basis for reimbursement of DOD under the Economy Act.

These and other agreements pertinent to interagency wildland fire management can be found in their entirety at https://www.nifc.gov/nicc/logistics/references.htm.

National Wildland Fire Management Structure

Wildland Fire Leadership Council (WFLC)

The WFLC is a cooperative, interagency body dedicated to achieving consistent implementation of the goals, actions, and policies in the National Fire Plan and the Federal Wildland Fire Management Policy. The WFLC provides a forum for
high-level dialogues between federal and non-federal entities to set strategic
direction for national fire management.

The Council consists of the Department of Agriculture's Undersecretary for
Natural Resources and Environment, the Deputy Undersecretary for Natural
Resources and Environment, and the Chief of the U.S. Forest Service; the
Department of the Interior's (DOI) Assistant Secretary for Policy, Management
and Budget, the Directors of the National Park Service, Bureau of Indian
Affairs, Bureau of Land Management, Fish and Wildlife Service, and U.S.
Geological Survey; the Department of Homeland Security's U.S. Fire
Administration Administrator; the President of the Intertribal Timber Council;
two state governors selected from the National Governors Association; a county
commissioner serving as a member of the National Association of Counties; a
mayor serving as a member of the National League of Cities; a State Forester
serving at the request of a senior state elected official; and a fire chief serving at
the request of a senior local government elected official.

The Council is coordinated by the Department of Agriculture's Deputy
Undersecretary for Natural Resources and Environment and DOI’s Assistant
Secretary for Policy, Management and Budget.

### Wildland Fire Executive Council (WFEC)
The WFEC is an advisory council that provides recommendations on national
wildland fire management to the secretaries of Agriculture and Interior through
WFLC. Members include the Director, USDA FS Fire and Aviation
Management; the Director, DOI Office of Wildland Fire; the Deputy
Administrator, DHS U. S. Fire Administration; an NWCG Executive Board
representative; a National League of Cities representative; an Intertribal Timber
Council representative; a Fire Committee representative from the National
Association of State Foresters; a National Association of Counties
representative; an International Association of Fire Chiefs representative, and a
National Governors Association representative.

Federal Fire Policy Council (FFPC)
The FFPC provides a common national federal agency approach to wildland fire
management. FFPC ensures that wildland fire management policies, programs,
activities, and budgets are coordinated and consistent among and between the
member agencies and strives for coordinated and consistent policies and
programs with non-federal partner and cooperator agencies. FFPC sets strategic
policy and program direction, provides coordinated recommendations to the
Secretaries of Agriculture, the Interior, and Homeland Security and resolves
inconsistencies among and between federal wildland fire programs.

The FFPC is accountable and has the authority to:
- Set the vision and provide leadership for the federal wildland fire program.
- Set national federal strategic wildland fire program goals and priorities.
- Establish the Fire Executive Council.
The FFPC is responsible to:

- Provide coordinated federal wildland fire management policy direction.
- Resolve policy and program management inconsistencies.
- Set strategic budget priorities for wildland fire management.
- Coordinate and communicate with non-federal entities.

The FFPC is composed of the USDA Deputy Under Secretary for National Resources and Environment; the Chief of the Forest Service and the Deputy Chief of State and Private Forestry; and for DOI the Assistant Secretaries for Policy, Management and Budget, Fish and Wildlife and Parks, Indian Affairs, Land and Minerals Management, and Water and Science; the Bureau Directors of the Bureau of Land Management, the Fish and Wildlife Service, the National Park Service, the Bureau of Indian Affairs, and the US Geological Survey; the Deputy Assistant Secretary – Law Enforcement, Security and Emergency Management; the Assistant Administrator of DHS-US Fire Administration; and the Environmental Protection Agency representative.

**Fire Executive Council (FEC)**

The FEC provides a common, integrated, and coordinated federal agency approach to wildland fire policy, leadership, budget, and program oversight. Within the broad strategic direction and vision set by the FFPC, the FEC ensures that the wildland fire management policies, programs, activities, and budgets are coordinated and consistent among and between the member agencies. FEC sets policy and program direction for federal wildland fire program implementation, provides coordinated recommendations to the FFPC, and resolves inconsistencies among and between federal wildland fire programs. FEC ensures policy and program coordination and integration with non-fire management programs and activities as well as non-federal partners and cooperators.

The FEC is accountable and has the authority to:

- Establish strategic federal fire program budget direction and priorities.
- Ensure coordinated federal policy development.
- Develop federal business requirements and priorities.

The FEC is responsible and has the authority to:

- Provide coordinated federal interagency executive level wildland fire policy leadership, direction, and program oversight.
- Provide coordinated recommendations and advice to the FFPC.
- Provide wildland fire policy and program direction to the Fire Management Board (FMB).
- Provide strategic policy and program integration with resource management, aviation, and other related program areas.
- Coordinate and communicate with other non-federal entities.
- Set strategic budget direction and recommendations.
• Establish strategic direction and requirements for wildland fire information and technology, wildland fire administrative/business support, scientific and research support, and other program areas.
• Approve wildland fire policy, as appropriate.
• Resolve policy and program management inconsistencies and differences.
• Oversee compliance with policy, budget, and program direction.
• Charter the Fire Management Board.
• Charter the National Wildfire Coordinating Group (NWCG) along with the Intertribal Timber Council and the National Association of State Foresters.

The FEC is composed of the Director and Deputy Directors, USFS Fire and Aviation Management (USDA); the Director, Office of Wildland Fire, Director, Office of Aviation Services, Fire Executives from BLM, NPS, BIA, and USFWS (DOI); and the US Fire Administration Chief, Emergency Support Branch, National Fire Programs (USDHS-FEMA).

Fire Management Board (FMB)
The FMB provides a mechanism for coordinated and integrated federal wildland fire program management and implementation. The FMB, taking strategic policy and program direction from the FEC, directs, coordinates and oversees the development and implementation of federal wildland fire policy and programs to provide consistent and cost-effective program management.

The FMB is accountable and has the authority to:
• Coordinate federal program management and oversight.

The FMB is responsible for and has the authority to:
• Provide common, integrated implementation strategies, approaches, programs, and oversight for implementing federal wildland fire policies.
• Provide federal wildland fire program strategy, policy, budget and program recommendations to the FEC.
• Provide recommendations on information and technology requirements, priorities, and investments to the Wildland Fire Information and Technology Executive Board.
• Provide recommendations on science and research requirements and priorities necessary to support wildland fire program management activities.
• Identify requirements and recommend priorities for standards necessary to ensure interoperability of intergovernmental wildland fire activities and operations.
• Consult with our non-federal partners.
• Develop recommendations for interagency wildland fire administrative/business support needs.

The FMB is composed of the USFS Fire and Aviation Management Assistant Directors (USDA); the Deputy Director, Office of Wildland Fire, the Deputy Director, Office of Aviation Services, the Fire Directors for BIA, BLM,
INTERAGENCY COORDINATION AND COOPERATION  
CHAPTER 8

USFWS, and NPS (DOI); and the Wildfire Program Manager, US Fire Administration (USDHS-FEMA).

National Wildfire Coordinating Group (NWCG)
The NWCG is made up of the USFS, BIA, BLM, FWS, and NPS; Intertribal Timber Council; U.S. Fire Administration (USFA); state forestry agencies through the National Association of State Foresters (NASF); and the International Association of Fire Chiefs. The mission of the NWCG is to provide leadership in establishing, maintaining, and communicating consistent interagency standards, guidelines, and qualifications for wildland fire management. Its goal is to provide more effective execution of each agency’s fire management program. The group provides a formalized system to agree upon standards of training, equipment, qualifications, and other operational functions.

Interior Fire Executive Council (IFEC)
The Interior Fire Executive Council (IFEC) provides interagency coordination and interagency executive-level wildland fire policy leadership, direction, and program oversight. IFEC is the focal point for discussing wildland fire policy issues that affect the DOI and provides a forum for gathering the interests of the DOI bureaus to formulate a DOI recommendation and/or position. ### to be taken forward to the Wildland Fire Executive Council (WTEC).

The IFEC is composed of the Director, Office of Wildland Fire (OWF) and the four DOI fire directors and their respective senior executives, as well as the Director, Aviation Management Directorate and a representative from USGS.

Office of Wildland Fire (OWF)
The OWF is a Department of the Interior organization responsible for managing and overseeing all wildland fire management activities executed by the bureaus. OWF coordinates the Department’s wildland fire programs within the Department and with other federal and non-federal partners, to establish legally and scientifically based Department-wide policies and budgets, and to provide strategic leadership and oversight, that result in safe, comprehensive, cohesive, efficient, and effective wildland fire programs for the nation consistent with the bureaus’ statutory authorities and constraints.

For more information about the Office of Wildland Fire and the federal wildland fire management organization, follow the links under “About OWF” at https://www.doi.gov/wildlandfire.

Multi-Agency Management and Coordination

National Multi-Agency Coordinating (NMAC) Group
National multi-agency coordination is overseen by the NMAC Group, which consists of one representative each from the following agencies: BLM, FWS, NPS, BIA, FS, NASF, and the USFA, who have been delegated authority by
their respective agency directors to manage wildland fire operations on a national scale when fire management resource shortages are probable. The delegated authorities include:

- Provide oversight of general business practices between the NMAC group and the Geographic Area Multi-Agency Coordination groups.
- Establish priorities among geographic areas.
- Activate and maintain a ready reserve of national resources for assignment directly by NMAC as needed.
- Implement decisions of the NMAC.

The NMAC Operating Plan, NMAC Correspondence, and other resources and references are at https://www.nifc.gov/nicc/administrative/nmac/index.html.

Geographic Area Multi-Agency Coordinating (GMAC) Groups

Geographic area multi-agency coordination is overseen by GMAC Groups, which are comprised of geographic area (State, Region) lead administrators or fire managers from agencies that have jurisdictional or support responsibilities, or that may be significantly impacted by resource commitments. GMAC responsibilities include:

- Establish priorities for the geographic area.
- Acquire, allocate, and reallocate resources.
- Provide NMAC with National Ready Reserve (NRR) resources as required.
- Issue coordinated and collective situation status reports.

NWCG Standards for Interagency Incident Business Management

All federal agencies have adopted the NWCG Standards for Interagency Incident Business Management as the official guide to provide execution of each agency’s incident business management program. Unit offices, geographic areas, or NWCG may issue supplements, as long as policy or conceptual data is not changed.

Since consistent application of interagency policies and guidelines is essential, procedures in the NWCG Standards for Interagency Incident Business Management will be followed. Agency manuals provide a bridge between manual sections and the NWCG Standards for Interagency Incident Business Management so that continuity of agency manual systems is maintained and all additions, changes, and supplements are filed in a uniform manner.

- **DOI** – The Department of the Interior All Hazards-Supplement to the NWCG Standards for Interagency Incident Business Management establishes business management guidelines for the Department of the Interior’s (DOI’s) all-hazards incidents. The DOI Supplement is available at https://www.doi.gov/emergency/emergency-policy.cfm.
- **BLM** – The NWCG Standards for Interagency Incident Business Management replaces BLM Manual Section 1111.
- **NPS** – Refer to RM-18.
Standards for Cooperative Agreements

Agreement Policy
Agreements will be comprised of two components: the actual agreement and an operations plan. The agreement will outline the authority and general responsibilities of each party and the operations plan will define the specific operating procedures.

Any agreement which obligates federal funds or commits anything of value must be signed by the appropriate warranted contracting officer. Specifications for funding responsibilities should include billing procedures and schedules for payment.

Any agreement that extends beyond a fiscal year must be made subject to the availability of funds. Any transfer of federal property must be in accordance with federal property management regulations.

All agreements must undergo periodic joint review; and, as appropriate, revision. Assistance in preparing agreements can be obtained from local or state office fire and/or procurement staff.

All appropriate agreements and operating plans will be provided to the servicing dispatch center. The authority to enter into interagency agreements is extensive.

National Interagency Agreements
The national agreement, which serves as an umbrella for interagency assistance among federal agencies is the interagency agreement between the Bureau of Land Management, Bureau of Indian Affairs, National Park Service, Fish and Wildlife Service of the United States Department of the Interior, and the Forest Service of the United States Department of Agriculture. This and other national agreements give substantial latitude while providing a framework for the development of state and local agreements and operating plans.
Regional/State Interagency Agreements
Regional and state cooperative agreements shall be developed for mutual assistance. These agreements are essential to the fire management program. Concerns for area-wide scope should be addressed through these agreements.

Local Interagency Agreements
Local units are responsible for developing agreements with local agencies and fire departments to meet mutual needs for suppression and/or prescribed fire services.

Emergency Assistance
Approved, established reimbursable agreements are the appropriate and recommended way to provide emergency assistance. If no agreements are established, refer to your Agency Administrator to determine the authorities delegated to your agency to provide emergency assistance.

Contracts
Contracts may be used where they are the most cost-effective means of providing for protection commensurate with established standards. A contract, however, does not absolve an Agency Administrator of the responsibility for managing a fire program.

Contracts should be developed and administered in accordance with Federal Acquisition Regulations. In particular, a contract should specify conditions for abandonment of a fire in order to respond to a new call elsewhere.

Elements of an Agreement
The following elements should be addressed in each agreement:

- The authorities appropriate for each party to enter in an agreement.
- The roles and responsibilities of each agency signing the agreement.
- An element addressing the cooperative roles of each participant in prevention, pre-suppression, suppression, fuels, and prescribed fire management operations.
- Reimbursements/Compensation – All mutually approved operations that require reimbursement and/or compensation will be identified and agreed to by all participating parties through a cost-share agreement. The mechanism and timing of the funding exchanges will be identified and agreed upon.
- Appropriation Limitations – Parties to this agreement are not obligated to make expenditures of funds or reimbursements of expenditures under terms of this agreement unless the Congress of the United States of America appropriates such funds for that purpose by the Counties of _____, by the Cities of _____, and/or the Governing Board of Fire Commissioners of _____.
- Liabilities/Waivers – Each party waives all claims against every other party for compensation for any loss, damage, personal injury, or death occurring
as a consequence of the performance of this agreement unless gross
negligence on any part of any party is determined.

- Termination Procedure – The agreement shall identify the duration of the
  agreement and cancellation procedures.
- A signature page identifying the names of the responsible officials shall be
  included in the agreement.
  - BLM – Refer to Chapter 2, Agreements with Cooperators (Rangeland
    Fire Protection Association (RFPA) and Local Fire Department).
  - NPS – Refer to DO-20 for detailed instructions and format for
devolving agreements.
  - BIA – Refer to Notification of Required Use of Cooperative Agreement
    Template in response to Office of Inspector General’s Independent
    Report on the “Bureau of Indian Affairs Wildland Fire Suppression”
    (memo dated September 06, 2013) and Clarification of Authorities on
    Implementation of the Wildland Fire Cooperative Agreement Template
    (memo dated May 28, 2014).

### Annual Operating Plans (### AOPs)

### Annual Operating plans shall be reviewed, updated, and approved prior to
the fire season. The plan may be amended after a major incident as part of a
joint debriefing and review. The plan shall contain detailed, specific procedures
which will provide for safe, efficient, and effective operations.

General Elements of an ### Annual Operating Plan

The following items should be addressed in the ### AOP:

- **Mutual Aid**
  The ### AOP should address that there may be times when cooperators are
  involved in emergency operations and unable to provide mutual aid. In this
  case, other cooperators may be contacted for assistance.

- **Command Structure**
  The Incident Command System (ICS) will be used to manage all fires under
  federal jurisdiction. Unified command should be used, as appropriate,
  whenever multiple jurisdictions are involved, unless one or more parties
  request a single agency IC. If there is a question about jurisdiction, fire
  managers should mutually decide and agree on the command structure as
  soon as they arrive on the fire; Agency Administrators should confirm this
decision as soon as possible. Once this decision has been made, the incident
  organization in use should be relayed to all units on the incident as well as
  dispatch centers. In all cases, the identity of the IC must be made known to
  all fireline and support personnel.

- **Communications**
  In mutual aid situations, a common designated radio frequency identified in
  the ### AOP should be used for incident communications. All incident
  resources should utilize and monitor this frequency for incident
  information, tactical use, and changes in weather conditions or other
emergency situations. In some cases, because of equipment availability/capabilities, departments/agencies may have to use their own frequencies for tactical operations, allowing the “common” frequency to be the link between departments. It is important that all department/agencies change to a single frequency or establish a common communications link as soon as practical. Clear text should be used. Avoid personal identifiers, such as names. This paragraph in the ### AOP shall meet Federal Communications Commission (FCC) requirements for documenting shared use of radio frequencies.

- **Distance/Boundaries**
  Responding and requesting parties should identify any mileage limitations from mutual boundaries where “mutual aid” is either pay or non-pay status. Also, for some fire departments, the mileage issue may not be one of initial attack “mutual aid,” but of mutual assistance. In this situation, you may have the option to make it part of this agreement or identify it as a situation where the request would be made to the agency having jurisdiction, which would then dispatch the fire department.
  - BLM – Agreements/### AOPs with Department of Defense, best practices (including UXO protocols) are located on the BLM Fire Operations website http://web.blm.gov/internal/fire/fire_ops/toolbox.htm.

- **Time/Duration**
  Responding and requesting parties should identify time limitations (usually 24 hours) for resources in a non-reimbursable status, and “reimbursable rates” when the resources are in a reimbursable status.

- **Qualifications/Minimum Requirements**
  The National Wildfire Coordinating Group publication, National Incident Management System: Wildland Fire Qualification System Guide NWCG Standards for Wildland Fire Position Qualifications (PMS 310-1), outlines the minimum requirements for training, experience, physical fitness level, and currency standards for wildland fire positions, which all participating agencies have agreed to meet for national mobilization.
  - During initial action, all agencies (federal, state, local and Tribal) accept each other’s standards. Once jurisdiction is clearly established, then the standards of the agency(s) with jurisdiction prevail.
  - BLM/BIA – BLM/BIA may accept the standards of any local cooperator through the duration of an incident when the cooperator has a current cooperative fire response agreement with BLM/BIA, and the cooperator is in compliance with the agreement. Personnel from agencies that do not subscribe to the NWCG qualification standards may be used on agency managed fires, and must only be assigned to duties commensurate with their competencies, qualifications, and equipment capabilities.
  - Prior to the fire season, federal agencies should meet with their state, local, and Tribal agency partners and communicate the qualification/certification standards that will apply to the use of local, non-federal
firefighters during initial action on fires on lands under the jurisdiction of a federal agency.

○ The Geographic Area Coordinating Group should determine the application of PMS 310-1 qualification/certification standards for mobilization within the geographic area.

○ On a fire where a non-federal agency is also an agency with legal jurisdiction, the standards of that agency apply.

○ The AOP should address qualification and certification standards applicable to the involved parties.

• Reimbursement/Compensation

Compensation shall be as close to actual expenditures as possible. This should be clearly identified in the AOP. Compensation will be based on actual expenditures unless exceptions are identified within the operating plan. If suppression tactics cross jurisdictional boundaries, refer to the cost share agreement for compensation methods. Vehicles and equipment operated under the federal excess property system will only be reimbursed for maintenance and operating costs.

• Cooperation

The annual operating plan will be used to identify how the cooperators will share expertise, training, and information on items such as prevention, investigation, communication plans, safety, training, ICS, and the integration of resources.

• Agency Reviews and Investigations

Operating plans should describe processes for conducting agency specific reviews and investigations. AOPs should also describe processes for accident notifications to the appropriate fire managers, line officers, and dispatch/coordination centers.

• Dispatch Centers

Dispatch centers will ensure all resources know the name of the assigned IC and announce all changes in incident command. Geographic Area Mobilization Guides, Zone Mobilization Guides, and Local Mobilization Guides should include this procedure as they are revised for each fire season.

Fiscal Responsibility Elements of an AOP

Operating plans should address the following:

• The level of communication required with neighboring jurisdictions regarding the management of all wildland fires, especially those with multiple objectives.

• The level of communication required with neighboring jurisdictions regarding suppression resource availability and allocation, especially for wildland fires with objectives that include benefit.

• Identify how to involve all parties in developing the strategy and tactics to be used in preventing wildland fire from crossing the jurisdictional boundary.
boundary, and how all parties will be involved in developing mitigations which would be used if a wildland fire does cross jurisdictional boundaries.

- Jurisdictions, which may include state and private lands, should identify the conditions under which wildland fire may be managed to achieve benefit, and the information or criteria that will be used to make that determination (e.g., critical habitat, hazardous fuels, and land management planning documents).

- Jurisdictions will identify conditions under which cost efficiency may dictate where suppression strategies and tactical actions are taken (i.e., it may be more cost effective to put the containment line along an open grassland than along a mid-slope in timber). Points to consider include loss and benefit to land, resource, social and political values, and existing legal statutes.

- The cost-sharing methodologies that will be utilized should wildfire spread to a neighboring jurisdiction in a location where fire is not wanted.

- The cost-share methodologies that will be used should a jurisdiction accept or receive a wildland fire and manage it to create benefit.

- Any distinctions in what cost-share methodology will be used if the reason the fire spreads to another jurisdiction is attributed to a strategic decision, versus environmental conditions (weather, fuels, and fire behavior), or tactical considerations (firefighter safety, resource availability) that preclude stopping the fire at jurisdictional boundaries. Examples of cost-sharing methodologies may include, but are not limited to, the following:
  - When a wildland fire that is being managed for benefit spreads to a neighboring jurisdiction because of strategic decisions, and in a location where fire is not wanted, the managing jurisdiction shall be responsible for wildfire suppression costs.
  - In those situations where weather, fuels, or fire behavior of the wildland fire precludes stopping at jurisdiction boundaries cost-share methodologies may include, but are not limited to:
    - a) Each jurisdiction pays for its own resources – fire suppression efforts are primarily on jurisdictional responsibility lands.
    - b) Each jurisdiction pays for its own resources – services rendered approximate the percentage of jurisdictional responsibility, but not necessarily performed on those lands.
    - c) Cost share by percentage of ownership.
    - d) Cost is apportioned by geographic division. Examples of geographic divisions are: Divisions A and B (using a map as an attachment); privately owned property with structures; or specific locations such as campgrounds.
    - e) Reconciliation of daily estimates (for larger, multi-day incidents). This method relies upon daily agreed to cost estimates, using Incident Action Plans or other means to determine multi-Agency contributions. Reimbursements can be made upon estimates instead of actual bill receipts.
All-Hazards Coordination and Cooperation

All-hazards is defined by NWCG as an incident, natural or manmade, that warrants action to protect life, property, environment, and public health or safety, and to minimize disruptions of government, social, or economic activities. Wildland fire is one type of all-hazard incident. All-hazards incidents are managed using a standardized national incident management system and response framework.

Stafford Act Disaster Relief and Emergency Assistance

The Robert T. Stafford Disaster Relief and Emergency Assistance Act (Public Law 93-288, as amended) establishes the programs and processes for the Federal Government to provide disaster and emergency assistance to states, local governments, Tribal nations, individuals, and qualified private non-profit organizations. The provisions of the Stafford Act cover all hazards including natural disasters and terrorist events. In response to, or in anticipation of, a major disaster or emergency as defined by the act, the President “may direct any federal agency, with or without reimbursement, to utilize its authorities and the resources granted to it under federal law (including personnel, equipment, supplies, facilities, managerial, technical, and advisory services) in support of state and local assistance efforts.”

- **BIA** – Refer to Chapter 6 for the Stafford Act Amendment Tribal Disaster Assistance.

Homeland Security Act

The *Homeland Security Act of 2002* (Public Law 107-296) established the Department of Homeland Security (DHS) with the mandate and legal authority to protect the American people from the continuing threat of terrorism. In the act, Congress also assigned DHS as the primary focal point regarding natural and manmade crises and emergency planning.

*Homeland Security Presidential Directive (HSPD-5), Management of Domestic Incidents, February 28, 2003,* is intended to enhance the ability of the United States to manage domestic incidents by establishing a single, comprehensive national incident management system. HSPD-5 designates the Secretary of Homeland Security as the Principal Federal Official (PFO) for domestic incident management and empowers the Secretary to coordinate federal resources used in response to or recovery from terrorist attacks, major disasters, or other emergencies in specific cases.

National Response Framework
Federal disaster relief and emergency assistance are coordinated by the federal Emergency Management Agency (FEMA) using the National Response Framework (NRF). The NRF, using the National Incident Management System (NIMS), establishes a single, comprehensive framework for the management of domestic incidents. The NRF provides the structure and mechanisms for the coordination of federal support to state, local, and Tribal incident managers; and for exercising direct federal authorities and responsibilities. Information about the National Response Framework can be found at https://www.fema.gov/media-library/assets/documents/117791.

**National Incident Management System (NIMS)**

HSPD-5 directed that the DHS Secretary develop and administer a National Incident Management System to provide a consistent, nationwide approach for federal, state, and local governments to work effectively and efficiently together to prepare for, respond to, and recover from domestic incidents, regardless of cause, size, or complexity. To provide for interoperability and compatibility among federal, state, and local capabilities, the NIMS will include a core set of concepts, principles, terminology, and technologies covering the incident command system; multi-agency coordination systems; unified command; training; identification and management of resources (including systems for classifying types of resources); qualifications and certification; and the collection, tracking, and reporting of incident information and incident resources. Information about the NIMS can be found at https://www.fema.gov/national-incident-management-system.

**Emergency Support Function (ESF) Annexes**

Emergency Support Function (ESF) Annexes are the components of the NRF that detail the mission, policies, structures, and responsibilities of federal agencies. They are utilized for coordinating resource and programmatic support to the states, Tribes, and other federal agencies or other jurisdictions and entities during Incidents of National Significance. Each ESF Annex identifies the ESF coordinator and the primary and support agencies pertinent to the ESF. USDA-FS and USFA are the Co-coordinators of ESF #4 – Firefighting. USDA-FS coordinates at the national and regional levels with FEMA, state agencies, and cooperating agencies on all issues related to response activities. USFA coordinates with appropriate state agencies and local fire departments to expand structural firefighting resource capacity in the existing national firefighting mobilization system and provides information on protection of emergency services sector critical infrastructure.

The ESF primary agency serves as a federal executive agent under the Federal Coordinating Officer to accomplish the ESF mission. The ESF support agencies, when requested by the designated ESF primary agency, are responsible for conducting operations using their own authorities, subject-matter experts, capabilities, or resources. USDA-FS is the primary agency for ESF #4 – Firefighting.

Other NRF USDA-FS and DOI responsibilities are:

**National Oil and Hazardous Substances Pollution Contingency Plan (NCP, 40 CFR 300)**

The NCP provides the organizational structure and procedures for preparing for and responding to discharges of oil and releases of hazardous substances, pollutants, and contaminants. The NCP is required by section 105 of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA), 42 U.S.C. 9605, as amended by the Superfund Amendments and Reauthorization Act of 1986 (SARA), P.L. 99–499, and by section 311(d) of the Clean Water Act (CWA), 33 U.S.C. 1321(d), as amended by the Oil Pollution Act of 1990 (OPA), P.L. 101–380. The NCP identifies the national response organization that may be activated in response actions to discharges of oil and releases of hazardous substances, pollutants, and contaminants in accordance with the authorities of CERCLA and the CWA. It specifies responsibilities among the federal, state, and local governments and describes resources that are available for response, and provides procedures for involving state governments in the initiation, development, selection, and implementation of response actions, pursuant to CERCLA. The NCP works in conjunction with the National Response Framework through Emergency Support Function 10 – Oil and Hazardous Material Response.

**Post-Katrina Emergency Management Reform Act**

Release Date: January 2020
The Post-Katrina Emergency Reform Act of 2006 (Public Law 109-295) amended the Homeland Security Act. This law established the FEMA Administrator as responsible for managing the federal response to emergencies and disasters, and for reporting directly to the President. The Secretary of Homeland Security is the Principal Federal Official, but has no direct authority for response or coordination. This law also amends the Stafford Act to allow FEMA, in the absence of a specific request or Presidential declaration, to direct other federal agencies to provide resources and support where necessary to save lives, prevent human suffering, or mitigate severe damage.

Presidential Policy Directive-8

Presidential Policy Directive-8 (PPD-8), National Preparedness, March 30, 2011 is intended to strengthen all-of-Nation preparedness. PPD-8 directs the Secretary of Homeland Security to develop a national preparedness goal and a national preparedness system in coordination and consultation with other federal departments and agencies, state, local, tribal, and territorial governments, private and non-profit sectors, and the public. The national preparedness system is comprised of:

- National planning frameworks for the prevention, protection, mitigation, response to, and recovery from national threats. These frameworks are similar and complementary to the National Response Framework (NRF).
- Corresponding federal interagency operational plans.
- Guidance for the national interoperability of personnel and equipment.
- Guidance for business, community, family, and individual preparedness.

All-Hazards Coordination and Cooperation

In an actual or potential incident of national significance that is not encompassed by the Stafford Act, the President may instruct a federal department or agency, subject to any statutory limitations on the department or agency, to utilize the authorities and resources granted to it by Congress. In accordance with Homeland Security Presidential Directive-5, federal departments and agencies are expected to provide their full and prompt support, cooperation, available resources, consistent with their own responsibilities for protecting national security. Personnel assigned to all-hazard incidents may only perform duties within agency policy, training, and capability.

NWCG Role in Support, Coordination, and All-Hazards Response by Wildland Fire Agencies

The National Wildfire Coordinating Group has established guidelines to define NWCG’s role in the preparedness for, coordination of, and support to all-hazards incidents.

General All-Hazards Guidelines for NWCG:
- The National Incident Management System (NIMS) is the foundation of all response. NWCG principles, procedures, and publications will comply with
and support the NIMS. NWCG expects that all local, State, and federal response agencies and organizations will comply with NIMS.

- NWCG uses the NIMS definition of All-Hazards, which includes wildland fire. This definition is:
  - All-Hazards: Describing an incident, natural or manmade, that warrants action to protect life, property, environment, and public health or safety, and to minimize disruptions of government, social, or economic activities.

- NWCG recognizes FEMA’s role in overseeing the development, implementation, and maintenance of NIMS, which includes the Incident Command System (ICS) and its components (forms, core competencies, training, qualifications and standards, etc.).

- NWCG accepts the components of NIMS and will develop an endorsement process and additional qualifications requirements for positions having specific wildland fire application.

- NWCG recognizes and supports the use of position-specific qualifications from other NIMS compliant disciplines (law enforcement, structure fire, hazmat, etc.).

- NWCG supports the ongoing development and maintenance of wildland fire systems to be adaptable for all-hazards response.

- NWCG expects that all wildland fire personnel engaged in all-hazards response, whether at the national, regional or local level will base actions on both NWCG and agency policies, standards, doctrine, and procedures.

- NWCG member agencies ensure all personnel responding to all-hazards incidents are properly trained, equipped, and qualified for their assigned position.

- NWCG encourages all wildland fire agencies and personnel to receive appropriate preparedness training, focusing on general knowledge of all-hazards response, disaster characteristics, and the effects from these events on citizens and responders.

- NWCG encourages all wildland fire agencies and personnel to consider appropriate risk mitigation measures (e.g., vaccinations, personal protective equipment, etc.) prior to responding to all-hazards incidents.

- NWCG coordinates with member agencies to ensure accountability of wildland fire personnel during all-hazards response.

**USFS All-Hazards Guiding Principles and Doctrine**

The Forest Service has developed doctrine, known as the *Foundational Doctrine for All-Hazard Response*, outlining the guiding principles, roles, and responsibilities of the agency during all-hazards response. Forest Service responders and leadership are expected to follow this doctrine, established to help ensure the safest response conditions possible.

The following principles encompass the guidelines, roles, and responsibilities established in this doctrine:

**Release Date: January 2020**
The intent of Forest Service all-hazard response and support is to protect human life, property, and at-risk lands and resources while imminent threats exist.

Personnel should be prepared and organized to support all-hazard responses by providing trained personnel to utilize their inherent skills, capabilities, and assets, without requiring significant advanced training and preparation. Support to cooperators requiring wildland resources will be consistent with employee core skills, capabilities, and training.

As incidents move from the response phase to the recovery phase, there should be a shift to demobilizing agency resources.

Within all-hazard response environments, agency personnel may encounter situations in which there is an imminent threat to life and property outside of their Agency’s jurisdiction. These environments include scenarios ranging from being first on scene at a vehicle accident, to committing Agency resources to protect a local community. Leaders are therefore expected to use their judgment and respond appropriately.

Wildland resources deployed to all-hazard responses will understand the dynamic and complex environment and utilize their leadership, training, and skills to adapt, innovate, and bring order to chaos.

Leaders are expected to operate within the incident organizational structure encountered on all-hazard responses. When such structure is absent, they will utilize National Incident Management System principles to assure safe and effective utilization of agency resources.

Leaders are expected to operate under existing policies and doctrine under normal conditions. On all-hazard responses, fire and aviation business and safety standards may have to be adapted to the situation to successfully accomplish the mission. When conflicts occur, employees will use their judgment, weigh the risk versus gain, and operate within the intent of Agency policy and doctrine.

All-hazard response will be focused on missions that we perform consistently and successfully. Workforce assignments will be directed toward the core skills developed through our existing training and curriculum.

Agency employees will be trained to operate safely and successfully in the all-hazard environment. Preparedness training will focus on gaining general knowledge of all-hazard response, disaster characteristics, as well as the effects from these events on citizens and responders.

Specific operational skills will be facilitated through the National Incident Management System, working with the responsible agencies who supply the technical specialists who, in turn, provide the specific skill sets. The Forest Service will not train or equip to meet every hazard.

Wildland employees are expected to perform all-hazard support as directed within their qualifications and physical capabilities. All employees have the right to a safe assignment. The employee may suspend his or her work whenever any environmental condition—or combination of condition—
become so extreme than an immediate danger is posed to employee health and safety that cannot be readily mitigated by the use of appropriate, approved protective equipment or technology.

- Acceptable risk is risk mitigated to a level that provides for reasonable assurances that the all-hazard task can be accomplished without serious injury to life or damage to property.
- All-hazard incident-specific briefing and training will be accomplished prior to task implementation. This preparation will usually occur prior to mobilization where incident description, mission requirements, and known hazards are addressed. Key protective equipment and associated needs for these all-hazard tasks that wildland employees do not routinely encounter or perform will be identified. This will be done—and be in place—prior to task implementation.
- Agency employees will be provided with appropriate vaccinations, credentials, and personal protective equipment to operate in the all-hazard environment to which they are assigned.
- Additional information can be found in the Forest Service Foundational Doctrine for All-Hazard Response. ###

https://www.fs.fed.us/fire/doctrine/conferences/all_hazard_response.pdf
https://www.fs.fed.us/managing-land/fire/ibp/all-hazard

**All-Hazard Incident Management Teams (IMTs) and Other Non-Wildland Fire IMTs**

Different entities have developed IMTs based on ICS core competencies under the National Incident Management System (NIMS). Federal agencies with IMTs include the U.S. Coast Guard, the Environmental Protection Agency, USDA’s Animal and Plant Health Inspection Service (APHIS), DOI’s National Park Service and U.S. Fish and Wildlife Service, and others. In addition, many states and metropolitan areas have developed All Hazard Incident Management Teams (AHIMTs). AHIMT consists of personnel from various disciplines (fire, rescue, emergency medical, hazardous materials, law enforcement, public works, public health and others) trained to perform the functions of the Command and General Staff at the Type 3 level. AHIMTs are often sponsored or administered by a state or local emergency management agency.

Many different entities that sponsor an AHIMT or other non-wildland fire IMT have requested that their personnel be allowed to “shadow” wildland fire IMT positions during incidents (sometimes referred to as “field training” or “field mentoring”). The primary purpose of shadowing is to gain insight to complex incident management. All shadowing events should be coordinated with the receiving GACCs and the IC at an incident.

- **DOI** – https://www.doi.gov/emergency/emergency-policy.cfm

**International Wildland Fire Coordination and Cooperation**

**U.S. – Mexico Cross Border Cooperation on Wildland Fires**
In April 2015, the Department of Interior and the Department of Agriculture signed a Wildfire Protection Agreement with Mexico. The agreement has two purposes:

- To enable wildfire protection resources originating in the territory of one country to cross the United States-Mexico border in order to suppress wildfires on the other side of the border within the zone of mutual assistance (10 miles/16 kilometers) in appropriate circumstances.
- To give authority for Mexican and U.S. fire management organizations to cooperate on other fire management activities outside the zone of mutual assistance.

National Operational Guidelines for this agreement are located at https://www.nifc.gov/nicc/logistics/references.htm. These guidelines cover issues at the national level and also provide a template for those issues that need to be addressed in local operating plans. The local operating plans identify how the agreement will be implemented by the GACCs (and Zone Coordination Centers) that have dispatching responsibility on the border. The local operating plans will provide the standard operational procedures for wildfire suppression resources that could potentially cross the U.S. border into Mexico.

**U.S. – Canada, Reciprocal Forest Firefighting Arrangement**

Information about United States – Canada cross border support is located at https://www.nifc.gov/nicc/logistics/references.htm. This chapter provides policy guidance, which was determined by an exchange of diplomatic notes between the U.S. and Canada in 1982. This chapter also provides operational guidelines for the Canada – U.S. Reciprocal Forest Fire Fighting Arrangement. These guidelines are updated yearly.

**U.S. – Australia/New Zealand Wildland Fire Arrangement**

Information about United States – Australia/New Zealand support is located at https://www.nifc.gov/nicc/logistics/references.htm. This chapter provides a copy of the arrangements signed between the U.S. and the states of Australia and the country of New Zealand for support to one another during severe fire seasons. It also contains the AOP that provides more detail on the procedures, responsibilities, and requirements used during activation.

**International Non-Wildland Fire Coordination and Cooperation**

**International Disasters Support**

Federal wildland fire employees may be requested through the FS to support the U.S. Government’s (USG) response to international disasters by serving on Disaster Assistance Response Teams (DARTs). A DART is the operational equivalent of an ICS team used by the U.S. Agency for International Development’s Office of Foreign Disaster Assistance (OFDA) to provide an on-the-ground operational capability at the site of an international disaster. Prior to
being requested for a DART assignment, employees will have completed a
weeklong DART training course covering information about:
• USG agencies charged with the responsibility to coordinate USG responses
to international disaster.
• The purpose, organizational structure, and operational procedures of a
  DART.
• How the DART relates to other international organizations and countries
during an assignment. Requests for these assignments are coordinated
  through the FS International Programs, Disaster Assistance Support
  Program (DASP).
• DART assignments should not be confused with technical exchange
  activities, which do not require DART training.

More information about DARTs can be obtained at the FS International
Chapter 9

Fire Management Planning

Purpose

The purpose of fire management planning is to provide for firefighter and public safety, and outline fire management strategies and tactics that, when implemented, protect values and meet resource goals and objectives of the land and/or resource management plan. Planning strategically allows for responses to fire commensurate with risk, and movement towards desired conditions.

Fire planning products include a concise summary of information organized by fire management unit (FMU) or by other geospatially explicit representations of the landscape. These products should be updated as new information becomes available, as conditions on the ground necessitate updates, or when changes are made to the Land/Resource Management Plan (L/RMP).

Products may address: response to wildfire, hazardous fuels and vegetation management, burned area emergency stabilization and rehabilitation, prevention, community interactions and collaborative partnerships roles, and monitoring and evaluation of programs.

Fire Management planning efforts should address the vision and goals of the National Cohesive Wildland Fire Management Strategy (2014) (Cohesive Strategy).

The Cohesive Strategy vision is “To safely and effectively extinguish fire, when needed; use fire where allowable; manage our natural resources; and as a Nation, live with wildland fire.”

The Cohesive Strategy goals are:

• Restore and maintain landscapes
• Fire-adapted communities
• Wildfire response

Policy

“Fire, as a critical natural process, will be integrated into land and resource management plans and activities on a landscape scale and across agency boundaries” (Review and Update of the Federal Wildland Fire Management Policy, January 2001).

Fire Management Plans should be developed collaboratively between federal agencies and tribal, local, and state agencies to accomplish resource and protection objectives.

Every area with burnable vegetation must have an approved Fire Management Plan (FMP). Fire Management Plans are strategic plans that define a program to manage wildland fires based on the area’s approved land management plan.
When practical, Fire Management Plans (FMP) should contain mutually
developed objectives for managing fires that cross jurisdictional boundaries.
Fire Management Plans must provide for firefighter and public safety; include
fire management strategies, tactics, and alternatives; address values to be
protected and values at risk; address the location and conditions under which
resource and protection objectives can be met; consider public health issues; and
be consistent with resource management objectives, activities of the area, and
environmental laws and regulations. Fire Management Plans should be based
upon the best available science.

Agency Planning Guidance

Department of Interior (DOI)
Fire Management Plans must be consistent with the DOI Interagency Fire
Management Plan Framework and subsequent bureau direction. Fire
Management Plan content may be represented in spatial, text-based and/or
digital formats.
- The DOI framework is available at:
  - https://www.nwcg.gov/committees/interagency-fire-planning-committee/resources
  - BLM – FMP Template is available at
  - NPS – FMP Template and information is available at

U.S. Forest Service (FS)
Forest Service FMPs have been replaced with a combination of enhanced
Spatial Planning contained in the Wildland Fire Decision Support System
(WFDSS) and the Fire Management Reference System (FMRS), a collection of
plans required for fire program management, such as aviation, operations,
dispatch, and fire danger operating plan products. Fire Management Planning
will be a continuing effort to ensure that guidance represented spatially in
WFDSS and the FMRS are consistent with LRMP direction, reflecting available
fire response options to move from current to desired conditions.
The FS has replaced the FSH 5109.19 with a Fire Management Planning Guide
that further describes Spatial Fire Planning and the Fire Management Reference
System (FMRS). As allowed in the Land and Resource Management Plan
(LRMP), fire response strategies should be consistent with the Cohesive
Strategy and developed in collaboration with adjoining land managers. This
Guide is at https://fsweb.wo.fs.fed.us/fire/fmp/.
Other Resources

Concepts and Definitions

Land/Resource Management Plan
A document prepared with public participation and approved by the Agency Administrator that provides guidance and direction for land and resource management activities for an administrative area. The L/RMP may identify fire's role in a particular area and for a specific benefit, or may contain general statements regarding the role of fire across the land management unit. Guidance contained in the L/RMP provides the basis for the development of strategic fire management objectives and the fire management program in the designated area.

Fire Management Plan
A plan that identifies and integrates all wildland fire management and related activities within the context of approved land/resource management plans. It defines a program to manage wildland fires (wildfire and prescribed fire). The plan is supplemented by operational plans, including but not limited to preparedness plans, preplanned dispatch plans, prescribed fire burn plans and prevention plans. Fire Management Plan’s assure that wildland fire management goals and components are coordinated.

Compliance
Compliance generally includes the full range of considerations and procedures defined by each agency to comply with laws such as (but not limited to); the National Environmental Planning Act (NEPA), Section 106 of the Archeological Resources Protection Act, Section 7 of the Endangered Species Act, Clean Air Act, Wilderness Act, Executive Orders, etc.

Spatial Fire Management Plan (SFMP)
A Spatial Fire Management Plan is a strategic plan that contains text based and spatially represented information that guides a full range of fire management activities and is supported by a land or resource management plan.

Spatial Fire Management Plan Mapsheet
A collection of one or more tables, graphics, maps or other information on a single page or poster.
Spatial Fire Management Plan Map Set
A compilation of all the mapsheets that make up a SFMP.

Connection to Other Plans
Fire Management Plans (DOI) and/or Spatial Fire Planning in WFDSS (FS) capture fire related direction and decisions from Land/Resource Management Plans (LRMP). If fire management direction and decisions were not adequately integrated into the existing LRMP, additional NEPA may be necessary.

Air Quality and Smoke Management
Clean air is a primary natural resource value in all federal units. Fire management activities which result in the discharge of air pollutants (e.g., particulates, carbon monoxide, and other pollutants from fires) are subject to, and must comply with, all applicable federal, state, interstate, and local air pollution control requirements, as specified by Section 118 of the Clean Air Act, as amended (42 USC 7418). These requirements are the same substantive, procedural, and administrative requirements that apply to a private person or other non-governmental entity. The protection of these resources must be given full consideration in fire management planning and operations.

Coordination with a state or states air regulatory office is required during the development of resource and fire management plans in order to determine procedures for compliance with state air quality regulations. Each agency should consult with their fire management unit the proper procedures for obtaining coordination with the state or states in which the unit is located, or when notified by the state that an air pollution violation has occurred.

The NWCG Smoke Management Guide for Prescribed Fire 2018 Edition (PMS 420-2), is the primary technical reference and should be referenced when developing and implementing wildland fire management plans.

NIFC smoke management website:

### Air Quality Definitions

National Ambient Air Quality Standards (NAAQS)
Uniform air quality goals established by the EPA. The EPA designated two types of national air quality standards, primary which provides public health protection and secondary which provides public welfare protection.

Criteria Pollutants
Six common air pollutants: sulfur dioxide (SO2), nitrogen oxides (NOX), carbon monoxide (CO), particulate matter (PM10 & PM2.5), ground-level ozone (O3), and lead (Pb), designated by the EPA for which primary and secondary NAAQS have been established.
State Implementation Plan (SIP)
Section 110 of the Clean Air Act requires each state to adopt and submit to the EPA an implementation plan that provides for the implementation, maintenance, and enforcement of NAAQS in each Air Quality Control Region.

Federal Implementation Plan (FIP)
A federally-implemented plan used by the EPA to ensure air quality is maintained and enforced in accordance with established NAAQS. This plan is used when a state’s SIP is found unacceptable.

Attainment Area
A geographic area that meets the primary NAAQS established by the EPA.

Note: An area may meet the established NAAQS for one criteria pollutant, but have unacceptable levels for another. An area could be in attainment for one criteria pollutant and simultaneously in nonattainment for another.

Nonattainment Area
A geographic area that does not meet the primary NAAQS limits established by the EPA to protect public health and the environment.

Note: The EPA establishes time limits for nonattainment areas to achieve specified air quality goals and may further designate nonattainment areas as extreme, severe, serious, moderate, or marginal.

Maintenance Area
Geographic area previously designated nonattainment and subsequently redesignated to attainment, for a probationary period, due to achieving the NAAQS.
Chapter 10
Preparedness

Preparedness Overview

Fire preparedness is the state of being ready to respond to wildfires based on identified objectives and is the result of activities that are planned and implemented prior to fire ignitions.

Preparedness requires:
- Identifying necessary firefighting capabilities;
- Implementing coordinated programs to develop those capabilities;
- A continuous process of developing and maintaining firefighting infrastructure;
- Predicting fire activity;
- Implementing prevention activities;
- Identifying values to be protected;
- Hiring, training, equipping, pre-positioning, and deploying firefighters and equipment;
- Evaluating performance;
- Correcting deficiencies; and
- Improving operations.

Preparedness activities should focus on developing interagency response capabilities that will result in safe, effective, and efficient fire operations aligned with risk-based fire management decisions.

Preparedness activities will be consistent with direction in the approved Land and Resource Management Plan (LRMP) and Fire Management Plan (FMP).

Preparedness Planning

At the local level, preparedness planning and the resultant activities begin with a Fire Danger Operating Plan (FDOP), which includes a number of other plans that result in coordinated actions based on the fire situation.

- BLM – Districts can use a FDOP, or Fire Danger Analysis Document (FDAD), or Fire Weather and Fire Occurrence Analysis Document (FWOAD) depending on which format best meets their needs.

References, templates, and other supporting materials pertaining to the FDOP process and related operationally-focused preparedness plans can be found at https://www.wfas.net/nfdrs2016.

- BLM – References, templates, and other supporting materials pertaining to the FDAD/FWOAD process can be found at https://sites.google.com/a/firenet.gov/blm-fire-danger-site.
Outputs from a FDOP process are used to support decisions found in many components of preparedness plans. These actions will ensure a unit is appropriately prepared to react to new and emerging wildfire incidents.

Preparedness plans should include, but are not limited to:
- Fire Danger Operating Plan (as specified by agency requirements)
- Preparedness Level Plan
- Initial Response/Pre-planned Dispatch Plan
- Step-up/Staffing Plan
- Fire Prevention/Mitigation Plan (as specified by agency requirements)
- Closure/Restriction Plan (as specified by agency requirements)
- Geographic Area Mobilization Guide (updated annually)
- Geographic Area Draw-Down guidance (updated annually)

**Fire Danger Rating**

The National Fire Danger Rating System (NFDRS) and the Weather Information Management System (WIMS) are the principle applications used by the federal land management agencies to assess fire danger. At every scale, fire danger rating is a key consideration for staffing and prepositioning preparedness resources, regulating industrial activity, or placing restrictions on public lands. Because these assessments are used by and affect a wide variety of stakeholders including federal and state agencies, local governments, industrial and other private entities, as well as the general public, participation in a recognized fire danger system and careful management of weather and fire data is vital to ensure accurate assessments and the consistent application of fire danger rating, especially for broader scale assessments.

The following requirements apply to all NFDRS-compliant weather stations managed in WIMS:
- For the primary fuel model (i.e., the first model listed in the WIMS station catalog):
  - Identify an appropriate Staffing index;
  - Identify the Staffing index breakpoints (i.e., the two highest breakpoint values and their associated percentiles*); and
  - Identify the number of Decision Classes (i.e., the number of Staffing Levels).
- If not already entered as the primary fuel model, also enter Fuel Model G:
  - Identify ERC as the Staffing index;
  - Identify the ERC breakpoints (i.e., the two highest ERC breakpoint values and their associated percentiles*); and
  - Identify the number of Decision Classes (i.e., the number of Staffing Levels).

* For units that have not performed detailed analysis to identify Fire Business Thresholds or Climatological Breakpoints, it is recommended to use the 90th and 97th percentiles as default values for these Critical Percentiles.
  - *BLM* – 80th and 95th percentiles
CHAPTER 10  PREPAREDNESS

Communication of Fire Danger

Daily Observed and Forecasted Fire Danger Outputs will be:

- Communicated daily to local fire personnel to aid in situational awareness;
- Should include the Staffing index and/or index/component used.

Fire danger will be conveyed to the public using the five Adjective Fire Danger Rating classes: low, moderate, high, very high, and extreme.

Fire Danger Operating Plan

- **BLM** – Districts can use a FDOP, or Fire Danger Analysis Document (FDAD), or a Fire Weather and Fire Occurrence Analysis Document (FWOAD) depending on which format best meets their needs.

Ideally developed for interagency field-level operations (e.g., corresponding to the area within the jurisdiction of a third-tier dispatch center), a FDOP is an integral component of local fire management planning. A FDOP documents the analysis process and the development of decision points to be used for future weather and fire occurrence situations, based on an analysis of local conditions, historic weather, and historic fire occurrence. The analysis and decision points are developed using decision support tools such as the National Fire Danger Rating System (NFDRS), the Canadian Forest Fire Danger Rating System (CFFDRS), the Palmer Drought Index, live fuel moisture data, monthly or seasonal wildland fire outlooks, seasonal climate forecasts, and wildland fire risk analyses. The analysis of historic weather and fire occurrence is conducted utilizing a statistical software program, such as but not exclusive to FireFamily Plus (FFP), which calculates fire danger indices and can correlate them to historic fire occurrence. A FDOP process blends science, historical data, established processes, and local knowledge to provide a unified framework for local interagency unit managers/administrators to make informed decisions that result in safe, efficient, and effective responses to fire situations.

Every field-level unit with a fire program should be covered by a FDOP and should participate in the planning process. FDOP developers should attend Intermediate NFDRS (S-491) and preferably, the Advanced NFDRS level courses. Units are encouraged to seek the participation of and review by NFDRS or CFFDRS Subject Matter Experts when developing a FDOP. Established FDOPs should be monitored, reviewed annually, and updated as necessary to ensure they continue to meet the preparedness needs of the local units.

- **BLM** – BLM offices are required to have a FDOP, a Fire Danger Analysis Document (FDAD), or a Fire Weather Occurrence Analysis Document (FWOAD) by May, 2020. BLM offices are required to complete and document their review every other year and updated every five years.
In conjunction with the analysis noted above, a FDOP also describes:

- Processes, such as daily input and output monitoring of the Weather Information Management System (WIMS) at https://fam.nwcg.gov/fam-web;
- Tools that will be utilized to communicate fire danger information, such as Fire Danger PocketCards, or seasonal trends analysis; and
- Related products, such as staffing, dispatch, and preparedness level plans (which can be included as components of a FDOP or linked, if presented as separate plans).

- BLM – Reference templates and other supporting materials pertaining to the FDAD/FWOAD process can be found at https://sites.google.com/a/firenet.gov/blm-fire-danger-site/.

Required minimum content for a FDOP includes the following components:

- Roles and Responsibilities
  This section of a FDOP defines the roles and responsibilities for those responsible for the development, maintenance and daily implementation of the plan, program management related to the plan, and associated training.

- Fire Danger Area Inventory
  This section of a FDOP presents the inventory of the basic components of a FDOP area, which will describe the general area, including the administrative units involved in the planning process. The fire danger area inventory will include:
  - Fire history, as well as identification of fire/ignition issues specific to the area;
  - Description of vegetation/fuels, topography, and weather/climatology resulting in the delineation of specific Fire Danger Rating Areas (FDRAs), which are broad landscapes (typically, on the scale of tens or hundreds of thousands of acres each) that are considered to have relatively homogeneous fire danger;
  - The existing weather station network and identification of any additional weather station system needs; and
  - Validation that each Remote Automated Weather Station (RAWS) meets the requirements of the ### Interagency Wildland Fire Weather Station Standards and Guidelines NWCG Standards for Fire Weather Stations (PMS 426-3).

- Operational Procedures
  This section of a FDOP establishes the procedures used to gather and process data in order to integrate fire danger rating information into decision processes. The network of fire weather stations whose observations are used to determine fire danger ratings is identified. Station maintenance responsibilities and schedules are defined. Include:

• Decision Point Analysis

This section of a FDOP describes the analysis of climatological breakpoints and fire business thresholds that trigger changes in fire danger-related decisions within an FDRA. Decision points are identified using statistical analysis software such as but not limited to FFP. Distinct selections of fuel model and fire danger index/component (NFDRS or CFFDRS) are appropriate for different management decisions (such as staffing, initial response, or industrial and public restrictions).

Because Fire Business Thresholds correlate periods of historical fire danger and fire occurrence, they generally provide the best decision support and are appropriate for identifying Staffing Levels, Dispatch Levels, fire restrictions, Preparedness Levels, fire prevention activities, and other specific readiness actions. Climatological Breakpoints, which are expressed as percentiles, may be appropriate as decision points for longer term decisions and general preparedness activities, such as seasonal staffing start/end dates or contract aircraft availability periods.

Note: WIMS relies exclusively on Climatological Breakpoints to compute Staffing Level and Adjective Rating. If Fire Business Thresholds are used as decision points, Staffing Level and Adjective Rating must be computed outside of WIMS.

• Fire Danger-based Decisions

This section of a FDOP describes the decision points used in Step-up/Staffing Plans, Initial Response/Pre-planned Dispatch Plans, Preparedness Level Plans, Prevention Plans (which include how Adjective Fire Danger Ratings are determined and will be applied), Closure/Restriction Plans, etc. It should include the rationale for the fuel model and index/component selection and the corresponding decision points for each of those plans. The plans may be included in a FDOP or be stand-alone plans.

Preparedness Level Plans

Preparedness Level Plans are required at the national, state/regional, and local levels. These plans address the five Preparedness Levels (1-5) and provide management direction based on identified levels of burning conditions (fire danger), fire activity, resource commitment/availability, such as incident management teams assigned, and other considerations (in contrast to Staffing Levels, which typically only consider fire danger, as described below).
Preparedness Level Plans may be developed by a state/regional office for agency-specific use.

Supplemental preparedness actions to consider include, but are not limited to, the following items:
- Management briefings, direction, and considerations;
- Support function: consideration given to expanded dispatch activation and other support needs (procurement, supply, ground support, and communication);
- Support staff availability outside of fire organization;
- Fire danger/behavior assessment;
- Fire information – internal and external;
- Multi-agency coordination group/Area command activation; and
- Prescribed fire direction and considerations.

Refer to the National Interagency Mobilization Guide and GACC Mobilization Guides for more information on Preparedness Level Plans.

Step-up/Staffing Plans

Step-up/Staffing plans are designed to direct incremental preparedness actions at the local level in response to changing fire danger. Each plan should address the unit’s chosen number of Staffing Levels, and the corresponding actions to consider for those changing fire danger conditions, as reviewed annually. The Step-up/Staffing Plan should be based on analysis completed as part of the unit’s FDOP and the analysis rationale, if not the entire plan, should be included as part of a FDOP.

Staffing Level

The Staffing Level should be used to guide daily internal fire operational decisions at the local level. The Staffing Level specifies appropriate daily staffing for initial response resources, such as when to implement 7-day coverage and adjusted work schedules, and the number of personnel committed to initial attack resources (in contrast to the Initial Response/Pre-planned Dispatch Plan – described below – that specifies the number of resources dispatched to an incident). Staffing Level helps define “How ready to be today?” A unit can operate with 3 to 9 levels of staffing. Most units typically use 5 (1, 2, 3, 4, 5) or 6 (1, 2, 3L, 3H, 4, 5) levels. The use of Fire Business Thresholds to determine Staffing Levels is encouraged; however, they must be computed outside of the WIMS.

The Step-up/Staffing Plan describes pre-identified escalating responses at fire business or climatological thresholds analyzed in a FDOP and FMP. A Step-up/Staffing Plan should also include recurring supplemental preparedness actions designed to enhance the unit’s fire management capability during short periods (Fourth of July, or other pre-identified events) where staffing normally needs to be increased to meet initial attack, prevention, or detection needs.
The Staffing Plan should also consider supplemental staffing actions such as, but not limited to, the following items:

- Fire prevention actions, including closures/restrictions, media messages, signing, and patrolling;
- Prepositioning or augmentation of suppression resources;
- Cooperator discussion and/or involvement;
- Safety considerations: safety messages, safety officer;
- Increased initial attack dispatch staffing; and
- Increased detection activities.

In contrast to staffing actions established for the normal range of conditions, severity is a longer duration condition that cannot be adequately dealt with under normal staffing, such as a killing frost converting live fuel to dead fuel or drought conditions. Severity is discussed later in this chapter.

### Initial Response/Pre-planned Dispatch Plans

Local-level Initial Response/Pre-planned Dispatch Plans, also referred to as run cards, specify the fire management response (e.g., number and type of suppression assets to dispatch) within a defined geographic area to an unplanned ignition, based on fire weather, fuel conditions, fire management objectives, and resource availability.

Fire Management Officers will ensure that Initial Response/Pre-planned Dispatch Plans are in place, utilized, and provide for initial response commensurate with guidance provided in the FMP and/or LRMP. Initial Response/Pre-planned Dispatch Plans will reflect agreements and annual operating plans, and will be reviewed annually prior to fire season. These plans may be modified as needed during fire season to reflect the availability of national, prepositioned, and/or severity resources.

### Fire Prevention/Mitigation Plans

Unit-level Fire Prevention/Mitigation Plans may be required and completed by conducting a wildland fire prevention/mitigation assessment. The purpose of the plan is to develop a strategy that will identify actions to reduce unwanted human-caused ignitions, thereby reducing wildland fire damages and losses, unnecessary risks to firefighters, and suppression costs. As fire danger moves from low to extreme, as defined in a FDOP, and/or human activity increases, prevention and mitigation activities must be increased to maintain effectiveness.

The Prevention/Mitigation Plan outlines how the Adjective Fire Danger Ratings are communicated to the public, and applied, in terms of responsible personnel and assigned activities. Prevention activities are intended to reduce the occurrence of unwanted human-caused fires and include, but are not limited to:

- Education (signage, school programs, radio and news releases, recreation contacts, local business contacts, exhibits);
• Engineering (public utility company, government agency/cooperator coordination);
• Enforcement/industrial program monitoring (patrol, permitting, inspections including firewood cutting, logging, mining, power line maintenance, and area closures); and
• Administration (patrol, communication, FDOP, sign and other plans and planning activities).

○ BLM – Refer to BLM MS-9212 – Fire Prevention.
○ NPS – Only units that experience more than an average of 26 human-caused fires per ten-year period are required to develop a fire prevention plan.
○ FS – Refer to FSM 5110.

National Fire Prevention Education Teams

National Fire Prevention and Education Teams (NFPETs) provide unit and agency managers with skilled and mobile personnel which have the ability to supplement or enhance ongoing local wildfire prevention and education activities, where hazard or risk is, or is expected to be, elevated above normal. Teams are highly effective in their ability to reduce unwanted human-caused wildland ignitions and are equipped to rapidly complete on-site prevention assessments and plans, initiate implementation of such plans, and to begin immediate prevention and education activities.

A basic team is composed of three personnel with these minimum qualifications:
• 1 PETL – Prevention and Education Team Leader;
• 1 PETM – Prevention and Education Team Member; and
• 1 PIO2 – Public Information Officer Type 2.

Actual team composition may include additional support positions, as determined jointly by the team leader and the ordering unit, on a case-by-case basis, based on the team’s anticipated tasking. The use of trainees is encouraged.

NFPETs can assist the local unit in preventing unwanted human-caused wildfires in several ways. They can assist the local unit to:
• Complete fire risk assessments;
• Determine the severity of the situation;
• Facilitate community awareness and education in fire prevention including prescribed burning;
• Coordinate announcement of interagency restrictions and closures;
• Coordinate fire prevention efforts with the public, special target groups, state and local agencies, and elected officials;
• Promote public and personal responsibility regarding fire prevention in the wildland/urban interface; and
• Assist Incident Management Teams in accomplishing their objectives in working with the public to develop fire protection plans.

To order an NFPET, place the order with the regional GACCs. See the National Interagency Mobilization Guide for additional information on ordering and using NFPETs.

**Fire Danger PocketCard for Firefighter Safety**

Fire Danger PocketCards provide, through a graphical interpretation of historic fire danger, a means for firefighters to understand the fire potential for a given local area during any day of the fire season. PocketCards apply to areas of uniform fire danger rating, known as FDRAs, which should be developed through an interagency FDOP process (if FDRAs aren’t defined, PocketCards may be developed based on other areas of like fire danger). The PocketCard can also be an ideal tool for local seasonal tracking of fire season severity with the addition of daily indices (see “Local Unit Seasonal Tracking” section). The Fire Danger PocketCards must adhere to the NWCG standard located at

https://fam.nwcg.gov/fam-web/pocketcards/default.htm
https://famit.nwcg.gov/applications/WIMS/PocketCards.

PocketCards should be updated following a significant fire season but; otherwise, based on the length of the station or Special Interest Group (SIG) dataset:
• 10 years or less of historic weather data, update PocketCard annually;
• 11-14 years, update every other year;
• 15 years or more, update every 3 years.

In all cases, a high quality database should be used; i.e., 5 years of poor data and 10 years of good data does not equal 15 years of quality data.

Compliance with the standard, including quality, currency, and application of the PocketCard, is the responsibility of the local fire management unit.

**BLM — *** All units will develop, maintain and ensure either a PocketCard or a Seasonal Trend Analysis is available to all personnel. Alaska is required to complete a Seasonal Trend Analysis in lieu of PocketCards. Seasonal Trend Analysis must be updated and posted at least every two weeks during fire season and PocketCards must be updated at least every other year. Final approval for PocketCards and Seasonal Trend Analyses will be obtained from the BLM representative to the NWCG Fire Danger Subcommittee (current contact information available at

Seasonal trend analysis (updated and posted at least every two weeks) is the
only requirement for communication of fire danger, although offices may use PocketCards in addition to a seasonal trend analysis if they choose to. Seasonal trend analyses will be prepared at the Predictive Service Area scale or smaller. Predictive Service Area scale analyses are typically developed and posted online by the Geographic Area Coordination Center while smaller scales are typically developed by the local unit. Hard copies should be made available in areas with limited internet connectivity. Fire management officers should ensure incoming and local resources are briefed on the seasonal trend analysis for their area (https://sites.google.com/a/firenet.gov/blm-fire-danger-site/home). Final approval for seasonal trend analyses and PocketCards will be obtained from the BLM representative to the NWCG Fire Danger Subcommittee (https://www.nwcg.gov/committees/fire-danger-subcommittee/roster).

- **BLM** – FA IM-2018-022 describes BLM required criteria for a Seasonal Trend Analysis.
- **FS** – Obtain Regional certification for Fire Danger PocketCards. Distribute PocketCards to each fireline supervisor on Type 3, 4, and 5 wildfires. Units have the option to do more frequent updates if they choose to do so.
- **BIA** – Agencies and Tribes will maintain Fire Danger PocketCards and ensure they are available to all personnel. Field-level units will identify the NWCG-compliant Fire Danger PocketCard(s) that represent its lands and ensure they are available to all firefighters and fire management personnel.

The NWCG standards for updating and posting the cards can be found at

https://fam.nwcg.gov/fam-web/pocketcards/default.htm
https://famit.nwcg.gov/applications/WIMS/PocketCards.

### Managing Weather Data in WIMS

Fire danger requires continual management in order to produce accurate results that are applied in a timely manner. Some daily weather observation variables (such as state of the weather) must be manually validated and published daily. This procedure is essential for the calculation of daily and forecasted fire danger outputs in WIMS and ensures weather data storage in the National Fire and Aviation Management (FAMWeb) Database. These efforts are coordinated with local National Weather Service fire weather meteorologists to provide timely forecasted fire danger outputs.

In addition to daily weather management, certain WIMS data requires periodic adjustment. The following should be adjusted seasonally or as appropriate:

- Live fuel moisture model inputs, including herbaceous vegetation stage, green-up and freeze date, season codes, greenness factors.
- Dead fuel moisture model inputs, including the snow flag and starting 1000 hour and X1000 fuel moisture and KBDI values.
Decision points should be reviewed annually and adjusted, as appropriate, based on statistical analysis. If decision points are adjusted, PocketCards should also be validated and updated as necessary.

**Management Actions for Remote Automated Weather Stations (RAWS)**

**Noncompliance Report**
A weekly report from Wildland Fire Management Information (WFMI) weather module displays RAWS that are more than 1 year and 45 days past their annual maintenance date. Fire weather stations are to be maintained annually per [Interagency Wildland Fire Weather Station Standards and Guidelines](https://famit.nwcg.gov/applications/RAWS). The report is widely distributed by email and available at [https://raws.nifc.gov/standards-guidelines](https://raws.nifc.gov/standards-guidelines). If a RAWS is on the report, it has either not had annual maintenance, or the documentation for annual maintenance has not been completed in WFMI. Data from these RAWS should not be used or used with caution.

**Portable RAWS**
Fire managers should ensure that locally held portable RAWS are maintained prior to use. Non-maintained portable RAWS will not be activated for data processing through WFMI weather.

- **BLM** – Refer to Chapter 2 for more guidance.

**Predictive Service Areas**
Predictive Service Areas (PSA) are sub-geographic areas of similar climate, fuels and topography defined by Geographic Area Coordination Center (GACC) meteorologists generally for forecasting purposes. The PSAs are also used to display current and forecasted conditions at the national and Geographic Area level, such as maps showing 7-day Significant Fire Potential and statistics graphs of select indices and fuel moistures. While PSAs are defined using similar criteria as Fire Danger Rating Areas (FDRAs), the PSA-based products are intended for longer range prediction purposes and strategic planning at the sub-geographic scale, and FDRA-based products are intended to guide daily operational decisions at the unit level.

**National Predictive Services Fire Potential Outlooks and Advisories**

**National Significant Wildland Fire Potential Outlook**
The National Significant Wildland Fire Potential Outlook is prepared and distributed by NICC Predictive Services on the first day of each month. The Outlook is a composite of outlooks prepared by the individual Geographic Area Predictive Services units and national discussions prepared by NICC Predictive Services. It provides fire managers at all levels with the information needed to make long range decisions concerning resource staffing and allocation. The
Outlook identifies areas where significant wildland fire activity is expected to be above or below normal levels.

The Outlook covers a four-month period. Maps for each period display areas of below normal, normal, and above normal significant wildland fire potential. A brief synopsis of the current and predicted national and GACC situation is included in the report. Specific guidance on issuance and requirements for the National Significant Wildland Fire Potential Outlook can be found in the National Interagency Mobilization Guide at https://www.nifc.gov/nicc/mobguide/index.html.

### National 7-day Significant Fire Potential Outlook
The National 7-day Significant Fire Potential Outlook is a composite of outlooks produced by each of the Geographic Area Predictive Services units. The 7-day provides a week-long projection of fuel dryness, weather, and fire potential. The 7-day depicts a nationwide view of the significant fire potential for the next seven days with links to the individual Geographic Area 7-day outlooks. The system is database-driven and is updated periodically as each Geographic Area Predictive Services unit posts its outlook. Each Geographic Area Predictive Services unit will determine whether to routinely produce a morning or afternoon product. Issuance times for each Area’s outlook can be found in the Geographic Area Mobilization Guide and/or in its National Weather Service/Predictive Services Annual Operating Plan. Guidance on issuance and requirements for National 7-day Significant Fire Potential Outlook can be found in the National Interagency Mobilization Guide at https://www.nifc.gov/nicc/mobguide/index.html.

### Fuels and Fire Behavior Advisories
Fuels and Fire Behavior Advisories are alerts issued as needed to address an exceptional or extreme circumstance that could threaten firefighter or public safety. Conditions that could be reasonably expected normally do not warrant a Fuels and Fire Behavior Advisory. Advisories will focus on fuel conditions and fire behavior that have long term impacts, not atmospheric conditions that can be found in other Predictive Services products. Advisories will highlight and give specific examples of conditions that are currently on-going and have been experienced in the field. Advisories should be tailored so that firefighters at all experience levels can recognize the situation and act accordingly. Advisories should be coordinated with neighboring administrative units to ensure that all areas with similar conditions are being addressed. All Advisories that extend beyond a single local administrative unit or that will be posted on the national Advisory map must be coordinated with the NICC and GACC Predictive Service Units. Each Advisory must include a map of the affected area. Only one Advisory may be active at any time over any area. If multiple Advisory conditions are present incorporate them into one Advisory. Advisories will remain in effect for 14 days from issuance. If the Advisory conditions continue beyond the 14 days a new Advisory will need to be issued to update conditions.
and circumstances with more timely information. At the request of the issuer
Advisories may be lifted before the 14 days has passed. For the Fuels and Fire
Behavior Advisory Template and Protocols, see

**National Intelligence Products**

See the *National Interagency Mobilization Guide*, Chapter 60.

**Local Unit Seasonal Tracking**

- **BLM** – Districts can use a FDOP, or Fire Danger Analysis Document
  (FDAD), or a Fire Weather and Fire Occurrence Analysis Document
  (FWOAD) depending on which format best meets their needs.

As identified in the FMP and/or FDOP, each unit selects and compares to
normal, the current value and seasonal trend of one (or more) of the following
indicators which are most useful in predicting fire season severity and duration
in its area. By downloading daily weather observations and adding them to the
database, FFP or similar statistical analysis software can be used to produce the
current NFDRS, CFFDRS, and fuel moisture products, including statistical
graphs of various indices and components such as:

- NFDRS (or CFFDRS) index and/or component values;
- Palmer Drought or Keetch-Byram Drought Index;
- 1000-hour fuel moisture;
- 100-hour fuel moisture;
- Live fuel moisture; and/or
- Growing Season Index.

The seasonal trend of each selected indicator is graphically compared to normal
and all-time worst (for the historical period analyzed). This comparison is
updated regularly and posted in dispatch and crew areas. The mechanism that is
recommended for comparing and displaying these items is a PocketCard and/or
fire danger seasonal graphs, which have been developed and used at the local
unit to inform and educate firefighters on local conditions. PocketCards and
seasonal fire danger graphs should use the same index and fuel model to display
information so that the two can be easily compared.

Any local seasonal trends of indices/components or fuel moisture values should
be communicated to the GACC Predictive Services unit to augment their
assessments. Trends should be monitored throughout the fire season and
communication should be on-going, particularly when significant changes in key
indicators occur.

**Fire Severity Funding**

Fire severity funding is the authorized use of suppression operations funds
(normally used exclusively for suppression operations and distinct from
preparedness funds) for extraordinary preparedness activities that are required
due to:

- FMP, FDOP, or Annual operating plan criteria that indicate the need
  for additional preparedness/suppression resources. The plan(s) should
  identify thresholds for severity needs.
- Anticipated fire activity will exceed the capabilities of local resources.
- Fire seasons that either start earlier or last longer than identified in a FDOP.
- An abnormal increase in fire potential or danger not planned for in existing
  preparedness plans.

Agency established decision points or thresholds will be used to determine
severity funding needs.

The objective of fire severity funding is to appropriately manage risk and adjust
planned specific actions and staffing in excess of the budgeted program to
improve initial response capabilities and wildfire prevention activities, when
extraordinary weather and fire conditions may result in the occurrence, or
substantial threat of occurrence, of wildfires with significant damage potential.

Fire severity funding is not intended to:

- Raise preparedness funding levels to cover differences that may exist
  between funds actually appropriated and those identified in the fire planning
  process.
  - BLM – Refer to Chapter 2 for more guidance.
  - NPS/FWS/FS – Mitigate threats to Threatened and Endangered
    Species habitat, wildland/urban interface, or other values identified in

Typical Uses

Fire severity funds are typically used to:

- Increase prevention activities;
- Temporarily increase firefighting staffing;
- Pay for standby;
- Preposition initial attack suppression forces;
- Provide additional aerial reconnaissance; and
- Provide for standby aircraft availability.

Authorization

Authorization to use severity funding is provided in writing based on a written
request with supporting documentation. Authorization is on a line item basis and
comes with a severity cost code. Agencies will follow their administrative
procedures for issuing severity cost codes. Authorization is provided for a
maximum of 30 days per request; however, regardless of the length of the
authorization, use of severity funding must be terminated when abnormal
conditions no longer exist. If the fire severity situation extends beyond the 30-
day authorization, the Unit/State/Region/Agencies/Tribes must prepare a new severity request.

State/Regional-Level Fire Severity Funding
Each fiscal year the national office will provide each state/region with funding and a severity cost code for state/regional short-term severity needs (e.g., wind events, cold dry front passage, lightning events, and unexpected events such as off road rallies, cultural events) that are expected to last less than one week. Expenditure of these funds is authorized by the State/Regional Directors at the written request of the Agency Administrator. State/Regional Directors are responsible and accountable for ensuring that these funds are used only to meet severity funding objectives and that amounts are not exceeded. The national office will notify the State/Regional Director, State/Regional Budget Officer, and the State/Regional FMO when the severity cost code is provided.

- **BLM** – Refer to Chapter 2 and the BLM Fire Operations website (http://web.blm.gov/internal/fire/fire_ops/index.html) for additional short-term severity guidance.
- **NPS** – Parks have the authority to approve “Step-up” actions only, as defined in their fire management plan. Regional offices approve severity (long term – up to 30 days) for parks up to $100,000 per severity event.
- **FWS** – Refer to the Fire Management Handbook Chapter 10 for additional short-term severity guidance.
- **FS** – Refer to the Fire Management Handbook Chapter 10 for additional short-term severity guidance.
- **BIA** – Regional Offices will establish procedures for approval and monitoring short-term severity usage/funds within their respective regions.

National-Level Fire Severity Funding
National Agency Fire Directors or their delegates are authorized to allocate fire severity funding under specific conditions stated or referenced in this chapter. Expenditure of these funds is authorized by the appropriate approving official at the written request of the State/Regional Director. Approved severity funding will be used only for the preparedness activities and timeframes specifically outlined in the authorization, and only for the objectives stated above.

- **BLM** – Refer to Chapter 2 and the BLM Fire Operations Website for additional national severity guidance.
- **NPS** – National office approves all single or cumulative requests exceeding $100,000.
- **FWS** – Additional information may be found on the FWS Sharepoint site or the current US Fish and Wildlife Service Fire Business Guide.
- **FS** – Regional offices approve all severity requests.
- **BIA** – Refer to Chapter 6 for additional guidance.

Appropriate Fire Severity Funding Charges and Activities
Severity funded personnel and resources will not use a severity cost code while assigned to wildfires. The wildfire FireCode number will be used instead.

**Labor**

Appropriate labor charges include:
- Regular pay for non-fire personnel;
- Regular pay for seasonal/temporary fire personnel outside their normal fire funded activation period; and
- Overtime pay for all fire and non-fire personnel.

Severity funded personnel and resources must be available for immediate initial attack regardless of the daily task assignment.

**Vehicles and Equipment**

Appropriate vehicle and equipment charges include:
- GSA lease rate and mileage;
- Hourly rate or mileage for Agency owned vehicles; and
- Commercial rentals and contracts.

**Aviation**

Appropriate aviation charges include:
- Contract extensions;
- The daily minimum cost for call when needed (CWN) aircraft;
- Preposition flight time; and
- Support expenses necessary for severity funded aircraft (facility rentals, utilities, telephones, etc.).

**Travel and Per Diem**

Severity funded personnel in travel status are fully subsisted by the government in accordance with their agency regulations. Costs covered include:
- Lodging;
- Government provided meals (in lieu of per diem);
- Airfare (including returning to their home base);
- Privately owned vehicle mileage (with prior approval); and
- Other miscellaneous travel and per diem expenses associated with the assignment.

**Prevention Activities**

Appropriate prevention activities include:
- Funding Prevention Teams (Prevention teams will be mobilized as referenced in the National Interagency Mobilization Guide, Chapter 20).
- Implementing local prevention campaigns, to include community risk assessments, mitigation planning, enforcement, outreach, and education.
- Augmenting patrols.
• **Note:** Non-fire funded prevention team members should charge base 8 and overtime to the severity cost code for the length of the prevention activities assignment. Fire funded personnel should charge overtime only to the severity cost code for the length of the prevention activities assignment.

**Inappropriate Fire Severity Funding Charges**

• To cover differences that may exist between funds actually appropriated (including rescissions) and those identified in the fire planning process.

• Administrative surcharges, indirect costs, fringe benefits.

• Equipment purchases.

• Purchase, maintenance, repair, or upgrade of vehicles.
  
  ○ **NPS/FWS/BIA** – Severity-related repair and maintenance of agency vehicles and equipment may be funded by severity because they do not have a use rate covering these charges. These charges must be approved by the National Office.

• Purchase of radios.

• Purchase of telephones.

• Purchase of pumps, saws, and similar suppression equipment.

• Aircraft availability during contract period.

• Cache supplies that are normally available in fire caches.

• Fixed ownership rate vehicle costs.

**Interagency Severity Requests**

Agencies working cooperatively in the same geographic area must work together to generate and submit joint requests, to minimize duplication of required resources, reduce interagency costs, and to utilize severity funded resources in an interagency manner. However, each agency should request funds only for its fair-share contributions or offsets for pooled, interagency resources/activities. The joint request should be routed simultaneously through each agency’s approval system, and the respective approving official will issue an authorization that specifies allocations by agency.

**Requesting Fire Severity Funding**

Each agency has established severity funding request protocols. The completed and signed request is submitted from the State/Regional Director to the appropriate approving official as per the sequence of action outlined below. Authorizations will be returned in writing.

Severity funding request information for all agencies can be found at https://www.nifc.gov/policies/pol_severity_funding.html.

**Sequence of Action and Responsible Parties for Severity Funding Requests**
<table>

</tbody>
</table>

1. **FS** – Severity codes are pre-established at the beginning of the fiscal year.
2. Requests are approved at the regional office with a copy to the national office for those exceeding $250,000 or including National Shared Resources.

**Labor Cost Coding For Fire Severity Funded Personnel**

Fire preparedness personnel outside their normal activation period, employees whose regular salary is not fire funded, and Administratively Determined (AD) employees hired under an approved severity request should charge regular time and approved non-fire overtime to the severity suppression operations subactivity and the requesting office’s severity cost code.

Fire preparedness personnel should charge their regular planned salary (base-eight) to their budgeted subactivity using their home unit’s location code.
Overtime associated with the severity request should be charged to the severity suppression operations subactivity and the requesting office’s severity cost code.

Regular hours worked in suppression operations will require the use of the appropriate fire subactivity with the appropriate FireCode number. Overtime in fire suppression operations will be charged to the suppression operations subactivity with the appropriate FireCode number.

Employees from non-federal agencies should charge their time in accordance with the approved severity request and the appropriate local and statewide agreements. An interagency agreement for reimbursement must be established.

The Interagency Agreement for Fire Management can be used as a template.

- **FS** – Firefighters under a severity order will continue to charge base salary to a B-code and overtime to the severity S-code, even if it is outside their funded tour. If called out to an incident these resources will be under the same rules of charging base salary to a B-code and overtime to the P-code. Regions must manage funding of tours within allocations provided. Firefighters working on an incident beyond their planned and funded tour will continue to charge their Base 8 hours to a B-code (WFPR). Regions must contact WO FAM if they believe they might exceed their allocations. All firefighters charge their Base 8 hours to Preparedness job codes – either WFPR or a B-code unless they are working on other non-fire project work outside of fire season. These situations are accounted for in the allocations by basing the allocations on the last three years of salary expenditures.

**Documentation**

The unit/state/regional and national office will document and file accurate records of severity funding activity. This will include complete severity funding requests, written authorizations, and expenditure records.

**Severity Funding Reviews**

State/Regional and National offices should ensure appropriate usage of severity funding and expenditures. This may be done as part of their normal agency fire program review cycle.

**Qualification for Professional Liability Insurance Reimbursement**

Public Law 110-161 provides for reimbursement for up to one half of the cost incurred for professional liability insurance (including any administrative processing cost charged by the insurance company) for temporary fire line managers, management officials, and law enforcement officers.

To qualify for reimbursement, “temporary fire line managers” must meet one of the following three criteria:

- Provide temporary supervision or management of personnel engaged in wildland fire activities;
• Provide analysis or information that affects a supervisor's or manager's decision about a wildland fire;
• Direct the deployment of equipment for a wildland fire, such as a base camp manager, an equipment manager, a helicopter coordinator, or an initial attack dispatcher.
  ○ **FS** – Refer to https://fsweb.asc.fs.fed.us/HR.
Chapter 11
Incident Management and Response

National Response Framework

The National Response Framework presents the guiding principles that enable all response partners to prepare for and provide a unified national response to disasters and emergencies—from the smallest incident to the largest catastrophe. The Framework establishes a comprehensive, national, all-hazards approach to domestic incident response. Information about the National Response Framework can be found at https://www.fema.gov/media-library/assets/documents/117791.

National Incident Management System

The National Wildfire Coordinating Group (NWCG) follows the National Incident Management System (NIMS), which is a component of the National Response Framework. NIMS provides a universal set of structures, procedures, and standards for agencies to respond to all types of emergencies. NIMS will be used to complete tasks assigned to the interagency wildland fire community under the National Response Framework.

Incident Management and Coordination Components of NIMS

Effective incident management requires:
• Command organizations to manage on-site incident operations.
• Coordination and support organizations to provide direction and supply resources to the on-site organization.

Incident Command System (ICS)

The ICS is the on-site management system used in NIMS. The ICS is a standardized emergency management system specifically designed to provide for an integrated organizational structure that reflects the complexity and demands of single or multiple incidents, without being hindered by jurisdictional boundaries. ICS is the combination of facilities, equipment, personnel, communications, and procedures operating within a common organizational structure to manage incidents. ICS will be used by the agencies to manage wildland fire operations and all-hazard incidents.

Wildfire Complexity

Wildfires are typed by complexity, from Type 5 (least complex) to Type 1 (most complex). The ICS organizational structure develops in a modular fashion based on the complexity of the incident. Complexity is determined by completing a Risk and Complexity Assessment (Refer to samples in Appendix E and F).

Incidents not meeting the recommended incident typing characteristics in the Wildland Fire Incident Management Field Guide (PMS 210) and later in this
chapter should have a documented Risk and Complexity Assessment (Appendix E) verifying the command organization is appropriate.

Wildfire Risk and Complexity Assessment
The National Wildfire Coordinating Group has adopted the Risk and Complexity Assessment (RCA) form as a replacement for the Incident Complexity Analysis form and the Organizational Needs Assessment form. The RCA assists personnel with evaluating the situation, objectives, risks, and management considerations of an incident and recommends the appropriate organization necessary to manage the incident. The Risk and Complexity Assessment is found in Appendix E.

The RCA also includes common indicators of incident complexity to assist firefighters and managers with determining incident management organizational needs. These common indicators are found in Appendix F.

The RCA can be used to populate the Relative Risk Assessment and Organization Assessment portions of the Wildland Fire Decision Support System (WFDSS).

The RCA is also available at https://www.nwcg.gov/publications/210.

Command Organizations

Incident Command
All wildfires, regardless of complexity, will have an Incident Commander (IC). The IC is a single individual responsible to the Agency Administrator(s) for all incident activities. ICs are qualified according to the National Incident Management System: Wildland Fire Qualification System Guide NWCG Standards for Wildland Fire Position Qualifications (PMS 310-1) and any additional agency requirements. The IC may assign personnel to any combination of ICS functional area duties in order to operate safely and effectively. ICS functional area duties should be assigned to the most qualified or competent individuals available.

Incident Commanders are responsible for:

- Obtaining a Delegation of Authority and/or expectations to manage the incident from the Agency Administrator. For Type 3, 4, or 5 incidents, delegations/expectations may be written or oral;
  - BLM – BLM District Managers will provide a written Delegation of Authority and expectations to the unit's Type 3, 4, and 5 Incident Commanders annually prior to fire season.
- Ensuring that safety receives priority consideration in all incident activities, and that the safety and welfare of all incident personnel and the public is maintained. Ensure standardized incident and communication center protocols identified in the Medical Incident Report section of the IRPG are utilized. The Medical Incident Report is found in the Medical Plan (ICS-206-WF) form available at https://www.nwcg.gov/publications/ics-forms;
• Assessing the incident situation, both immediate and potential;
• Maintaining command and control of the incident management organization;
• Ensuring transfer of command is communicated to host unit dispatch and to all incident personnel;
• Assisting with WFDSS documentation and support in close coordination with the local office(s), if requested by the delegating agency administrator(s);
• Developing incident objectives, strategies, and tactics, consistent with the Delegation of Authority and latest published WFDSS decision(s);
• Developing the organizational structure necessary to manage the incident;
• Approving and implementing the Incident Action Plan, as needed;
• Ordering, deploying, and releasing resources;
• Ensuring incident financial accountability and expenditures meet agency policy and standards; and
• Ensuring incident documentation is complete.

For purposes of initial attack, the first IC on scene qualified at any level will assume the duties of initial attack IC. The initial attack IC will assume the duties and have responsibility for all suppression efforts on the incident up to his/her level of qualification until relieved by an IC qualified at a level commensurate with incident complexity.

As an incident escalates and de-escalates, a continuing reassessment of complexity should be completed to validate the current command organization or identify the need for a different level of incident management.

An IC is expected to establish the appropriate organizational structure for each incident and manage the incident based on his/her qualifications, incident complexity, and span of control. If the incident complexity exceeds the qualifications of the current IC, the IC must continue to manage the incident within his/her capability and span of control until replaced.

**On-site Command Organizations**

Command organizations responsible for incident management include:

• Type 5 Incident Command;
• Type 4 Incident Command;
• Type 3 Incident Command;
• Type 2 Incident Command;
• Type 1 Incident Command;
• National Incident Management Organizations (NIMO);
• Area Command; and
• Unified Command.
CHAPTER 11 INCIDENT MANAGEMENT AND RESPONSE

Incident Characteristics

Type 5 Incident Characteristics
- Ad hoc organization managed by a Type 5 Incident Commander.
- Primarily local resources used.
- ICS command and general staff positions are not activated.
- Resources vary from two to six firefighters.
- Incident is generally contained within the first burning period and often within a few hours after resources arrive on scene.
- Additional firefighting resources or logistical support are not usually required.
- May require a Published Decision in WFDSS.

Type 4 Incident Characteristics
- Ad hoc organization managed by a Type 4 Incident Commander.
- Primarily local resources used.
- ICS command and general staff positions are not activated.
- Resources vary from a single resource to multiple resource task forces or strike teams.
- Incident is usually limited to one operational period. However, incidents may extend into multiple operational periods.
- Written Incident Action Plan (IAP) is not required. A documented operational briefing will be completed for all incoming resources. Refer to the Incident Response Pocket Guide for a briefing checklist.
- May require a Published Decision in WFDSS or other decision support document.

Type 3 Incident Characteristics
- Ad hoc or pre-established Type 3 organization managed by a Type 3 Incident Commander.
- The IC develops the organizational structure necessary to manage the incident. Some or all of ICS functional areas are activated, usually at the Division/Group Supervisor and/or unit leader level.
- The incident complexity analysis process is formalized and certified daily with the jurisdictional agency. It is the IC’s responsibility to continually reassess the complexity level of the incident. When the assessment of complexity indicates a higher complexity level, the IC must ensure that suppression operations remain within the scope and capability of the existing organization and that span of control is consistent with established ICS standards.
- Local and non-local resources used.
- Resources vary from several resources to several task forces/strike teams.
- May be divided into divisions.
- May require staging areas and incident base.
- May involve low complexity aviation operations.
• May involve multiple operational periods prior to control, which may require a written Incident Action Plan (IAP).
• Documented operational briefings will occur for all incoming resources and before each operational period. Refer to the Incident Response Pocket Guide for a briefing checklist.
• ICT3s will not serve concurrently as a single resource boss or have any non-incident related responsibilities.
• May require a Published Decision in WFDSS.
• May require a written Delegation of Authority.

Type 3 Incident Command
When ICT3s are required to manage an incident, they must not have concurrent responsibilities that are not associated with the incident and they must not concurrently perform single resource boss duties.

### On As of October 1, 2019, PMS 310-1 qualifications as Operations Section Chief Type 3 (OPS3), Planning Section Chief Type 3 (PSC3), Logistics Section Chief Type 3 (LSC3), and Finance Section Chief Type 3 (FSC3) will be required for national mobilization. In these positions to Type 3 incidents outside the employee’s local dispatch area. Reference NWCG Memorandum No. 18-002, National Mobilization Requirements for Type 3 General Staff Positions – Change of Implementation date, and Clarification of Position Task Book (PTB) Administration at https://www.nwcg.gov/executive-board/correspondence. Reference NWCG Memorandum No. 18-002, National Mobilization Requirements for Type 3 General Staff Positions – Change of Implementation date, and Clarification of Position Task Book (PTB) Administration at https://www.nwcg.gov/sites/default/files/memos/cb-m-18-002.pdf.

### Prior to October 1, 2019, the following interim standards or locally established standards will be used for Type 3 positions. These interim position standards may be used for national mobilization as well as local incidents to provide time for employees to meet the PMS 310-1 standards. The following position standards can be used for local incidents.

<table>
<thead>
<tr>
<th>Type 3 Functional Responsibility</th>

<td>Local entities can establish level of skill to perform function.</td>
</tr>
</tbody>
</table>
After October 1, 2019, the PMS 310-1 position standard will be required for national mobilization for Type 3 Command and General Staff positions.

Type 2 Incident Characteristics
- Pre-established incident management team managed by Type 2 Incident Commander.
- ICS command and general staff positions activated.
- Many ICS functional units required and staffed.
- Geographic and/or functional area divisions established.
- Complex aviation operations.
- Incident command post, base camps, staging areas established.
- Incident extends into multiple operational periods.
- Written Incident Action Plan required for each operational period.
- Operations personnel often exceed 200 per operational period and total personnel may exceed 500.
- Requires a Published Decision in WFDSS or other decision support document.
- Requires a written Delegation of Authority to the Incident Commander.

Type 2 Incident Command
These ICs command pre-established Incident Management Teams that are configured with ICS Command Staff, General Staff and other leadership and support positions. Personnel performing specific Type 2 command and general staff duties must be qualified at the Type 1 or Type 2 level according to the PMS 310-1 standards and any additional agency requirements.

Type 1 Incident Characteristics
- Pre-established Incident Management Team managed by Type 1 Incident Commander.
- ICS command and general staff positions activated.
- Most ICS functional units required and staffed.
- Geographic and functional area divisions established.
- May require branching to maintain adequate span of control.
- Complex aviation operations.
- Incident command post, incident camps, staging areas established.
- Incident extends into multiple operational periods.
- Written Incident Action Plan required for each operational period.
- Operations personnel often exceed 500 per operational period and total personnel may exceed 1000.
- Requires a Published Decision in WFDSS or other decision support document.
- Requires a written Delegation of Authority to the Incident Commander.
Type 1 Incident Command

These ICs command pre-established Incident Management Teams that are configured with ICS Command Staff, General Staff and other leadership and support positions. Personnel performing specific Type 1 Command and General Staff duties must be qualified at the Type 1 level according to the PMS 310-1 standards and any additional agency requirements.

Incident Management Teams

Area Command

Area Command is an Incident Command System organization established to:

- Oversee the management of large or multiple incidents to which several Incident Management Teams have been assigned. Area Command may become Unified Area Command when incidents are multi-jurisdictional; or
- Provide strategic support and coordination services to decision makers such as Geographic Area MAC Groups, sub-geographic area MAC Groups, Agency Administrators, Geographic Area Coordination Centers, emergency operations centers, agency operations centers, or FEMA Joint Field Offices.

The primary determining factor for establishing Area Command is the span of control of the Agency Administrator.

National Area Command teams are managed by the National Multi-Agency Coordinating Group (NMAC) and are comprised of the following:

- Area Commander (ACDR);
- Assistant Area Commander, Planning (AAPC);
- Assistant Area Commander, Logistics (AALC); and
- Area Command Aviation Coordinator (ACAC).

Depending on the complexity of the interface between the incidents, other specialists may also be assigned in areas such as aviation safety, information, long-term fire planning, and risk assessment and analysis.

Area Command functions typically include:

- Establishing overall strategy, objectives, and priorities for the incident(s) under its command;
- Allocating critical resources according to agency priorities (i.e., aircraft, IHCs, incident support needs such as medical services, communication and internet operability equipment);
- Ensuring that incidents are properly managed;
- Coordinating mobilization, team transitions, and demobilization;
- Supervising, managing, and evaluating Incident Management Teams under its command; and
- Minimizing duplication of effort and optimize effectiveness by combining multiple agency efforts under a single Area or Geographic Theater Plan.

See Appendix M for Area Command (AC) Complexity Assessment.
Type 1 Incident Management Teams

Type 1 Teams are managed by Geographic Area Multi-Agency Coordinating Groups and are mobilized by the Geographic Area Coordination Centers. At national preparedness levels 4 and 5, these teams are managed by the National Multi-Agency Coordinating Group (NMAC).

National Incident Management Organization (NIMO)

NIMO Teams are managed by the Forest Service Fire and Aviation’s Washington Office and are ordered thru the NICC. The mission of NIMO is to promote continuous improvement by introducing innovative concepts, approaches, and technologies while providing adaptive and agile incident management. The NIMO Coordinator can assist ordering units to order teams in short or long configurations, customized configuration for special capabilities, and managing long duration incidents.

NIMO’s standard configuration consists of seven Command and General Staff positions qualified at the Type 1 level. If needed, NIMO can expand to meet various complexity levels.

Types of NIMO assignments include:

- National or Geographic Area/Regional support to provide strategic planning assistance, during incident review, and feedback.
- Work with Type 2 candidates on Type 1 incidents for successional planning.
- To serve as mentors, trainers and evaluators on a Type 2 or Type 3 incident or designated projects.
- Manage multiple Type 3 ignitions within an area (i.e., GACC, Forest, Zone).
- Support and mentoring to an Agency Administrator with a complex fire situation.
- International assignments.
- All-hazard incidents.
- Mission-specific assignments – NIMO will continue to assist Forest Service units and other agencies with special missions. Examples from the past include R2 Bark Beetle, R5 Marijuana Eradication, or support to Regions as a Force Multiplier during higher planning/activity levels.

Type 2 Incident Management Teams

Most Type 2 teams are managed by Geographic Area Multi-Agency Coordinating Groups and are coordinated by the Geographic Area Coordination Centers. Some Type 2 teams are managed by non-federal agencies (e.g., state or local governments) and availability of these teams is determined on a case by case basis.

Unified Command

Unified Command is an application of the Incident Command System used when there is more than one agency with incident jurisdiction or when incidents
cross political jurisdictions. Under Unified Command, agencies work together through their designated Incident Commanders at a single incident command post to establish common objectives and issue a single Incident Action Plan. Unified Command may be established at any level of incident management or Area Command. Under Unified Command, all agencies with jurisdictional responsibility at the incident contribute to the process of:

- Determining overall strategies;
- Selecting alternatives;
- Ensuring that joint planning for tactical activities is accomplished; and
- Maximizing use of all assigned resources.

Advantages of Unified Command are:

- A single set of objectives is developed for the entire incident;
- A collective approach is used to develop strategies to achieve incident objectives;
- Information flow and coordination is improved between all jurisdictions and agencies involved in the incident;
- All involved agencies have an understanding of joint priorities and restrictions; and
- No agency’s legal authorities will be compromised or neglected.

All-Hazard Incident Management Teams (IMTs) and Other Non-Wildland Fire IMT

Many different entities have developed IMTs based on ICS core competencies under the National Incident Management System (NIMS). See Chapter 8 for more information.

Coordination and Support Organizations

Organizations that provide coordination and support to on-site command organizations include:

- Initial Attack Dispatch;
- Expanded Dispatch;
- Buying/Payment Teams;
- National and Geographic Area Coordination Centers (refer to Chapter 8); and
- Local, Geographic Area, and National Multi-Agency Coordinating (MAC) Groups.

Refer to Chapter 19 for Initial Attack and Expanded Dispatch information.

Buying/Payment Teams

Buying/Payment Teams support incidents by procuring services, supplies, and renting land, facilities, and equipment. These teams may be ordered when incident support requirements exceed local unit capacity. These teams report to the Agency Administrator or the local unit administrative officer. See the
CHAPTER 11  INCIDENT MANAGEMENT AND RESPONSE

Multi-Agency Coordination (MAC)
Multi-Agency Coordination Groups are part of the National Interagency Incident Management System (NIIMS) and are an expansion of the off-site coordination and support system. MAC groups are activated by the Agency Administrator(s) when the character and intensity of the emergency situation significantly impacts or involves other agencies. A MAC group may be activated to provide support when only one agency has incident(s). The MAC group is made up of agency representatives who are delegated authority by their respective Agency Administrators to make agency decisions and to commit agency resources and funds. The MAC group relieves the incident support organization (dispatch, expanded dispatch) of the responsibility for making key decisions regarding prioritization of objectives and allocation of critical resources. The MAC group makes coordinated Agency Administrator level decisions on issues that affect multiple agencies. The MAC group is supported by situation, resource status and intelligence units who collect and assemble data through normal coordination channels.

MAC group direction is carried out through dispatch and coordination center organizations. When expanded dispatch is activated, the MAC group direction is carried out through the expanded dispatch organization. The MAC group organization does not operate directly with Incident Management Teams or with Area Command Teams, which are responsible for on-site management of the incident.

MAC groups may be activated at the local, geographic, or national level. National level and Geographic Area level MAC groups should be activated in accordance with the preparedness levels criteria established in the National and Geographic Area Mobilization Guides.

The MAC Group Coordinator facilitates organizing and accomplishing the mission, goals and direction of the MAC group. The MAC group coordinator:
• Provides expertise on the functions of the MAC group and on the proper relationships with dispatch centers and incident managers;
• Fills and supervises necessary unit and support positions as needed, in accordance with coordination complexity;
• Arranges for and manages facilities and equipment necessary to carry out the MAC group functions;
• Facilitates the MAC group decision process; and
• Implements decisions made by the MAC group.

Activation of a MAC group improves interagency coordination and provides for allocation and timely commitment of multi-agency emergency resources. Participation by multiple agencies in the MAC effort will improve:
• Overall situation status information;
• Incident priority determination;
• Resource acquisition and allocation;
• State and federal disaster coordination;
• Political interfaces;
• Consistency and quality of information provided to the media and involved agencies; and
• Anticipation of future conditions and resource needs.

Wildland Fire Decision Support System (WFDSS)

The Wildland Fire Decision Support System (WFDSS) is a web-based decision support system that provides a single dynamic documentation system for use beginning at the time of discovery and concluding when the fire is declared out. WFDSS is the decision support documentation platform for all federal wildfires. WFDSS allows the Agency Administrator to describe and assess the fire Situation, develop Incident Objectives and Requirements, develop a Course of Action, evaluate Relative Risk, complete an Organization Assessment, document the Rationale and publish a Decision.

For detailed information on the tools and capabilities in WFDSS, how managers may use the tools, and suggested WFDSS refresher training items, refer to Appendix N and https://wfdss.usgs.gov/wfdss/WFDSS_Home.shtml.

The Integrated Reporting of Wildfire Information (IRWIN) data exchange system passes wildfire data through the IRWIN system to automatically populate some fields on the WFDSS information tab (e.g., Incident Name, Point of Origin, etc.) and for those using a Computer Aided Dispatch (CAD), has replaced the need to load fires individually into WFDSS, for more information on the IRWIN project see https://www.forestsandrangelands.gov/WFIT/applications/IRWIN/index.shtml.

In order to publish a decision consistent with the Land Use Plan, applicable fire-related protection and resource management objectives and requirements from Land Use Plans and/or FMPs must be incorporated pre-season into the WFDSS via the Data Management tab.

• **NPS** – NPS recommends pre-loading management direction into WFDSS pre-season.
• **FWS/BIA** – FWS and BIA units are not required to pre-load management direction into WFDSS.

A Published Decision documents:
• Strategic direction from Land/Resource Management Plans and/or Fire Management Plans;
• Incident objectives and requirements;
• Incident management strategies and courses of action;
• Estimated costs for the duration of the incident;
All affected jurisdictions that participated in the decision process and concurred with the strategies selected; That Agency Administrator(s) has reviewed and approved the decision; and The framework for the actions to be performed under the Delegation of Authority which authorizes an Incident Commander to operate on a specific unit(s). See Agency Administrator Responsibilities under “Managing the Incident” heading and Appendix G for Delegation of Authority specifics.

The level of documentation in a decision should be commensurate with incident complexity, cost, and/or potential duration and spread. As incident complexity changes, additional analysis may be necessary to inform decision making.

**Initial Decision**

All fires will have a Published Decision within WFDSS when they:

- Escape initial attack; or
- Exceed initial response; or
- Include objectives with both protection and resource benefit elements consistent with land management planning documents.

Agency-specific direction established in memos or other policy documents may further define WFDSS documentation requirements. Agency Administrator roles and responsibilities are addressed in agency chapters 2-6.

Additional considerations for determining that a decision may be needed include:

- The fire affects or is likely to affect more than one agency or more than one administrative unit within a single agency (for example more than one National Forest);
- The fire is burning into or expected to burn into wildland-urban interface;
- Significant safety or other concerns such as air quality are present or anticipated; and
- The Relative Risk Assessment indicates the need for additional evaluation and development of best management practices for achieving land and resource objectives.

**New Decision**

A new decision is required when:

- The Periodic Assessment indicates the Course of Action is no longer valid; or
- The fire moves beyond the Planning Area; or
- The incident exceeds an established agency threshold for approval authority (cost or complexity); or
- The Risk and Complexity Assessment indicates that the incident exceeds existing management capability.
Considerations for determining when a new decision may be needed:

- Costs are expected to exceed the estimated final costs in the current Decision; or
- Management Action Points have changed since the current Decision was published.

Additional information about WFDSS can be found in Appendix N. User support information, training materials, and other resources can be found at the WFDSS homepage, [https://wfdss.usgs.gov/wfdss/WFDSS_Home.shtml](https://wfdss.usgs.gov/wfdss/WFDSS_Home.shtml).

**WFDSS Decision Approval and Publication**

All agencies having jurisdiction within a WFDSS Planning Area must be provided the opportunity to participate as soon as possible in the decision-making process. In situations where one agency provides fire protection under agreement or contract to a jurisdictional agency, both jurisdictional and protecting agencies should be involved in the process. Of note, in order for one federal agency administrator to be delegated authority as an “Approver” for another agency, a pre-season agreement would generally need to be developed that would describe those authorities (see your agency’s delegation of authority policies for additional guidance).

Every wildfire decision will consider the development of protection objectives which also provide for safety of firefighter and the public and minimize the loss of, and damage to, property, cultural and natural resources.

- **FS** – Decisions are required to include protection objectives.

Units considering developing a decision for a group of fires, merged fires, or a complex should refer to the WFM R&D Whitepaper “WFDSS Incident Groups and Decisions (6/26/2016)” for considerations until functionality is updated within the system. NWCG Memorandum EB-M-16-024, *NWCG Data Management Standards for Incidents Complexes and Merged Wildfires* at: [https://www.nwcg.gov/sites/default/files/memos/eb-m-16-024.pdf](https://www.nwcg.gov/sites/default/files/memos/eb-m-16-024.pdf) for considerations until functionality is updated within the system.

The cost estimate shown in the WFDSS Cost tab will represent estimated final cost for the incident and should be developed based on historic fire costs, estimation spreadsheets, or other sources. If to-date incident expenditures exceed WFDSS estimated fire costs, the final cost estimate must be updated and validated through a periodic assessment or a new decision. For DOI bureaus, to-date agency costs that exceed the decision authority of the Agency Administrator require the publication of a new decision and/or notification as described in the Approval Authorities table. Approval of WFDSS wildfire decisions by Agency Administrators constitutes awareness of estimated final fire costs for the incident.

Decisions in WFDSS are approved and published by the appropriate Line Officer(s) and/or authorized agency administrator(s) for the agency(s).
participating in the decision. Agency administrator authority is defined in the tables below but may be subject to re-delegation or reservation of authority.

As approvers of WFDSS decisions, Agency Administrators will ensure that periodic assessments are completed until the fire is declared out.

### WFDSS Approval Authorities by Agency

<table>
<thead>
<tr>
<th>DOI WFDSS Approval Authorities</th>

¹NPS/FWS/BIA – Cost estimate should be based on estimated final cost of the incident.

²Alaska – Alaska WFDSS decisions require an additional approval from the protecting Agency Fire Management Officer as per the Alaska Statewide Annual Operating Plan. In addition, Alaska WFDSS decisions affecting Alaska Native Claims Settlement Act (ANCSA) Corporation lands and DOI lands not managed by BLM require an additional approval from the Alaska Fire Service (AFS) as the fiscally responsible agent. Fiscal approvals for these wildfires with costs less than $5 million are delegated to AFS Zone Fire Management Officers. Fiscal approvals for these wildfires with costs of $5 million and above are delegated to the Alaska Fire Service Manager.

³FWS Alaska – FWS WFDSS approval authority has been delegated to Refuge Managers for all fires since suppression funding flows through BLM Alaska Fire Service instead of FWS. When an incident meets or exceeds federal combined expenditures of $5 million AND more than 50% of the burned acres are managed by the FWS, the Alaska Fire Service Manager will ensure that written notification is provided to the Regional Chief of Refuges and the Branch of Wildland Fire Chief. When an incident meets or exceeds federal combined expenditures of $10 million AND more than 50% of the burned acres are managed by the FWS, the Alaska Fire Service Manager will ensure that written notification is provided to the FWS National Director, the Regional Chief of Refuges and the Branch of Wildland Fire Chief.

⁴BLM – Approvals may be re-delegated to the Field or National Conservation Lands Manager per agency policy. See Chapter 2 for fire cost notification requirements.
4NPS – Park Superintendents will provide written notification to the regional and/or agency director when an incident meets or exceeds federal combined expenditures of $5 million and/or $10 million in suppression costs, AND more than 50% of the burned acres are managed by the NPS. Written notifications should be emailed with a cc to the Chief, Branch of Wildland Fire.

5FWS/BIA – Regional Directors and National Director may delegate WFDSS approval authority as per agency policy.

*Authority may be retained at the Regional Forester level.*

If internet connections or servers are unavailable, WFDSS documentation will be completed using the “temporary WFDSS paper form” and entered into the web-based application as soon as it becomes available.

**WFDSS Support**

The Wildland Fire Management Research Development and Application (WFM RD&A) group provides the national infrastructure for wildland fire decision making and WFDSS support. Field users should contact their WFDSS Geographic Area Editor for assistance prior to contacting WFM RD&A staff. Information for requesting assistance from WFM RD&A can be found at the WFDSS homepage at [https://wfdss.usgs.gov/](https://wfdss.usgs.gov/).

**Managing the Incident**

**Agency Administrator Definition**

An Agency Administrator is the official responsible for the management of a geographic unit or functional area. Agency Administrators are the managing officer of an agency, division thereof, or jurisdiction having statutory responsibility for incident mitigation and management. Some examples include: NPS Park Superintendent, BIA Agency Superintendent, USFS Forest Supervisor, BLM District Manager, FWS Refuge Manager, State Forester, Tribal Chairperson, Fire Chief, Police Chief.

**Agency Administrator Responsibilities**

The Agency Administrator (AA) manages the land and resources on their organizational unit according to the established land management plan. Fire management is part of that responsibility.

Agency Administrators are responsible for safety oversight, and may request additional safety oversight as needed.
Situations that may require additional safety oversight:

- A fire escapes initial attack or when extended attack is probable;
- There is complex or critical fire behavior;
- There is a complex air operation;
- The fire is in an urban intermix/interface; and
- Other extraordinary circumstances.

The AA establishes specific performance objectives for the Incident Commander (IC) and delegates the authority to the IC to take specific actions to meet those objectives. Agency Administrator responsibilities to an Incident Management Team (IMT) include:

- Conduct an initial briefing to the Incident Management Team (Appendix D).
- Provide an approved WFDSS Decision.
  - FS – Ensure that significant decisions related to strategy and costs are included in WFDSS.
- Complete a Risk and Complexity Assessment (Appendix E and F) to accompany the WFDSS Published Decision.
  - FS – Complete a Risk and Complexity Assessment (RCA) for Type 1, 2, and 3 incidents within WFDSS.
- Coordinate with neighboring agencies on multi-jurisdiction fires to issue a joint Delegation of Authority and develop a single Published Decision in WFDSS for the management of unplanned ignitions.
- Issue a written Delegation of Authority (Appendix G) to the Incident Commander and to other appropriate officials, Agency Administrator Representative, Resource Advisor, and Incident Business Advisor. The delegation should:
  - State specific and measurable objectives, priorities, expectations, Agency Administrator’s intent, constraints, and other required direction;
  - Establish the specific time for transfer of command;
  - Assign clear responsibilities for initial attack;
  - Define your role in the management of the incident;
  - Describe procedures for Conducting during action reviews with the IC;
  - Assign a resource advisor(s) to the IMT;
  - Define public information responsibilities;
  - Address accident investigation procedures and notification requirements for fire managers, line officer(s), and dispatch/coordination centers;
  - Assign a local government liaison to the IMT (if necessary);
  - Assign a local fire management liaison to the IMT (if necessary);
  - Assign an Incident Business Advisor (INBA) to provide incident business management oversight commensurate with complexity; and
  - Direct the IMT to address rehabilitation of areas affected by suppression activities.
• Coordinate mobilization with the Incident Commander:
  ○ Negotiate filling of mobilization order with the IC;
  ○ Establish time and location of Agency Administrator briefing;
  ○ Consider approving support staff additional to the IMT as requested by the IC; and
  ○ Consider authorizing transportation needs as requested by the IC.
• Provide pertinent support materials and documents (L/RMP, FMP, GIS data, local unit SOPs, maps, Service and Supply Plan, etc.) to the IMT.

In situations where one agency provides fire protection under agreement to the jurisdictional agency, both jurisdictional and protecting agencies will be involved in the development of the Delegation of Authorities to the Incident Management Teams and the Published Decision in WFDSS.

Agency Administrator Representative Responsibilities
The Agency Administrator Representative (the on-scene Agency Administrator) is responsible for representing the political, social, and economic issues of the Agency Administrator to the Incident Commander. This is accomplished by participating in the Agency Administrator briefing, in the IMT planning and strategy meetings and in the operational briefings.

Responsibilities include representing the Agency Administrator to the IMT regarding:
• Compliance with the Delegation of Authority and the Published Decision in WFDSS;
• Public Concerns (air quality, road or trail closures, smoke management, threats);
• Public safety (evacuations, access/use restrictions, temporary closures);
• Public information (fire size, resources assigned, threats, concerns, appeals for assistance);
• Socioeconomic, political, or tribal concerns;
• Land and property ownership concerns;
• Interagency and inter-governmental issues;
• Wildland urban interface impacts; and
• Media contacts.

Resource Advisor Responsibilities
The Resource Advisor is responsible for anticipating the impacts of fire operations on natural and cultural resources and for communicating protection requirements for those resources to the Incident Commander. The Resource Advisor should ensure IMT compliance with the Land/Resource Management Plan and Fire Management Plan. The Resource Advisor should provide the Incident Commander with information, analysis, and advice on these areas:
• Rehabilitation requirements and standards;
• Land ownership;
• Hazardous materials;
• Fuel breaks (locations and specifications);
• Water sources and ownership;
• Critical watersheds;
• Critical wildlife habitat;
• Noxious weeds/aquatic invasive species;
• Special status species (threatened, endangered, proposed, sensitive);
• Fisheries;
• Poisonous plants, insects and snakes;
• Mineral resources (oil, gas, mining activities);
• Archeological site, historic trails, paleontological sites;
• Riparian areas;
• Military issues;
• Utility rights-of-way (power, communication sites);
• Native allotments;
• Grazing allotments;
• Recreational areas; and
• Special management areas (wilderness areas, wilderness study areas, recommended wilderness, national monuments, national conservation areas, national historic landmarks, areas of critical environmental concern, research natural areas, wild and scenic rivers).

The Resource Advisor and Agency Administrator Representative positions are generally filled by local unit personnel. These positions may be combined and performed by one individual. Duties are stated in the Resource Advisor Guide for Wildland Fire (NWCG PMS 313, NFES 1831, Aug 2017) Resource Advisor Guide (PMS 313).

Use of Trainees
Use of trainees is encouraged. On wildland fire incidents, trainees may supervise trainees. However, when assigning trainees to positions where critical life-safety decisions are affected, trainees must be directly supervised by a fully qualified individual. For example:
• A Division Group Supervisor (DIVS) trainee may not work directly for an Operations Section Chief without additional field supervision. The potential for high hazard work with high risk outcomes calls for a fully qualified DIVS to be assigned supervision of the DIVS trainee.
• A Supply Unit Leader (SPUL) trainee may supervise a Receiving/Distribution Manager (RCDM) trainee. In this case, supervision may be successfully provided in a lower hazard environment with appropriate risk mitigation.

Incident Action Plan
When a written Incident Action Plan is required, suggested components may include objectives, organization, weather forecast, fire behavior forecast, division assignments, air operations summary, safety message, communications
plan, and incident map. An incident medical plan is required in all written
Incident Action Plans.

Incident Status Reporting
The Incident Status Summary (ICS-209), submitted to the GACC, is used to
report large wildland fires and any other significant events on lands under
federal protection or federal ownership. Lands administered by states and other
federal cooperators may also report in this manner.

Large fires are classified as 100 acres or larger in timber fuel types, 300 acres or
larger in grass fuel types, or when a NIMO, Type 1 or 2 Incident Management
Team is assigned, regardless of the size of the incident or the suppression
management strategy. An ICS-209 should be submitted daily for all uncontained
full suppression wildfires that meet large fire criteria. An ICS-209 should be
submitted weekly (Thursday evening), for all wildfires meeting large fire criteria
that are being managed under strategies that are less than full suppression. The
Agency Administrator may require additional reporting times. Refer to local,
zone and/or GACC guidance for additional reporting requirements.

Incident History and Financial Records
Wildfire incidents on federal lands managed by the FS and DOI (except BIA)
require creation of an Incident History File (IHF) to document significant
events, actions taken, lessons learned and other information with long-term
value for managing natural resources. IHF contents and instructions, and tools
for creating the IHF are found at
The host unit will be responsible for retaining the incident documentation
package including the IHF and financial records.

Document and Computer Security
Precautions must be taken to secure incident information in its various formats.
All forms of information shall be treated as Controlled Unclassified Information
(CUI) and care must be exercised when handling the data to prevent the
inadvertent viewing or unauthorized disclosure of information. CUI paper copies
that compromise privacy and security shall be shredded before disposal when no
longer needed. All computers used at the incident must be patched and have
anti-virus software installed with recently updated definition files. All media
used to transfer information into the incident (for example, but not limited to,
USB flash drives, portable hard drives and CD/DVDs) must be scanned prior to
use. Autorun capabilities must be disabled to prevent the spread of malware. All
computers and storage devices shall be physically secured at all times.

Transfer of Command
The following guidelines will assist in the transfer of incident command
responsibilities from the local unit to incoming Incident Management Team and
back to the local unit.
• The local team or organization already in place remains in charge until the local representative briefs their counterparts on the incoming team, a Delegation of Authority has been signed, and a mutually agreed time for transfer of command has been established.
• The ordering unit will specify times of arrival and transfer of command, and discuss these timeframes with both the incoming and outgoing command structures.
• Clear lines of authority must be maintained in order to minimize confusion and maintain operational control.
• Transfers of command should occur at the beginning of an operational period, whenever possible.
• All operational personnel will be notified on incident command frequencies when transfer of command occurs.

Release of Incident Management Teams
The release of an IMT should follow an approved transfer of command process. The Agency Administrator must approve the date and time of the transfer of command. The Transfer of Command Plan should include the following elements:
• Remaining organizational needs and structure;
• Tasks or work to be accomplished;
• Communication systems and radio frequencies;
• Local safety hazards and considerations;
• Incident Action Plan, including remaining resources and weather forecast;
• Facilities, equipment, and supply status;
• Arrangement for feeding remaining personnel;
• Financial and payment processes needing follow-up; and
• Risk and Complexity Assessment.

Team Evaluation
At completion of assignment, Incident Commanders will receive a written performance evaluation from the Agency Administrator(s) prior to the teams’ release from the incident. Certain elements of this evaluation may not be able to be completed at the closeout review. These include accountability and property control, completeness of claims investigation/documentation, and completeness of financial and payment documentation.

The final evaluation incorporating all of the above elements should be sent to the Incident Commander and the respective GACC within 60 days. See Appendix I for the IMT evaluation form.

The Delegation of Authority, the Published Decision in WFDSS, and other documented Agency Administrator’s direction will serve as the primary standards against which the IMT is evaluated.

The Agency Administrator will provide a copy of the evaluation to the IC and the state/regional FMO, and retain a copy for the final fire package.
The state/regional FMO will review all evaluations and will be responsible for providing a copy of evaluations documenting performance to the Geographic Area Coordinating Group or agency managing the IMT.

**Unit/Area Closures**

Threats to public safety may require temporary closure of a unit/area or a portion of it. When a fire threatens escape from the unit/area, adjacent authorities must be given as much advance notice as possible in order to achieve orderly evacuation.

**Incident Emergency Management Planning and Services**

Refer to Chapter 7 for further guidance.

**Fire Management in Wilderness**

Actions taken in wilderness will be conducted to protect life and safety, to meet natural and cultural resource objectives, and to minimize negative impacts of the fire management actions and the fires themselves. In evaluating fire management actions, the potential degradation preservation of wilderness character will be considered before, and given significantly more weight than, economic efficiency and convenience. Unless human life or private property is immediately threatened, only those actions that preserve wilderness character and/or have localized, short-term adverse impacts to wilderness character will be acceptable. Any Delegation of Authority to Incident Management Teams will convey appropriate emphasis on the protection preservation of wilderness character and resources and will ensure interaction with local wilderness resource advisors.

- **BLM** – BLM Manual 6340—Management of BLM Wilderness (2012), Section 1.6.C.7 states that to the greatest extent possible, the Bureau will manage all wildfires in wilderness: 1) using Minimum Impact Suppression Tactics (MIST) wherever possible; 2) if feasible, without equipment that would ordinarily be prohibited under Section 4(c) of the Wilderness Act; and 3) by assigning a Resource Advisor (READ) with expertise in wilderness stewardship. To assist in documenting any decision involving uses generally prohibited by the Wilderness Act (e.g., heavy equipment, chainsaws, and the landing of aircraft, among other examples), the BLM normally uses a tool known as the Minimum Requirements Decision Guide (MRDG). Under the Wilderness Act, however, control of fire is an exception to the prohibited uses, so the MRDG is not necessary at the time of response to an emergency. Nevertheless, the minimum requirements concept should be incorporated into emergency planning so that the minimum necessary methods and tools can be used to resolve emergencies while preserving wilderness character to the greatest extent practicable. Responses involving prohibited uses will be approved by the State Director, though approval can be delegated through the BLM MS-1203 –
DELEGATION OF AUTHORITY to the District or Field Office Manager if he/she has been through the National or Regional Wilderness Stewardship Training offered by the Arthur Carhart National Wilderness Training Center. In emergency situations, the decision on authorization of normally prohibited uses should always err on the side of protecting human life.

- **NPS** – For all wilderness fire management actions proposing the use of any of the Wilderness Act Section 4(c) prohibitions, a minimum requirements analysis (MRA) will be completed. To ensure adequate consideration of wilderness resources, a programmatic MRA must be completed as part of the development of a park’s FMP and companion environmental compliance document.

- **BLM/NPS/FWS** – For all wilderness fire management actions proposing the use of any of the Wilderness Act 4(c) prohibitions, a minimum requirements analysis will be completed.

- **FS** – For all wilderness fire management actions proposing the use of any Wilderness Act 4(c) prohibitions, a minimum requirements analysis is recommended.

- *****BLM/NPS/FWS/FS** – Section 4(d)(1) of the Wilderness Act of 1964 allows all agencies to control fire, in wilderness areas, subject to such conditions as the Secretary deems desirable.

- **BIA** – For all wilderness fire management actions refer to the Land and Resource Management Plans.

### Operational Guidelines for Aquatic Invasive Species

In order to prevent the spread of aquatic invasive species, it is important that fire personnel recognize how our fire operations can prevent the transport of these species. The NWCG Invasive Species Subcommittee provides up-to-date operational guidelines, best management practices, and equipment cleaning guidance to minimize the spread of aquatic invasive species. Consult the NWCG website (https://www.nwcg.gov/committees/invasive-species-subcommittee) to obtain these protocols. Local area or agency guidelines may also be available and useful and local biologists, Resource Advisors (READ) and fire personnel should consult with each other during the pre-season regarding known aquatic invasive species locations to facilitate incident avoidance when possible. To minimize potential transmission of aquatic invasive species, it is recommended that you:

- Consult with local biologists, Resource Advisors (READ) and fire personnel for known aquatic invasive species locations in the area and avoid them when possible.
- Avoid entering (driving through) water bodies or wet areas when possible.
- Avoid transferring water between drainages or between unconnected waters within the same drainage when possible.
- Avoid sucking organic and bottom material into water intakes when drafting from a natural water body.
- Avoid obtaining water from multiple sources during a single operational period when possible.
- Remove all plant parts and mud from external surfaces of gear and equipment after an operational period.
- If gear contacts untreated water, consider decontaminating before moving to new drainages. Applicable gear includes helicopter buckets, snorkel ends, foot valves, and draft hoses. Water delivery equipment and accessories (e.g., fireline hoses, wye valves, nozzles) that do not transfer tank water to waterbodies do not need to be disinfected.
- For decontamination and cleaning protocols, refer to NWCG Invasive Species Subcommittee guidance (https://www.nwcg.gov/committees/invasive-species-subcommittee) or local area or agency direction. NWCG protocols emphasize hot water power washing or drying over use of chemicals.
- Carry spare, clean, dry helicopter buckets, draft hoses, and foot valves to switch out with used ones when moving to a new water source. Decontaminate the wet gear while spares are being used.
- Prime engine pumps with water from the drafting source (e.g., streams, lake) rather than using water from the engine tank. This minimizes the leakage of possibly contaminated engine tank water through the foot valve. Ensure foot valves are operating and not leaking. Decontamination of engine or water tender tanks with hot water or chemicals is not recommended.

**Operational Guidelines for Invasive Species**

Suppression and support vehicles, tools, and machinery should be cleaned at a designated area prior to arriving and leaving the incident. Onsite fire equipment should be thoroughly cleaned including the undercarriage, fender wells, tires, radiator, and exterior of the vehicle. Firefighter personnel should clean personal equipment, boots, clothing, etc., of weed or other invasive species materials, including visible plant parts, soil, and other materials as identified by the resource advisor. The cleaning area should also be clearly marked to identify the area for post-fire control treatments, as needed.

Ensure that seed mixes and mulch used in suppression repair contain no federally or state designated noxious weeds by using seed mixes and mulches that have been examined by a laboratory or have current weed free certification from a state seed laboratory or equivalent qualified testing agent.

**Responding to Non-Wildland Fire Incidents**

Managers will avoid giving the appearance that their wildland fire resources are trained and equipped to perform structure, vehicle, and dump fire suppression, to respond to hazardous materials releases, or to perform emergency medical response for the public.
Wildland Urban Interface

The operational roles of the federal agencies as partners in the wildland urban interface are wildfire suppression, structure protection (see below), prescribed fire, hazard reduction, cooperative prevention and education, and technical assistance. Structural fire suppression is the responsibility of tribal, state, or local governments. Federal agencies may assist with exterior structural fire protection activities under formal fire protection agreements that specify the mutual responsibilities of the partners, including funding (some federal agencies have full structural protection authority for their facilities on lands they administer and may also enter into formal agreements to assist state and local governments with structural protection).

Funding is not provided to prepare for or respond to emergency non-wildland fire response activities such as structure fires, vehicle fires, dump fires, hazardous materials releases, and emergency medical responses. Managers must ensure that fire management plans, interagency agreements, and annual operating plans clearly state agency and cooperator roles and responsibilities for non-wildland fire response activities that agency personnel are exposed to as a result of working in the interagency fire environment. Managers will also ensure that federal wildland fire resources are not identified on run cards or in dispatch plans for non-wildland fire responses.

Structure, Vehicle, Dumpster, Trash, and Landfill Fires

Wildland firefighters will not take direct suppression action on structure, vehicle, dumpster, trash, or landfill fires. Structure, vehicle, and landfill fire suppression is not a functional responsibility of wildland fire resources. These fires have the potential to emit high levels of toxic gases. This policy will be reflected in suppression response plans.

Wildland firefighters who encounter structure, vehicle, or landfill fires, or who are dispatched to such fires due to significant threat to adjacent agency protected lands/resources, will not engage in direct suppression action. Structure protection (not suppression) activities will be limited to exterior efforts, and only when such actions can be accomplished safely and in accordance with established wildland fire operations standards.

- **NPS** – For structural fire (including vehicle, trash and dumpster fires) response, training, medical examination, and physical fitness requirements, and hazardous material response or control guidance, refer to Chapter 3.
- **FS** – Wildfires other than vegetation (such as dumpster, trash, landfill, or vehicle) as the primary fuel present hazards that are outside of the basic wildland firefighters training and protective equipment. Response actions will be limited to protection of life, property, and resources when they can be safely undertaken with proper risk assessment and mitigation. When agency employees are trained, qualified, and equipped to take action on
other than vegetation fires, they may do so with proper risk assessment and mitigation (Incident Response Pocket Guide, PMS 461).

Public Emergency Medical Response
Public emergency medical response is not a functional responsibility of wildland fire resources, and should not be part of a preplanned response that requires these duties. When wildland firefighters encounter emergency medical response situations, their efforts should be limited to immediate care (e.g., first aid, first responder) actions that they are trained and qualified to perform.

- NPS – NPS employees who provide emergency medical services will adhere to the requirements contained in Director’s Order and Reference Manual #51, Emergency Medical Services.

Post-Wildfire Activities
Each wildland fire management agency is responsible for taking prompt action to determine the need for, and to prescribe and implement, emergency treatments to minimize threats to life or property or to stabilize and prevent unacceptable degradation to natural and cultural resources resulting from the effects of a fire on the lands they manage.

Damages resulting from wildfires are addressed through four activities:
- Suppression Repair – Planned actions taken to repair the damages to resources, lands, and facilities resulting from wildfire suppression actions and documented in the Incident Action Plan. These actions are usually implemented prior to, or immediately after containment of the wildfire by the incident management organization. Repairs under this activity may be completed to return the value to pre-wildfire management activity condition as practical but may not improve the condition beyond what was existing prior to the incident.
- Emergency Stabilization – Planned actions to stabilize and prevent unacceptable degradation to natural and cultural resources, to minimize threats to life or property resulting from the effects of a wildfire, or to repair/replace/construct physical improvements necessary to prevent degradation of land or resources. Emergency stabilization actions must be taken within one year plus twenty-one days after the ignition date of a wildfire and documented in a Burned Area Emergency Response Plan or an agency specific plan. Within the Department of Interior, the Bureau Director may approve an extension beyond the one-year plus twenty-one
days to accommodate circumstances related to climatic conditions or other
significant events.
• Rehabilitation – Efforts taken within five years following 21 days after the
ignition date of a wildfire to repair or improve wildfire-damaged lands
unlikely to recover naturally to management approved conditions, or to
repair or replace minor assets damaged by wildfire. These efforts are
documented in:
  o DOI – a separate Burned Area Rehabilitation Plan (BAR) or in
    combination with Burned Area Emergency Response Plan (BAER).
  o FS – a Burned Area Emergency Response Plan (BAER).
• Restoration – Continuing the rehabilitation beyond the initial five years or
the repair or replacement of major assets damaged by the wildfire.

Burned Area Emergency Response (BAER) Teams

BAER Teams are a standing or ad hoc group of technical specialists (e.g., hydrologists, biologists, soil scientists, etc.) that develop and may implement portions of the Burned Area Emergency Response Plans. They will meet the requirements for unescorted personnel found in Chapter 7 under “Visitors to the Fireline” when working within the perimeter of an uncontrolled wildfire. The team’s skills and size should be commensurate with the size and complexity of the wildfire.

It is the Agency Administrator’s responsibility to designate an interdisciplinary BAER team. However, BAER teams must coordinate closely with IC and Incident Management teams to work safely and efficiently. The Agency Administrator is responsible for submitting the Emergency Stabilization BAER plan to the Regional Office for review and approval within the timeframes established by each Agency. Coordination should occur with the Regional BAER Coordinator. If needed, extensions can be negotiated with those having the appropriate level of approval authority.

- **DOI** – The Department of Interior maintains one National BAER Team to assist field units in planning for complex post-fire emergency stabilization. The National BAER Team is scalable in long and short configurations. It
may be ordered as command and general staff, or ordered as individual
resources. The full National BAER Team is dispatched to more difficult
incidents involving extreme risks to human life and critical federal assets.
Potential floods, mud and debris flows, watershed/municipal water
supplies, urban interface, and complex and multiple jurisdictions are the
dispatch prioritization criteria issues factored into the mobilization
decision. Less complex incidents will use local, regional, interagency, and
contracted ad hoc BAER teams that may be supplemented with National
BAER Team personnel. Bureau coordinators maintain rosters of BAER
personnel for less complex incidents.

- **DOI** – The DOI-BAER Teams should be requested at least 10 days prior to
  expected date of wildfire containment and ordered as per the National
  Interagency Mobilization Guide.

- **FS** – Each Forest Service unit identifies a core BAER team prior to fire
  season. Regional coordinators maintain rosters of experienced BAER
  personnel in the Region. When needed, specific BAER personnel
  representing needed specialties from other units can either be contacted
directly or through dispatch. See FSM 2523 and FSH 2509.13 for agency-
specific policy and direction for BAER teams.

### Interagency Final Fire Reports and Datasets

The Final Fire Report, also referred to as the Individual Fire Report, serves as
the official record for a wildfire occurrence and its related outcomes. While
there are other types of fire reports, including the ICS-209 and other situational
(e.g. daily) and ad-hoc reports, datasets compiled from individual Final Fire
Reports provide the official statistics for every agency and the interagency
wildland fire management organization as a whole. These datasets also provide
vital information regarding the frequency, location, and size of historical fires,
which are used for decision support, budget formulation, occurrence modeling,
research analysis, and other planning applications. For these reasons, it is
important for Final Fire Reports to be completed promptly and accurately once a
wildfire is declared “out” and its outcomes are known. To ensure that the
wildfire occurrence and workload is fully represented, every wildfire, regardless
of size, should be documented with a Final Fire Report.

The Interagency Fire Occurrence Reporting Modules (InFORM) is a suite of
applications used by multiple fire management agencies for Final Fire
Reporting. By replacing multiple agency-specific fire reporting applications,
InFORM strives to fulfill the goal of having “one fire, one report, one
authoritative data source”. Starting in Calendar Year 2020, a single
corresponding record must exist in the InFORM dataset for any wildfire that
originates on or otherwise burns onto federally-owned or protected lands.
Because the federal wildland fire management agencies use IRWIN-integrated
Computer Aided Dispatch (CAD) applications and issue FireCodes for wildfires,
most records will be automatically established in InFORM, where they will be
available for review, editing, and certifying once the fire is declared “out” and reporting ceases in other applications.

• The federal wildland fire management agency with jurisdiction at a fire’s point of origin is responsible for ensuring that the fire is reported and certified in InFORM; however, this responsibility can be conveyed to another agency via agreement. Certification is a process in InFORM whereby the Final Fire Report is declared complete and suitable for use in official statistics.

○ **BLM/NPS/USFS/BIA/BOR** – Final Fire Reports for wildfires that originate on agency lands, or lands formally protected by these agencies, shall be certified in InFORM.

○ **FWS** – For wildfires that originate on FWS lands, or lands formally protected by FWS, Final Fire Reports shall be submitted via the Fire Management Information System (FMIS), as noted in Chapter 4.

○ **Other agencies** – Several state agencies and certain other federal agencies, such as those under Department of Defense, have lands where wildfires occur, but do not use InFORM for fire reporting.

• For a fire that originates on land that is under the jurisdiction of an agency that does not use InFORM, but subsequently burns onto lands owned or protected by one or more federal agency that does use InFORM for reporting, any one of these affected federal agencies shall ensure that the fire is reported and certified in InFORM.

For more information about Interagency Fire Reporting and InFORM, go to https://www.nwcg.gov/committees/fire-reporting-subcommittee.

**Incident Business Management**

Specific incident business management guidance is contained in the *NWCG Standards for Interagency Incident Business Management* (PMS 902). This handbook assists participating agencies of the NWCG to constructively work together to provide effective execution of each agency’s incident management program by establishing procedures for:

• Uniform application of regulations on the use of human resources, including classification, payroll, commissary, injury compensation, and travel;

• Acquisition of necessary equipment and supplies from appropriate sources in accordance with applicable procurement regulations;

• Managing and tracking government property;

• Financial coordination with the protection agency and maintenance of finance, property, procurement, and personnel records and forms;

• Use and coordination of incident business management functions as they relate to sharing of resources among federal, state, and local agencies, including the military;

• Investigation and reporting of accidents;

• Investigating, documenting, and reporting claims;

• Documenting costs and implementing cost-effective criteria for managing incident resources; and
CHAPTER 11 INCIDENT MANAGEMENT AND RESPONSE

• Non-fire incidents administrative processes.
  ○ DOI – The Department of the Interior All Hazards-Supplement to the NWCG Standards for Interagency Incident Business Management establishes business management guidelines for the Department of the Interior’s (DOI’s) all-hazards incidents. The DOI Supplement is available at https://www.doi.gov/emergency/emergency-policy.cfm.

Cost Management
An Incident Business Advisor (INBA) must be assigned to any wildfire with costs of $5 million or more. If a qualified INBA is not available, the approving official will appoint a financial advisor to monitor expenditures.

Incident cost objectives will be included as a performance measure in Incident Management Team evaluations.

Large Fire Cost Review (FS)
See Chapter 18.

Significant Wildland Fire Review (DOI)
See Chapter 18.

Cache Management
Agencies often serve as interagency partners in national support caches and local area support caches, and may operate single agency initial attack caches. All caches will maintain established stocking levels, receive and process orders from participating agencies and follow ordering and fire replenishment procedures as outlined by the national and geographic area cache management plans and mobilization guides.

• FS – Refer to FSM 5160 for specific requirements.

Type 1 and 2 National Interagency Support Caches
There are fifteen National Interagency Support Caches (NISCs); eleven are managed by the Forest Service, three are managed by the BLM, and one is managed by the State of Idaho. The fifteen national caches are part of the National Fire Equipment System (NFES). Each of these caches provides incident support in the form of equipment and supplies to units within their respective geographic areas. The NFES cache system may support other emergency, disaster, fire-related or land management activities, provided that such support is permitted by agency policies and does not adversely affect the primary mission. These national caches do not provide supplies and equipment to restock local caches for non-incident requests. Non-emergency (routine) orders should be directed to the source of supply; e.g., DLA or private vendors.

Forest Service National Symbols Program distribution is through the Eastern Area Incident Support Cache (NEK). This material is coordinated by the USDA Forest Service, under advisement of the National Association of State Foresters’ (NASF) Cooperative Forest Fire Prevention Committee (CFFP). Materials include Smokey Bear /Junior Forest Ranger prevention items and Woodsy Owl environmental educational materials.

NEK also distributes DOI Fire Education materials. The website at https://www.symbols.gov/ contains the catalog of these materials, information about these programs, and online ordering instructions.

**Type 3 Support Caches**
These caches directly support more than one agency and generally cover more than one administrative unit. They will maintain stocking levels to meet the identified needs of the multiple agencies for whom service is provided.

**Type 4 Local Caches**
Numerous caches of this level are maintained by each agency. These caches will establish and maintain stocking levels to meet the initial response needs of the local unit(s).

**Inventory Management**

**System Implementation**
Each fire cache, regardless of size, should initiate and maintain a cache inventory management system. Agency management systems provide a check out/return concept that incorporates a debit/crediting for all items leaving the cache. This system is strictly followed in the Type 1 and 2 NISC’s. Inventory management processes should be implemented for all Type 3 Support and Type 4 Local caches.

**Accountability**
Fire loss/use rate is defined as all property and supplies lost, damaged, or consumed on an incident. It is reported as a percentage that is calculated in dollars of items issued compared to items returned. Consumable items are not included in this total. All items stocked in agency fire caches will be categorized for return (loss tolerance/use rate) and accountability purposes.

**Trackable Items**
Trackable items include items that a cache may track due to dollar value, sensitive property classification, or limited quantities. Available items that are considered trackable are usually engraved or tagged with a cache trackable identification number. These items must be returned to the issuing cache at the end of the incident use, or documentation must be provided to the issuing cache as to why it was not returned. All trackable items are also considered durable. Accountability for trackable items is expected to be 100 percent.
CHAPTER 11 INCIDENT MANAGEMENT AND RESPONSE

Durable Items
Durable items include cache items considered to have a useful life expectancy greater than one incident. High percentages of return for these items are expected. These items are not specifically cache identified/tagged/engraved. Durable items include water handling accessories, helicopter accessories, tents and camp items such as heaters, lights, lanterns, tables, chairs, hose, tools, backpack pumps, sleeping bags, pads, cots, and personal protective equipment. A 90% level of return is the expected threshold for durable items.

Consumable Items
Consumable items include items normally expected to be consumed during incident use. Consumable items returned in unused condition are credited to the incident. Examples of consumable items are: batteries, plastic canteens, cubitainers, forms, MREs, fusees, hot food containers, petroleum products, and medical supplies.

Incident Management and Environmental Sustainability
Every incident should seek opportunities to reduce unnecessary waste and limit impacts associated with management actions. This may be accomplished, for example, by promoting recycling and encouraging the use of alternative energy sources as long as such efforts do not compromise operational or safety objectives.

Incident-to-Incident Transfer of Supplies and Equipment
Transfer of supplies and equipment between incidents is not encouraged, due to the increased possibility of accountability errors. In instances when it is determined to be economically feasible and operationally advantageous, the following must be accomplished by the Supply Unit Leader from the incident that is releasing the items.

Documentation will be completed on the Interagency Incident Waybill (NFES 1472) and must include the following:

• NFES Number.
• Quantity.
• Unit of Issue.
• Description.
• Trackable ID number, if item is trackable.
• Receiving incident name, incident number, and resource request number.
• The Supply Unit Leader will send the waybill transfer information to the servicing NISC to maintain proper accountability recording.

Upon request, the servicing NISC can provide the Supply Unit Leader with an Outstanding Items Report or Incident Summary Report to facilitate accurate waybill documentation.

Fire Loss Tolerance Reporting for Type 1 and 2 Incidents
In order to help managers keep incident-related equipment and supply loss to a minimum, incident management teams (IMTs) are required to maintain accountability and tracking of these items. Guidelines and procedures to assist with this accountability are provided in Chapter 30 of the *NWCG Standards for Interagency Incident Business Management*. To further facilitate these procedures and provide oversight, a fire loss report has been developed that provides detailed information regarding used and trackable item use. This report has been accepted by NWCG for all wildland fire agencies and will be compiled for all Type 1 and Type 2 incidents. Investigations may be conducted in those cases where thresholds may have been exceeded.

These reports are compiled by the NISC servicing the particular incident. Reports will then be forwarded to the responsible local office, with a copy to the state/regional FMO. The following steps must be followed to insure accurate reports:

- At the close of each incident, all property must be returned to the servicing NFES cache;
- If accountable/trackable property has been destroyed or lost, appropriate documentation must be provided to the cache for replacement and updating property records;
- All property purchased with emergency fire funds for an incident must be returned to the NFES cache system;
- All unused consumable and/or durable NFES items must be returned to the servicing NFES cache within 30 days of control of the incident; and
- Agency Administrators/fire management officers must review the fire loss report and recommend appropriate follow-up action if losses are excessive. Those actions and recommendations should be documented and filed in the final incident records.

**Incident Supply and Equipment Return Procedures**

Supplies and equipment ordered with suppression funds will be returned to the ordering unit at the close of the incident and dispersed in one of three ways:

- Items meeting NFES standards will be returned to the NISC for reuse within the fire supply system;
- Items not meeting the prescribed NFES standards will be purchased with program funds by the local unit if the items are needed for program use; or
- Items will be delivered to the unit’s excess property program for disposal.

**Cache Returns and Restock Procedures**

All returns for credit and restock of caches to specific incident charges should be made within 30 days after the close of the incident. If that timeframe cannot be met, it is required that returns and restock be made during the same calendar year as items were issued. All returns should be tagged with appropriate incident number, accompanied by an interagency waybill identifying the appropriate incident number, or accompanied by issue documents to ensure proper account credit is given. Any items returned after the calendar year of issue will be
returned to multiple-fire charges, unless specific incident charge documentation (issues) can be provided with the return.

**Incident Replacement of Government Property**

Refer to the *NWCG Standards for Interagency Incident Business Management*, Chapter 30 for procedures governing property management relating to incident activities. The Agency Administrator is responsible for providing agency property management guidelines and/or procedures to incident personnel.

Damage or Loss for assigned property is addressed under *NWCG Standards for Interagency Incident Business Management*, Chapter 30. Specialty or non-cache items originally provided by the home unit through the use of preparedness funds will be replaced by home unit funds if the loss is due to normal wear and tear. If the government property is damaged on the incident due to a specific event, e.g., wind event damages tent, the incident may, upon receipt of required documentation and proof of damage, authorize replacement using the *Incident Replacement Requisition (OF-315)*. Cache items will be replaced at the incident if available. Cache items that are not available at the incident may be authorized for restocking at the home unit via an authorized *Incident Replacement Requisition*.

For replacement of NFES items not carried by the National Incident Supply Cache responsible for supporting the incident (i.e., Wildland Firefighter’s Pants, Type II), replacement must be authorized using the *Incident Replacement Requisition (OF-315)*, and should be accomplished by ordering the item from Defense Logistics Agency (DLA).
Chapter 12
Suppression Chemicals and Delivery Systems

Policy for Use of Fire Chemicals

Use only products qualified and approved for intended use. Follow safe handling procedures, use personal protective equipment recommended on the product label and Safety Data Sheet (SDS).

A current list of qualified products and approved uses can be found on the Wildland Fire Chemical Systems (WFCS) website at https://www.fs.fed.us/rm/fire/wfcs/index.htm.

Refer to local jurisdictional policy and guidance related to use of wildland fire chemicals for protection of historic structures.

Products must be blended or mixed at the proper ratio prior to being loaded into aircraft. Quality control and safety requirements dictate that mixing or blending of wildland fire chemicals be accomplished by approved methods.

### The use of fire chemicals mixed with on board fire chemical injection systems or blending systems are not permitted to be used on federally-contracted aircraft or on federal lands. This also includes cooperator aircraft operating on fires on federal lands.

Types of Fire Chemicals

Long-Term Retardant

Long-term retardants contain fertilizer salts that change the way fuels burn. They are effective even after the water has evaporated. Retardants may be applied aerially by large airtanker, single engine airtanker (SEAT) and helicopter bucket. Some retardant products are approved for fixed tank helicopters. Some products are formulated specifically for delivery from ground sources. See the Qualified Products List (QPL) for specific uses for each product at https://www.fs.fed.us/rm/fire/wfcs/index.htm.

Recommended coverage levels and guidelines for use can be found in the 10 Principles of Retardant Application, NFES 2048, PMS 440-2 pocket card IRPG (PMS 461). Retardant mixing, blending, testing, and sampling requirements can be found at the WFCS website Lot Acceptance and Quality Assurance page https://www.fs.fed.us/rm/fire/wfcs/laqa.htm.

Fire Suppressant Foam

Fire suppressant foams are combinations of wetting and foaming agents added to water to improve the effectiveness of the water. They are no longer effective once the water has evaporated. Foam may be applied by engines and portable pumps. Aerial application of foam is no longer approved on Federal Jurisdictional Lands. See the QPL for specific uses for each product.
CHAPTER 12  SUPPRESSION CHEMICALS AND DELIVERY SYSTEMS

Wet Water

Using foam concentrates at a mix ratio of 0.1 percent will produce a wet water solution.

Water Enhancer (Gel)

Water enhancers, such as firefighting gels, are added to water to improve the viscosity and adhesion of water. They are not effective once the water has evaporated. These products may be used in structure protection within the wildland interface or on wildland fuels. They are fully approved for use in helicopter bucket and engine application. Many are also approved, at specific mix ratios, for use in SEATs, and fixed tank helicopters. See the QPL for specific uses for each product.

Water enhancers, including firefighting gels and elastomers, are added to water to improve drop characteristics and adhesion of water to fuel. They are not effective once the water has evaporated. These products may be used in structure protection within the wildland interface or on wildland fuels. Mixing water enhancers outside of their qualified mix ratios is not acceptable. They are fully approved for use in helicopter buckets and engine application. Some products are approved for use in SEATs and fixed-tank helicopters at specific mix ratios. See the QPL for specific uses for each product.

The use of water enhancers mixed with on-board injection systems are not allowed on federal lands or on federally-contracted aircraft. The use of water enhancers mixed through a proportioner and loaded from ground-based equipment is acceptable according to their qualified applications as specified on the QPL.

Safety Information

Personnel Safety

All qualified wildland fire chemicals meet minimum requirements (June 2007) (Forest Service Specifications 5100-304, 5100-306, 5100-307) in regard to aquatic and mammalian toxicity (acute oral toxicity, acute dermal toxicity, primary skin irritation, and primary eye irritation). Specifications for long-term retardants, fire suppression foams, and water enhancers can be found on the WFCS website.

Personnel involved in handling, mixing, and applying fire chemicals or solutions shall be trained in proper procedures to protect their health and safety and the environment. Approved fire chemicals can be irritating to the eyes. Personnel must follow the manufacturer’s recommendations; including use of PPE, as found on the product label and product SDS. The SDSs for all approved fire chemicals can be found on the website https://www.fs.fed.us/rm/fire/wfcs/msds.htm.

Human health risk from accidental drench with fire chemicals can be mitigated by washing with water to remove any residue from exposed skin.
Containers of any fire chemical, including backpack pumps and engine tanks, should be labeled to alert personnel that they do not contain only water and the contents are not potable.

Slippery footing is a hazard at storage areas, unloading and mixing sites, and wherever applied. Because all fire chemical concentrates and solutions contribute to slippery conditions, all spills must be cleaned up immediately, preferably with a dry absorbent pad or granules. Firefighters should be aware that fire chemicals can conceal ground hazards. Wildland fire chemicals can penetrate and deteriorate leather boots, resulting in wet feet and potentially ruined leather.

Aerial Application Safety

Personnel and equipment in the flight path of intended aerial drops should move to a location that will decrease the possibility of being hit with a drop.

Personnel near aerial drops should be alert for objects (tree limbs, rocks, etc.) that the drop could dislodge. The Incident Response Pocket Guide (IRPG) provides additional safety information for personnel in drop areas.

During training or briefings, inform all fire personnel of environmental guidelines and requirements for fire chemicals application and avoid contact with waterways.

Avoid dipping from rivers or lakes with a helicopter bucket containing residual fire chemicals without first cleaning/washing down the bucket.

Consider setting up an adjacent reload site and manage the fire chemicals in portable tanks or terminate the use of chemicals for that application.

Interagency Policy for Aerial and Ground Delivery of Wildland Fire Chemicals Near Waterways and Other Avoidance Areas

This policy is an expansion and update for the 2000 and 2009 updated Guidelines for Aerial Delivery of all wildland fire chemicals, including retardant, foam, and water enhancers, which were established and approved by the Forest Service (FS) and the Department of the Interior (DOI). The policy includes additional avoidance areas (both aquatic and terrestrial) for aerial delivery of fire chemicals as designated by individual agencies and includes additional FS reporting requirements.

This policy does not require the helicopter or airtanker pilot-in-command to fly in such a way as to endanger his or her aircraft, other aircraft, or structures or compromise ground personnel safety.
Aerial Delivery Policy | Ground Delivery Policy
--- | ---
• Avoid aerial application of all wildland fire chemicals within 300 feet (ft.) of waterways.
• Additional mapped avoidance areas may be designated by individual agency.
• Whenever practical, as determined by the fire incident commander, use water or other less toxic wildland fire chemical suppressants for direct attack or less toxic approved fire retardants in areas occupied by threatened, endangered, proposed, candidate or sensitive species (TEPCS) or their designated critical habitats.
• Avoid application of all wildland fire chemicals into waterways.

1 Delivery on the ground provides for more precise delivery of fire chemicals to target areas. Thus, delivery is allowed within the aquatic mapped avoidance areas provided chemicals do not reach the waterway. Because there is the potential for TEPCS, their designated critical habitats, or other resources such as cultural or heritage areas to occur in waterway buffers or additional mapped avoidance areas, it is advised that a resource advisor be consulted prior to application to determine best action or the potential for environmental effects. See reporting section below for requirements.

**Definition of Waterway**
Any body of water (including lakes, rivers, streams, and ponds) whether or not it contains aquatic life.

**Definition of Waterway Buffer**
300 ft. distance on either side of a waterway.

**Definition of Additional Mapped Avoidance Areas**
On FS lands, there may be areas requiring additional protection outside of the 300-foot waterway buffer. This may include certain dry intermittent or ephemeral streams, areas designated for resource protection, as well as areas for the protection of TEPCS terrestrial habitats and population areas.

• FS – Maps are available at https://www.fs.fed.us/fire/retardant/index.html.

**Guidance for Pilots**
Pilots will avoid all waterways and additional mapped avoidance areas designated by individual agencies. To meet the 300-foot waterway buffer zone or additional mapped avoidance areas guideline, implement the following:
• All Aircraft: When approaching a waterway or other avoidance areas, the pilot shall terminate application of wildland fire chemical approximately 300 feet before reaching the area. When flying over a waterway, the pilot shall not begin application of wildland fire chemical until 300 feet after crossing the far bank or shore. The pilot shall make adjustments for airspeed and ambient conditions such as wind to avoid the application of wildland fire chemicals within the 300-foot buffer zone. Riparian vegetation may be an indicator of waterways and pilots should confirm to the extent possible that no water is present before dropping.
• Prior to fire retardant application, all aerial supervision and/or pilots shall be briefed on the locations of all TEPCS or other avoidance areas in the vicinity.
• If operationally feasible, pilots or the aerial supervision shall make a ‘dry run’ over the intended application area and/or coordinate with ground resources to identify avoidance areas and waterways in the vicinity of the wildland fire.
• Pilots will be provided avoidance area maps and information at all briefings (if not dispatched from one geographic area/unit and delivering to another geographic area).

Exceptions for Aerial Delivery of Long-Term Retardant on USDA Forest Service Lands (2011 Record of Decision)
• Deviations from the policy are allowed only for the protection of life or safety (public and firefighter).

Exceptions for All Other Agencies and All Other Fire Chemicals
• When alternative line construction tactics are not available due to terrain constraints, congested area, life and property concerns or lack of ground personnel, it is acceptable to anchor the wildland fire chemical application to the waterway. When anchoring a wildland fire chemical line to a waterway, use the most accurate method of delivery in order to minimize placement of wildland fire chemical in the waterway (e.g., a helicopter rather than a heavy airtanker).
• Deviations from the policy are acceptable when life or property is threatened and the use of wildland fire chemical can be reasonably expected to alleviate the threat.
• When potential damage to natural resources outweighs possible loss of aquatic life, the unit administrator may approve a deviation from these guidelines.

Reporting Requirements of Aerially Delivered Wildland Fire Chemicals Into Waterways, Waterway Buffer Areas and Mapped Avoidance Areas

During training or briefings, inform field personnel of:
• Environmental guidelines for fire chemical application;
• Requirements for avoiding contact with waterways;
• Additional mapped avoidance areas as designated by individual agency; and
• Their responsibility for upward reporting in the event of application, for whatever reason, into avoidance areas.

If application of wildland fire chemical occurs or anyone believes it may have been introduced within waterways, waterway buffered areas, or other mapped avoidance areas, the following is required as appropriate:
• They should inform their supervisor;
• The information will be forwarded to incident management and the agency administrator, usually through the resource advisor;
• The incident or host authorities must immediately contact specialists within the local jurisdiction; and
• Notifications and reporting will be completed as soon as possible.

Procedures have been implemented for the required reporting. All information, including reporting tools and instructions are posted on the websites at https://www.fs.fed.us/rm/fire/wfcs and ### https://www.fs.fed.us/fire/retardant/ https://www.fs.fed.us/managing-land/fire/chemicals.

The FS has additional reporting requirements for threatened, endangered, proposed, candidate and FS listed sensitive species for aerially delivered fire retardant only. This requirement resulted from the Forest Service’s acceptance of Biological Opinions received from the National Marine Fisheries Service (NMFS) and the U.S. Fish and Wildlife Service (FWS), and the 2011 Record of Decision (ROD) for Nationwide Aerial Application of Fire Retardant on National Forest System Lands. The procedures, reporting tools, and instructions can be found at the same websites listed above.

Endangered Species Act (ESA) Emergency Consultation

The following provisions are guidance for complying with the emergency section 7 consultation procedures of the ESA for wildland fire chemicals. These provisions do not alter or diminish an action agency’s responsibilities under the ESA.

Where T&E species or their habitats are potentially affected by application of wildland fire chemicals, the following additional procedures apply and shall be documented in initial or subsequent fire reports:
• As soon as practicable after application of wildland fire chemical near waterways or other avoidance area as designated by agency, determine whether the application has caused any adverse effects to a T&E species or their habitat. This can be accomplished by the following:
  ○ Ground application of wildland fire chemical outside a waterway is presumed to avoid adverse effects to aquatic species and no further consultation for aquatic species is necessary;
  ○ Aerial application of wildland fire chemical outside 300 ft. (or in any additional buffer areas beyond 300 ft. established on NFS lands for certain species) of a waterway is presumed to avoid adverse effects to aquatic species and no further consultation for aquatic species is necessary;
  ○ Aerial application of wildland fire chemical within 300 ft. (or in any additional NFS lands buffer areas) of a waterway requires that the unit administrator determine whether there have been any adverse effects to T&E species within the waterway. If no adverse effects to aquatic T&E
species or their habitats, no additional requirement to consult on aquatic species with FWS or NMFS is required; and/or

- Application of wildland fire chemical within other avoidance areas as designated by agency requires the agency administrator to determine whether there have been any adverse effects to T&E species. If there are no adverse effects to species or their habitats there is no additional requirement to consult with FWS or NMFS.

- **FS – Note:** the FS has completed consultation with regulatory agencies (FWS and NOAA) for aerial delivery of fire retardant (only) in National Forest System lands; please refer to 
  https://www.fs.fed.us/fire/retardant/ for additional information and re-initiation of consultation requirements.

If the action agency determines that there were adverse effects on T&E species or their habitats then the action agency must consult with FWS and NMFS, as required by 50 CFR 402.05 (Emergencies). Procedures for emergency consultation are described in the USFWS Endangered Species Consultation Handbook, Chapter 8 (March, 1998). In the case of a long duration incident, emergency consultation should be initiated as soon as practical during the event. Otherwise, post-event consultation is appropriate. The initiation of the consultation is the responsibility of the unit administrator.

**Operational Guidelines for Invasive Species**

Refer to Chapter 11 for guidance on minimizing potential transmission of invasive species.
Chapter 13

Firefighter Training and Qualifications

Introduction

National Wildfire Coordinating Group (NWCG) sanctioned firefighters are trained and qualified according to the NWCG and other standards, as outlined below.

Standards

Federal agencies have consolidated minimum standards and information for frequently used positions not included in the PMS 310-1. The *Federal Wildland Fire Qualifications Supplement* can be found on the NWCG Qualifications website at https://iqcsweb.nwcg.gov/.

Agency standards for training and qualifications may exceed the minimum standards established by National Wildfire Coordinating Group (NWCG). Such additional standards will be approved by the Fire Directors, and implemented through the Incident Qualifications and Certification System (IQCS). Standards which may exceed the minimum standards established by NWCG are identified in:

- **FS** – The Forest Service Fire and Aviation Qualifications Guide (FSFAQG) at https://www.fs.fed.us/fire/publications/.
- **BIA** – Standards can be referenced at https://www.bia.gov/nifc/index.htm https://www.bia.gov/ots/dfwfm/bwfm

Fire Management Leadership (FML), (geographic or national) is required for all Bureau Agency Administrators/Line Officers including Agency Superintendents; Agency Foresters or Natural Resource Managers; and Regional Foresters. Regional Directors, Deputy Directors in natural resource program areas, and Tribal Natural Resource Program Administrators are also encouraged to attend this course. The national level course offered by NAFRI is the preferred alternative to the geographic course.

Release Date: January 2020
Federal agencies will accept each other’s qualifications/certifications, regardless of jurisdiction and throughout the duration of the incident.

**Qualification and Certification Process**

Each unit with fire management responsibilities will establish an Incident Qualification Card qualification and certification process, which may include a qualification and certification committee. In areas cooperating with other federal, state, or local agencies, an interagency qualification and certification committee should be established and include representatives from each unit.

- **BIA** – Regional/Local Unit Red Card Committees will be used to determine qualifications and training requirements.

These qualification and certification committees provide management oversight and review of the wildland and prescribed fire positions under their jurisdiction.

The committee:

- Ensures that qualifications generated by IQCS or other agency systems for employees are valid by reviewing the training and experience of each employee.
- Determines whether each employee possesses the personal characteristics necessary to perform the wildland and prescribed fire positions in a safe and efficient manner.
- Makes recommendations to the appropriate Agency Administrator or designee who is responsible for final certification signature.
- Develops interagency training needs and sponsors courses that can be offered locally.
- Ensures training nominees meet minimum requirements for attending courses.

**Non-NWCG Agency Personnel Qualifications**

Personnel from non-NWCG agencies meeting NWCG PMS 310-1 prerequisites can participate in and receive certificates for successful completion of NWCG courses. Agency employees can complete the Task Blocks, Evaluation Record and Verification/Certification sections of a cooperating organizations employee Position Task Book. Agency employees will not initiate or complete the Agency Certification sections of the Position Task Book for non-agency employees.

Personnel from agencies that do not subscribe to the NWCG qualification standards may be used on agency managed fires. Agency fire managers must ensure these individuals are only assigned to duties commensurate with their competencies, agency qualifications, and equipment capabilities.

**Non-NWCG Agency Personnel Use on Prescribed Fire**

qualifications for personnel involved in prescribed fires on which resources of
more than one agency are utilized—unless local agreements specify otherwise.
This guide may be found at https://www.nwcg.gov/publications/310-1.

### Incident Qualifications and Certification System (IQCS)

The Incident Qualifications and Certification System (IQCS) is the fire
qualifications and certification record keeping system. The Responder Master
Record report provided by the IQCS meets the agency requirement for
maintaining fire qualification records. The system is designed to provide
managers at the local, state/regional, and national levels with detailed
qualification, experience, and training information needed to certify employees
in wildland fire positions. The IQCS is a tool to assist managers in certification
decisions. However, it does not replace the manager’s responsibility to validate
that employees meet all requirements for position performance based on their
agency standards.

### A hard copy file folder will be kept for each employee. The contents will
include, but are not limited to training records for all agency required courses,
evaluations from assignments, position task book verification, yearly updated
IQCS forms, and the Responder Master Record from IQCS. All records will be
stored and/or destroyed in accordance with agency policies. Certifying officials
have the option to keep employee qualification records as a hard copy file or an
electronic file using the IQCS document upload feature. Both options must
include proof of all required training, certified position task books, required
license/certification and documentation for administrative actions (system
overrides from Certifying Officials). Hard copy files will also include current
copies of the IQCS Master Record and Incident Qualification Card. All records
will be stored and/or destroyed in accordance with agency policies.

- **BLM** – These policies can be found at

- **BLM/NPS** – IQCS account managers will have an IQCS Delegation of
  Authority from the certifying official. A Delegation of Authority can be
  found at https://iqcsweb.nwcg.gov/.

- **FS** – Forest Service Fire and Aviation Qualifications Guide (FSFAQG) at
  https://www.fs.fed.us/fire/publications/ https://www.fs.fed.us/managing-
  land/fire.

- **BIA** – All BIA/Tribal units with Fire Management Programs are required
to use IQCS to track all federal emergency responders. Agency
Superintendents and Line Officers of Tribal fire programs are considered
Certifying Officials pursuant to the definition in the NWCG PMS 310-1. As
such, they are responsible for ensuring that agency fire management
personnel develop and maintain fire management job qualifications and
meet physical fitness standards in accordance with policy and assign
personnel to fire suppression, prescribed fire, wildland fire use activities
according to qualifications and demonstrated ability. They are responsible
for entering and maintaining employee fire qualifications in the IQCS.
Agency Superintendents and Line Officers of Tribal Fire Programs who choose Delegation of Authority of the Certifying Official role must do so in writing, utilizing the Delegation of Authority form found on the IQCS website at https://iqcsweb.nwcg.gov/.

Certification of Non-Agency Personnel
Non-agency firefighters will be certified by state or local fire departments, or private training providers approved by a Memorandum of Understanding (MOU) through their local GACC. Agencies will not assist in the administration, or sponsor the Work Capacity Test (WCT), as the certifying agency.

Incident Qualification Card
The Agency Administrator (or delegate) is responsible for annual certification of all agency and Administratively Determined (AD) personnel serving on wildfire, prescribed fire, and all hazard incidents. This responsibility includes monitoring medical status, fitness, training, performance, and ensuring the responder meets all position performance requirements.

Training and successful completion of the appropriate WCT must be accomplished and documented. All Incident Qualification Cards issued to agency employees, with the exception of Emergency Firefighter (EFF-paid or temporary employees at the FFT2 level), will be printed using the IQCS. Incident Qualification Cards issued to EFF or temporary employees at the FFT2 level may be printed without use of the IQCS.

Each agency will designate employees at the national, regional/state, and local levels as Fire Qualifications Administrators, who ensure all incident experience, incident training, and position task books for employees within the agency are accurately recorded in the IQCS. All records must be updated annually or modified as changes occur.

- **BLM** – BLM Recertification Policy: If an employee (including an agency-sponsored AD) has lost currency in a position, the employee is converted to trainee status for that position. In order to regain full qualification for the position, the employee must demonstrate the ability to perform in the position as determined by the Certifying Official. Prior to recertification, the employee must:
  - Complete the BLM Recertification Evaluation found at https://www.nifc.gov/training/trainingBLM_main.html.
  - Complete one or more evaluation assignments.
  - Complete any additional requirements as determined by the Certifying Official (e.g., additional assignments and/or courses).

  **NOTE:** This policy only applies to positions for which a task book is required.

- **BLM** – State Fire Management Officers will certify Position Task Books and Incident Qualification Cards for Area Command and Type 1 Command and General Staff positions.
• **NPS** – Certification for Area Command and Type 1 Command and General Staff (C&GS) position task books will be done at the national office level; Type 2 C&GS, and any position task books issued to park fire management officers will be certified at the regional office level. All other position task books may be certified at the local unit level.

• **NPS** – It is NPS policy that two or more assignments be accomplished after completing a Position Task Book, and receiving certification, before an individual begins movement to the next higher level.

• **FWS** – See Fire Management Handbook for guidance on qualification recertification.

• **FS** – Refer to FSH 5109.17, chapter 10, and the FSFAQG.

• **BIA** – All personnel sponsored by BIA/Tribal units are required to have an Incident Qualification Card. BIA Recertification Policy: If an employee, including an agency-sponsored AD, has lost currency in a position, the employee is converted to trainee status for that position. In order to regain full qualification for the position, the employee must demonstrate the ability to perform in the position as determined by the Certifying Official. Prior to recertification, the employee must:
  - Complete one or more evaluation assignments.
  - Complete any additional requirements as determined by the Certifying Official (e.g., additional assignments and/or courses).

---

**Incident Qualification Card Expiration Dates**

Incident Qualification Cards for responders that possess qualifications requiring Work Capacity Tests (WCT) and the Annual Fireline Safety Refresher Training course (RT-130) are valid through the earliest expiration date (either fitness or refresher) listed on the card. Incident Qualification Cards for responders that possess qualifications that do not require WCT or RT-130 for issuance are valid for 12 months from the date the card is signed by a certifying official.

• **FS** – The WCT is considered effective for 13 months from the date passed. If an employee is on an emergency assignment on the date their WCT/refresher expires, they will complete their assignment including any extensions. Upon return to their duty station, they must complete the WCT/refresher and acquire a new Incident Qualification Card prior to accepting any new assignments.

---

**Universal Training Requirements**

All personnel filling NWCG recognized positions on the fireline must have completed:

- S-130 Firefighter Training (including the required field exercises);
- S-190 Introduction to Wildland Fire Behavior;
- L-180 Human Factors on the Fireline;
- ICS-100 Introduction to ICS; and
- IS-700 NIMS: An Introduction (current version).
Annual Fireline Safety Refresher Training

Annual Fireline Safety Refresher Training is required for those positions identified in the NWCG PMS 310-1. Annual Fireline Safety Refresher Training must include the following core components:

- **Entrapment Avoidance** – Use training and reference materials (e.g., LCES, Standard Firefighting Orders, Watch Out Situations, Wildfire Decision Support System (WF DSS) direction, Fire Management Plan priorities) to study the risk management process as identified in the Incident Response Pocket Guide (IRPG) as appropriate to the participants;

- **Current Issues** – Review and discuss current topics which could be based on the new modules or areas of concern identified by your agency or geographic area. Review forecasts and assessments for the upcoming fire season and discuss implications for firefighter safety;

- **Fire Shelter** – Review and discuss last resort survival including escape and shelter deployment site selection. Conduct “hands-on” fire shelter inspections. Practice shelter deployments in applicable crew/module configurations (wearing fireline personal protective equipment during fire shelter practice can enhance the learning experience for students); and

- **Other Hazards and Safety Issues** – Choose additional hazard and safety subjects, which may include SAFENET, current safety alerts, site/unit-specific safety issues and hazards.

These core components must be sufficiently covered to ensure that personnel are aware of safety concerns and procedures and can demonstrate proficiency in fire shelter deployment. The minimum refresher training hour requirements for each agency is identified below. Training time may be extended in order to effectively complete this curriculum or to meet local training requirements.

- **BLM/BIA** – 4 hours.
- **NPS/FWS/FS** – No minimum hourly requirement; core topics as shown above will be covered.

The Annual Fireline Safety Refresher Training course (RT-130) is not a self-study course. Minimum requirements have been established for instructors for Annual Fireline Safety Refresher Training. These requirements will ensure that an appropriate level of expertise and knowledge is available to facilitate refresher training exercises and discussions.

- Lead instructors must be a qualified single resource boss.
- Unit instructors must be a qualified firefighter type one (FFT1).
- Adjunct instructors may be utilized to provide limited instruction in specialized knowledge and skills at the discretion of the lead instructor. They must be experienced, proficient and knowledgeable of current issues in their field of expertise.
- All instructors will need the knowledge and skills to utilize current educational technology as it relates to the Wildland Fire Safety Training
Annual Refresher (WFSTAR) website, such as video streaming, downloading interactive videos, and use of mobile applications and devices.

For additional information please refer to the current NWCG Field Manager’s Course Guide NWCG Standards for Course Delivery (PMS 901-1) at https://www.nwcg.gov/publications/901-1.

Annual Fireline Safety Refresher training will have a 12-month currency.

- FS – Forest Service employees have a 13-month currency requirement for Annual Fireline Safety Refresher training.

Firefighters who receive initial fire training are not required to take Annual Fireline Safety Refresher Training in the same calendar year. A website, https://www.nwcg.gov/publications/training-courses/rt-130, titled Annual Fireline Safety Refresher Training is available to assist in this training.

Entrapment avoidance and deployment protocols are identified in the Incident Response Pocket Guide (IRPG) (PMS 461/NFES 1077). The guide contains a specific “Risk Management Process” and “Last Resort Survival Checklist.”

- BLM – The “Do What’s Right” training is required annual training but is not a prerequisite for issuance of an Incident Qualification Card.

**Medical Examinations**

Agency Administrators and supervisors are responsible for the occupational health and safety of their employees performing wildland fire activities, and may require employees to take a medical examination at any time.

- BLM/NPS/FWS/BIA – An employee may be required to take a medical examination whenever there is a reasonable concern, based on objective evidence, about the employee’s continued capacity to meet any of the physical or medical requirements of the position. Such an examination may be ordered for instances of job-related injuries/illnesses and for those that are not job-related. Supervisors should contact their Servicing Human Resource Office and Wildland Fire Safety Program Manager for assistance with preparing the memorandum for requiring a medical examination. The DOI MSP Program Management will review the memorandum before issuance to the employee.

Established medical qualification programs, as stated in 5 CFR 339, provide consistent medical standards for arduous positions in order to safeguard the health of employees whose work may subject them or others to significant health and safety risks due to occupational or environmental exposure or demand.
Any employee with an active worker’s compensation (OWCP) case or other physical or medical limiting factors/restrictions that preclude them from fully performing the activities of an arduous position must disclose this as part of the self-certification or medical examination process.

Information on any medical records is considered confidential and must be kept in the employee’s medical file.

Arduous Fitness Level – Department of Interior Wildland Firefighter Medical Standards Program (DOI MSP)

Per Office of Wildland Fire (OWF) Policy Memorandum 2016-014, “All employees (incumbents and applicants) must take an examination meeting Federal Interagency Wildland Fire Medical Standards every three years regardless of employment status and hiring authority, including emergency firefighters (Administratively Determined – AD/casual hires) and collateral duty firefighters who participate in arduous duty wildland fire activities. An examination taken and successfully cleared in accordance with the DOI MSP direction is required prior to participating in the Arduous Duty Work Capacity Test (Pack Test), performing arduous duty, wildland fire duties, or any agency sanctioned physical fitness training to prepare for these duties. In the years between the periodic examinations, an employee will self-certify their medical concerns and risk in taking the Work Capacity Test.” Information regarding the DOI MSP can be obtained from agency Wildland Fire Safety Program Manager and at https://www.nifc.gov/medical_standards/.

If diagnostic testing beyond what is required by the DOI MSP is needed to determine medical qualification, agency approval is required before the tests are conducted. If the agency approves a request for further testing, the agency is responsible for payment. Additional testing or treatment carried out without prior approval shall be at the individual’s expense.

Exam/Self-Certification Periodicity and Changes in Medical Status

A baseline or periodic exam is required every 36-months from the date of the exam regardless of the qualification date. Annual self-certifications between periodic exams must be completed within 12-months of the previous medical qualification date.

• BLM/NPS — If an employee’s medical qualification expires prior to successfully clearing a periodic exam or self-certification, they are no longer medically qualified. It is incumbent on the supervisor to block, in IQCS, all arduous duty-related qualifications until the employee has been medically cleared to resume arduous duty work.

Supervisors may order a self-certification for employees prior to the 12-month expiration of the last medical qualification to accommodate unit level alignment of recertification schedule (RT-130, medical qualification or work capacity testing). A self-certification must precede the arduous work capacity test by no more than 45 days prior to fitness testing.
If a Department of the Interior arduous duty wildland firefighter (WLFF) develops a change in medical status between periodic medical exams or self-certifications, the WLFF is required to immediately report this change to his/her supervisor and report it at the time of the next medical exam or self-certification. Changes in medical status that require reporting are:

- Injury or illness which may prevent performance of arduous duty.
- Expiration of periodic medical exam or self-certification.

  ○ BLM/NPS/BIA – If a change in medical status for BLM/NPS/BIA arduous duty firefighters has been reported, it is incumbent on the BLM/NPS/BIA Tribal supervisor to block, in IQCS, all arduous duty related qualifications until the employee has been medically cleared to resume arduous duty work.

A baseline or periodic exam is required every 36-months from the date of the exam regardless of the qualification date. Annual self-certifications between exams must precede the arduous work capacity test by no more than 45 days prior to fitness testing.

If a Department of the Interior arduous duty wildland firefighter (WLFF) develops a significant change in medical status between medical exams or self-certifications, the WLFF is required to immediately report this change to his/her supervisor and complete a self-certification. A significant change in medical status is defined as any injury or illness which may prevent performance of arduous duty. It is critical the employee understands the importance of reporting a significant change in medical status and ceasing arduous duty until cleared. Eligibility for compensation or benefit claims may be affected by a failure to report. If a change in medical status for arduous duty firefighters has been reported, it is incumbent on the supervisor to ensure the firefighter ceases to perform arduous duty and if necessary, ensure all arduous duty related qualifications are prevented from being sent to ROSS in IQCS until the employee has been medically cleared to resume arduous duty work.

A WLFF must also immediately inform his/her supervisor if they have not completed an exam within the previous 36 months and must not resume arduous duty work until completion of a periodic exam and medical qualification.

  ○ NPS – NPS Law Enforcement Rangers who are collateral duty wildland firefighters will have their LE medical exam results reviewed against the Federal Interagency Wildland Firefighter Medical Standards for medical qualification determination. If a determination of Not Cleared is made, the DOI MSP Risk Mitigation/Waiver process will be used.

  ○ FWS – Periodicity requirements for Refuge law enforcement examinations will be applied to arduous duty wildland fire positions. Law enforcement officers wishing to perform in NWCG PMS 310-1 or USFWS agency-specific wildland fire positions with an arduous fitness requirement must pass the arduous work capacity test on an annual basis. The HSQ will be used for off exam years prior to arduous work capacity testing.
### CHAPTER 13  
**FIREFIGHTER TRAINING AND QUALIFICATIONS**

- BIA – Refer to agency specific standards located at [https://www.nifc.gov/medical_standards/](https://www.nifc.gov/medical_standards/).
- BIA – BIA structural firefighters may submit a completed NFPA exam that includes all of the DOI MSP exam requirements for RMO review against the Federal Interagency Wildland Firefighter Medical Standards for wildland fire medical qualification.

### Medical Exam Process for Light and Moderate Fitness Levels

Beginning January 2019, the medical screening process for light and moderate work capacity testing (Health Screening Questionnaire (HSQ)) will be centralized and automated through the DOI MSP’s national contractor. For details on the process visit [https://www.nifc.gov/medical_standards](https://www.nifc.gov/medical_standards).

- FS – Medical exams will be paid from a Washington Office fund code. Additional specialized testing other than the tests listed on the OF-178 will not be covered by the Forest Service.

If the SHRO or FMO has a direct concern about an employee’s/applicant’s capacity to meet the physical or medical requirements of a position, the agency may require the employee/applicant to report for a specific medical evaluation. For more information, contact your SHRO or agency Wildland Fire Safety Program Manager.

- NPS – The law enforcement medical exam for NPS rangers, who are collateral duty wildland firefighters, will suffice for arduous, moderate, and light fitness level clearance.
- FWS – Periodicity requirements for Refuge law enforcement examinations will be applied to light or moderate. Law enforcement officers wishing to perform in NWCG PMS 310-1 or USFWS agency-specific wildland fire positions with a light or moderate fitness requirement must pass the appropriate level work capacity test on an annual basis. The HSQ will be used for off exam years prior to light or moderate work capacity testing.
- FS – The completed OF-178 is submitted to the Reviewing Medical Officer for the Agency to review and medically clear.
- BIA – Individuals who opt out of the DOI MSP at the arduous level will be required to complete a Fitness for Duty exam prior to participating in a WCT at a lower fitness level.

### Work Capacity Tests

#### Work Capacity Test (WCT) Categories

The [NWCG National Incident Management System: Wildland Fire Qualification System Guide NWCG Standards for Wildland Fire Position Qualifications](https://www.nwcg.gov/standards/wildland-fire-position-qualifications/) (PMS 310-1) identifies fitness levels for specific positions. There...
are three fitness levels—Arduous, Moderate, and Light—which require an individual to demonstrate their ability to perform the fitness requirements of the position. Positions in the “no fitness level required” category are normally performed in a controlled environment, such as an incident base.

Law Enforcement physical fitness standard is accepted as equivalent to a “light” WCT work category.

### Work Capacity Test Categories

<table>
<thead>
<tr>
<th>WCT Category</th>
<th>Distance</th>
<th>Weight</th>
<th>Time</th>
</tr>
</thead>
<tbody>
<tr>
<td>Arduous Pack Test</td>
<td>3 miles</td>
<td>45 lb</td>
<td>45 min</td>
</tr>
<tr>
<td>Moderate Field Test</td>
<td>2 miles</td>
<td>25 lb</td>
<td>30 min</td>
</tr>
<tr>
<td>Light Walk Test</td>
<td>1 mile</td>
<td>None</td>
<td>16 min</td>
</tr>
</tbody>
</table>

- **Arduous** – Duties involve field work requiring physical performance with above average endurance and superior conditioning. These duties may include an occasional demand for extraordinarily strenuous activities in emergencies under adverse environmental conditions and over extended periods of time. Requirements include running, walking, climbing, jumping, twisting, bending, and lifting more than 50 pounds; the pace of the work typically is set by the emergency conditions.

- **Moderate** – Duties involve field work requiring complete control of all physical faculties and may include considerable walking over irregular ground, standing for long periods of time, lifting 25 to 50 pounds, climbing, bending, stooping, twisting, and reaching. Occasional demands may be required for moderately strenuous activities in emergencies over long periods of time. Individuals usually set their own work pace.

- **Light** – Duties mainly involve office type work with occasional field activity characterized by light physical exertion requiring basic good health. Activities may include climbing stairs, standing, operating a vehicle, and long hours of work, as well as some bending, stooping, or light lifting. Individuals can usually govern the extent and pace of their physical activity.

### Work Capacity Test (WCT) Administration

The Work Capacity Test (WCT) is the official method of assessing wildland firefighter fitness levels. General guidelines can be found in the Work Capacity Tests for Wildland Firefighters, Test Administrator’s Guide Work Capacity Test: Administrator’s Guide (PMS 307, NFES 1109).

WCT administrators must confirm medical clearance at the appropriate fitness level through review of a clearance list provided by the Fire Management Officer (or delegate) or by verifying certificate of WCT clearance at the time of
the WCT. There is no need for the WCT Administrator to collect or retain copies of the certificate of clearance.

At a minimum, WCTs are administered annually to all employees, including AD/EFF who will be serving in wildland fire positions that require a fitness level. The currency for the WCT is 12 months.

- **FS** — Currency for WCT is 13 months.

The WCT results shall be documented on the WCT Record available online as Appendix O at https://www.nifc.gov/policies/pol_ref_redbook.html. The WCT Record captures information that is covered under the Privacy Act and should be maintained in accordance with agency Freedom of Information Act (FOIA) guidelines.

Administration of the WCT of non-federal firefighters is prohibited for liability reasons. Potential emergency firefighters who would be hired under Emergency Hire authority by the agency must be in AD pay status or sign an agency-specific volunteer services agreement prior to taking the WCT.

A Job Hazard Analysis (JHA) or Risk Assessment (RA) shall be developed and approved for each field unit prior to administrating the WCT. Administer the test using the JHA/RA as a briefing guide.

- **BLM** — A risk assessment shall be developed and approved for each field unit prior to administering the WCT.
- **BIA** — A RA shall be developed and approved for each field unit prior to administering the WCT. A RA for the WCT can be found at https://www.bia.gov/nifc/safety/WildlandFireRiskAssessment/index.htm.

The local unit shall prepare a medical response plan (such as an ICS-206 form), evaluate options for immediate medical care and patient transport, and identify closest emergency medical services. A minimum of a qualified Medical First Responder/Emergency Medical Responder (EMR) must be on site during WCT administration. Based upon a thorough evaluation of potential medical treatment and evacuation scenarios, a higher level of on-site emergency medical qualifications and equipment may be warranted (e.g., Emergency Medical Technician (EMT) or paramedic).

An Automatic External Defibrillator (AED) is required on-site during all WCTs.

Personnel taking the WCT will only complete the level of testing (Pack, Field, Walk) required by the highest fitness level identified for a position on their Incident Qualification Card. Employees shall not take the WCT unless they have an Incident Qualification Card qualification that requires it, and only at the fitness level required by that position as identified in the ### NWCG PMS 310-1 or agency-specific guidance or policy.

Treadmills are not approved for Work Capacity Testing.
WCT results must be entered into the IQCS annually to update the fitness level and date that will appear on the Incident Qualification Card. WCT dates entered in IQCS will reflect the date the employee passed the fitness test. The results of the most recent WCT will always supersede the results of any previous WCT, even if previous WCTs were within the currency period.

- **NPS/FWS** – Law Enforcement Officers are required to provide a copy of the medical clearance for verification and tracking purposes to the appropriate incident qualifications and certifications system (IQCS) account manager. Account managers will reflect the appropriate examination type and currency for the Law Enforcement Officer examinations in the physical examinations portion of the IQCS system.

- **FS** – Failed or not completed WCT attempts are to be entered into the eMedical system by the HSQ Coordinator.

**Work Capacity Test – Retesting**

Those who do not pass the WCT will be provided another opportunity to retest. Employees will have to wait at least 48 hours before retaking the WCT. If an employee sustains an injury (verified by a licensed medical provider) during a test, the test will not count as an attempt. Once an injured employee has been released for full duty, the employee will be given time to prepare for the test (not to exceed 4 weeks). The numbers of retesting opportunities that will be allowed include:

- Three opportunities total for permanent employees required to pass a test for duties in the fire program.
- One opportunity for temporary employees required to pass a test (a second chance maybe provided at the discretion of fire management).
  - **FS** – Direction can be found in the USFS WCT Implementation Guide at https://www.fs.fed.us/managing-land/fire.
  - **BIA** – Employees who fail two WCT’s will develop an appropriate Physical Fitness Plan with their supervisors to ensure accountability before the 3rd test is administered.
  - **BIA** – Temporary Employees- A second test may be authorized by the local unit after 14 days to allow the individual to train for the WCT. A failed second test will result in a 90 day suspension without additional testing during that period.

**Physical Fitness**

**Physical Fitness and Conditioning**

Agency Administrators are responsible for ensuring the overall physical fitness of firefighters. Employees serving in wildland fire positions that require a fitness rating of arduous as a condition of employment are authorized one hour of duty time each work day for physical fitness conditioning. Employees serving in positions that require a fitness rating of moderate or light may be authorized up to three hours per week.

- **BLM** – See Chapter 2 for physical fitness conditioning requirements.
Fitness conditioning periods may be identified and structured to include aerobic and muscular exercises. Team sports are not authorized for fitness conditioning. Chapters 5, 6, 7, 8, and 9 and Appendices F, G, and H of *Fitness and Work Capacity 2009 ed.* (PMS 304-2, NFES 1596) and the Interagency Fire Fitness Program in the USFS *WCT Implementation Guide* provide excellent guidance concerning training specifically for the pack test, aerobic fitness programs, and muscular fitness training. [https://www.nifc.gov/FireFit/index.htm](https://www.nifc.gov/FireFit/index.htm)

- **NPS** – A fitness plan is required for all NPS personnel participating in a fitness program (DO-57). For health and fitness purposes, those who are fire-qualified at less than the arduous fitness level are not required to meet the mandatory fitness program requirements of DO-57 for wildland fire management. They are strongly encouraged to participate in the voluntary fitness program, and must still meet physical fitness/work capacity requirements as outlined in the *Wildland Fire Qualifications System Guide NWCG Standards for Wildland Fire Position Qualifications* (PMS 310-1) for positions with Moderate and Light fitness requirements.

- **FWS** – Refer to Chapter 4, Physical Fitness and Conditioning.

- **FS** – Forest Service direction is found in FSH 5109.17 and the FSFAQG. NFFE Partnership bargaining unit employees may only be required to successfully complete the WCT once per year.

- **BIA** – Physical Fitness plan must have supervisor’s approval. Refer to Chapter 6, Physical Fitness and Conditioning.

## Minimum Age Requirements for Hazardous Duty Assignments on Federal Incidents

Persons under 18 years old will not perform hazardous duties during wildland fire management operations on federal jurisdictions.

### Engine Modules

Staffing levels and specific requirements for engine personnel may be found in Chapter 14, Firefighting Equipment.

### Helicopter Modules

Staffing levels and specific requirements for helicopter personnel may be found in Chapter 16, Aviation.

### Smokejumpers (SMKJ)

Smokejumpers provide professional and effective fire suppression, fuels reduction, and fire management services to help land managers meet objectives.

### Smokejumper Policy

Smokejumper operations are guided by direction in the interagency section of the *Interagency Smokejumper Operations Guide (ISOG)*.
Each base will comply with smokejumper operations standards. The arduous duties, specialized assignments, and operations in a variety of geographic areas require smokejumpers to have uniform training, agency approved equipment, communications, organization, and operating procedures.

**Smokejumper Communications**
All smokejumpers carry programmable radios and are proficient in their use and programming procedures.

**Smokejumper Training**
To ensure proficiency and safety, smokejumpers complete annual training that covers aspects of aviation, parachuting, fire suppression tactics, administrative procedures, and safety related to the smokejumper mission and fire operations. The training program for first-year smokejumpers is four weeks long. Candidates are evaluated to determine:
- Level of physical fitness;
- Ability to learn and perform smokejumper skills;
- Ability to work as a team member;
- Attitude; and
- Ability to think clearly and remain productive in a stressful environment.

**Smokejumper Target Qualifications**

<table>

<td></td>
</tr>
</tbody>
</table>

**Smokejumper Medical Standards**
Smokejumper medical standards are the same as the Federal Interagency Wildland Firefighter Medical Standards-Arduous Duty Wildland Firefighter.

**USFS Smokejumper Physical Fitness Standards**
The national minimum standards for smokejumpers are:
- 1.5 mile run in 11:00 minutes or less;
- 45 sit-ups;
- 25 pushups;
- 7 pull-ups;
- 110 lb. pack-out over 3 miles/level terrain/90 minutes*; and
- Successful completion of the WCT at the arduous level.
CHAPTER 13  
FIREFIGHTER TRAINING AND QUALIFICATIONS

*This element is tested during Smokejumper Rookie Training.

1. **BLM** – Refer to Chapter 2 for physical fitness standards.

### Interagency Hotshot Crews (IHC)

Interagency Hotshot Crews provide an organized, mobile, and skilled hand crew for all phases of wildfire suppression. IHCs are comprised of 18-22 firefighters and are used primarily for wildfire suppression, fuels reduction, and other fire management duties. IHC’s are capable of performing self-contained initial attack suppression operations, and commonly provide incident management capability at the Type 3 or 4 levels.

**IHC Policy**

IHC standards provide consistent planning, funding, organization, and management of the agency IHCs. The sponsoring unit will ensure compliance with the established standards. The arduous duties, specialized assignments, and operations in a variety of geographic areas required of IHCs dictate that training, equipment, communications, transportation, organization, and operating procedures are consistent for all agency IHCs.

As per agency policy, all IHCs will be managed under the Standards for Interagency Hotshot Crew Operations (SIHCO). BLM/NPS – BLM Preparedness Review Checklist #18 (Hotshot Crew) supersedes the checklist found in the SIHCO. BLM – Additional guidance for BLM IHCs is contained in Chapter 2. BIA – IHC Superintendent and Assistant Superintendent are required to have the additional qualification of IHCS and/or IHCA on their Red Card prior to mobilization. Additional information regarding this standard can be found in the Federal Wildland Fire Qualifications Supplement at https://iqcsweb.nwcg.gov/

**IHC Certification**

The process for IHC certification is found in the Standards for Interagency Hotshot Crew Operations (SIHCO).

**Annual Crew Pre-Mobilization Process**

The superintendent of crews holding IHC status the previous season are required to complete the Annual IHC Mobilization Checklist (SIHCO, Appendix C) and send the completed document to the local GACC prior to making the crew available for assignment each season.

**Annual IHC Readiness Review**

On an annual basis the superintendent of crews holding IHC status the previous season are required to complete the Annual IHC Preparedness Review (SIHCO Appendix B). This process is designed to evaluate crew preparedness and compliance with SIHCO. The annual review will be conducted while the crew is
fully staffed and operational. The review is not required prior to a crew being
made available for incident assignment at the beginning of their availability
period. When a review document is completed, the document is kept on file at
the local (host) unit fire management office.

IHC Organization
Individual crew structure will be based on local needs using the following
standard positions: Superintendent, Assistant Superintendent, Squad Leader,
Skilled Firefighter, and Crewmember.

- BLM – IHCs have the option of traveling with 25 personnel when on
  incident assignments.
- NPS – IHCs have the option of traveling with 22 personnel when on
  incident assignments as authorized by the sending or receiving unit.

When traveling by charter aircraft, IHC’s should be prepared to take no more
than 20 personnel, unless they receive approval via normal dispatch channels.

IHC Availability Periods
IHCs will have minimum availability periods as defined in the SIHCO.
Availability periods may exceed the required minimum availability period. The
Crew Superintendent will inform the local supervisor and the GACC of any
changes in the crew's availability.

National IHC Status Reporting System
IHCs will report status through the National IHC Status Reporting System. IHC
superintendents will regularly update the system with any change in crew status
and/or current utilization when on assignment.

IHCs may report status by three methods:
- Via e-mail to BLM_FC_Crews@blm.gov (preferred method);
- Via the internet to the Hotshot Status submission form (link available from
  the Crew page of the NICC website); or
- Contacting the NICC Crew Desk at 208-387-5400.

IHC Communications
IHCs will provide a minimum of eight programmable multi-channel radios per
crew as stated in the SIHCO.

IHC Transportation
Crews will be provided adequate transportation. The number of vehicles used to
transport a crew should not exceed five. All vehicles must adhere to the certified
maximum Gross Vehicle Weight (GVW) limitations.

Other Hand Crews

Policy
All crews must meet minimum crew standards as defined below as well as any additional agency, state, or contractual requirements. Typing will be identified at the local level with notification made to the local GACC.

- **BLM** – for additional standards and certification requirements, refer to Chapter 2.

**Wildland Fire Modules (WFM)**

The primary mission of a WFM is to provide an innovative, safe, highly mobile, logistically independent, and versatile fire module with a primary commitment to maintain fire’s role as a natural ecological process for wildland fire management and incident operations.

WFMs are comprised of 7-10 firefighters. The WFM program facilitates the use of fire and other management techniques involving planned and unplanned wildland fire events. WFMs are highly skilled and versatile fire crews, which provide technical and ecological based expertise in the areas of long term planning, ignitions, holding, and suppression, and fire effects monitoring. For more information please refer to **NWCG Standards for Wildland Fire**.

WFM Policy
All WFM operations will be conducted adhering to the Interagency Standards for Wildland Fire Module Operations (ISWFMO), NWCG Standards for Wildland Fire Module Operations (PMS 430). Sponsoring units in conjunction with the appropriate Geographic Area Coordination Center will ensure compliance of all WFMs according to the standards set within the ISWFMO. The arduous duties, specialized assignments, and operations in a variety of geographic areas require WFMs to have uniform training, agency approved equipment, communications, organization, and operating procedures.

WFM Types and Certification
WFMs ready for assignment will be certified as Type 1 WFM (WFM1) or Type 2 WFM (WFM2). Refer to the Interagency Standards for Wildland Fire Module Operations (ISWFMO) – NWCG Standards for Wildland Fire Module Operations (PMS 430) for additional information.

WFM Availability Periods
WFMs will have minimum availability periods as defined in the ISWFMO. Availability for Type 1 WFMs may exceed the minimum period defined. Type 1 WFMs will be available for off unit assignment during the designated 90 day availability period. The module leader will inform the local supervisor and the GACC of any changes to the modules availability.

WFM Organization
Individual module structures vary based on local and agency needs using the following standard positions: Module Leader/ Foreman, Assistant Leader/ Foreman, Lead Firefighter, Senior Firefighter, Crewmember.

- **BLM** – BLM WFM will meet standards identified in the Interagency Standards for Wildland Fire Module Operations NWCG Standards for Wildland Fire Module Operations (PMS 430). In addition, BLM WFM will meet the following requirements:
  - All BLM WFM will meet the standards for Type 1 WFM identified in the Interagency Standards for Wildland Fire Module Operations, Type 2 WFM will not be formed, sponsored, or status in the Resource Ordering and Status System (ROSS) by BLM units.
  - Approval from the Assistant Director, Fire and Aviation is required prior to establishing and/or status in new Type 1 WFM.
  - Any BLM unit may provide personnel to WFM sponsored by another agency. All BLM personnel must meet the standards outlined in the Interagency Standards for Wildland Fire Module Operations, and the Interagency Standards for Fire and Fire Aviation Operations.
  - Units may utilize Type 1 and/or Type 2 WFM for BLM incidents. Incident commanders will order the appropriate resource to accomplish incident objectives.
  - Fire Suppression Modules and WFM are separate and distinct resources. The BLM has established standards for fire suppression modules in Chapter 2 of this publication. Fire managers and incident commanders should order the appropriate resource to accomplish incident objectives.

- **NPS** – Modules are coordinated regionally and mobilized/demobilized through established ordering channels through the GACCs.

---

### Chainsaw Operators and Fallers

In 2014, NWCG established faller qualifications in the NWCG PMS 310-1. Agencies have established additional evaluation and certification requirements:

- **BLM/NPS/FWS/BIA** - Use of the NWCG position task books is required. The requirements for final evaluators for each position are as follows:
○ The individual tasks required for completion of the FAL3 PTB must be evaluated by a qualified FAL2 or FAL1. The Final Evaluator’s Verification for a FAL3 trainee must be completed by a qualified FAL2 or FAL1.

○ The individual tasks required for completion of the FAL2 PTB must be evaluated by a qualified FAL2 or FAL1. The Final Evaluator’s Verification for a FAL2 trainee must be completed by a qualified FAL2 or FAL1.

○ The final certification of all wildfire faller positions will remain the responsibility of the IQCS Certifying Official.

○ All wildfire saw operation qualifications are maintained through the IQCS system and displayed on the Incident Qualification Card.

  ▪ BLM – The individual tasks required for completion of the FAL1 PTB must be evaluated by a qualified FAL1. The Final Evaluator’s Verification for a FAL1 trainee must be completed by a qualified FAL1 Evaluator. Each BLM State Fire Management Officer will certify and maintain a list of their current FAL1 Evaluators.

  ▪ NPS/BIA – The individual tasks required for completion of the FAL1 PTB must be evaluated by a qualified FAL1. The Final Evaluator’s Verification for a FAL1 trainee must be completed by a qualified FAL1.

  ▪ FWS – Follow evaluator qualification requirements listed in the FAL1, FAL2, and FAL3 position task books.

• FS – Use of the NWCG combined position task book for FAL1, FAL2, and FAL3 is not authorized for Forest Service use. Forest Service sawyers will continue to use agency specific certification processes outlined in Forest Service Manual 2358.

  ○ Sawyers shall not use saws outside the limits of their certification or qualifications, except during formal evaluation proceedings or under the immediate supervision of a higher qualified sawyer.

  ○ All sawyers must comply with FS policy and the FSFAQG requirements for FAL3, FAL2, or FAL1 to operate a chainsaw or crosscut saw on a wildland fire incident. Requirements include:
    ▪ Possess a current first aid and CPR certification (FSH 6709.11, sec 52.3).
    ▪ Initially complete a Nationally Recognized Sawyer Training Course (Wildland Fire Chain Saws, S-212).
    ▪ Completion of a field proficiency evaluation with appropriate saw operator skill level along with restrictions (if any) noted on their National Sawyer Certification Card.

  ○ The National Sawyer Certification Card is valid for 3 years and is subject to review any time prior to expiration. Minimum requirements for sawyer training and field proficiency reevaluation include:
    ▪ Completion of a knowledge refresher (classroom or field) and a field proficiency evaluation equivalent to the initial evaluation.
Sawyer Instructors are required to be recertified by instructing at least one NRSTC or refresher NRSTC every three years.

- FS sawyers may function as evaluators for partner agencies using the FAL3 and FAL2 position task book.
- Fallers who are certified or recertify after October 1, 2014 will be required to be certified in progression (i.e., must be FAL3 to be FAL2). However if the initial evaluation is FAL2 the account manager shall grant the position competency for FAL3. Those certified initially as FAL1 will have position competencies for FAL2 and FAL3 granted.
- FS will accept other agency chainsaw certifications on incidents occurring on FS lands provided they meet NWCG minimum standards.
- FS will accept a transferring employee’s faller qualification if it was certified following the PMS 310-1 standard.

- **BIA** – Use of FAL1, FAL2 and FAL3 PTBs is mandatory and not up to unit discretion.

- ### The FAL1 that needs to be recertified every 3 years may be recertified by other agencies.
- BIA will accept other agencies FAL1 credentials upon hire.
- Emergency Firefighter (AD) Chainsaw Operators – Chainsaw training is authorized for AD employees who are required to operate chainsaws for fire suppression or hazardous fuels reduction project work. Supervisors of Type 2 and Type 2 IA crews who have employees who operate chainsaws must have emergency medical response capabilities. The possession of emergency response capabilities can be fulfilled through one of the following two options: 1) Crews will minimally possess one or more individuals who are currently certified to administer CPR and provide first aid. 2) If the crew does not possess this capability, other provisions must be made by the supervisor to provide these services while engaged in chainsaw operations.
Chapter 14
Firefighting Equipment

Introduction
The agency wildland fire program equipment resources include engines, dozers, water tenders, and other motorized equipment for fire operations.

Policy
Each state/region will comply with established standards for training, equipment, communications, organization, and operating procedures required to effectively perform arduous duties in multi-agency environments and various geographic areas.

Approved foam concentrate may be used to improve the efficiency of water, except near waterways where accidental spillage or over spray of the chemical could be harmful to the aquatic ecosystem, or other identified resource concerns.

Firefighting Engine/Water Tender Common Standards

Driving Standard
Refer to driving standards in Chapter 7.

- **BIA** – Refer to Chapter 6 for BIA Specific Motor Vehicle Policies. BIA and DOI policy requires all personnel who operate a vehicle with a Gross Vehicle Weight (GVW) over 26,000 pounds to have a valid CDL.

Engine/Tactical Water Tender Water Reserve
Engine/tactical water tender operators will maintain at least 10 percent of the pumpable capacity of the water tank for emergency engine protection and drafting.

Chocks
At least one set of wheel chocks will be carried on each engine/water tender and will be properly utilized whenever the engine is parked or left unattended. This includes engine/water tender operation in a stationary mode without a driver “in place.”

Fire Extinguisher
All engines/water tenders will have at least one 5 lb. ABC rated (minimum) fire extinguisher, either in full view or in a clearly marked compartment.

Nonskid Surfaces
All surfaces will comply with National Fire Protection Association (NFPA) 1906 Standard for Wildland Fire Apparatus requirements.
First Aid Kit
Each engine/water tender shall carry, in a clearly marked compartment, a fully equipped 20-25 person first aid kit.

- **BLM** – Fire First Response Kits will be carried in all Working Capital Fund 600-series fire vehicles (excluding trailers).

Gross Vehicle Weight (GVW)
Each engine and water tender will have an annually certified weight slip in the vehicle at all times. Weight slip will show individual axle weights and total GVW. Operators of engines and water tenders must ensure that the maximum certified gross vehicle and axle weight ratings are never exceeded, including gear, personnel, and fuel. The NFPA 1906 standard of 250 pounds per seat position for each person and their personal gear will be used to calculate the loaded weight.

- **FS** – Refer to FSH 7109.19, Chapter 30 for calculation of Rough Road Factor reduction for driving on rough or unsurfaced roads.

Speed Limits
Posted speed limits will not be exceeded.

Lighting
Headlights and taillights shall be illuminated at all times while the vehicle is in motion. All new orders for fire engine apparatus will include an overhead lighting package in accordance with agency standards. Lighting packages will meet NFPA 1906 standards at the time of manufacture. Engines currently in service may be equipped with overhead lighting packages. A red, white, and amber combination is the accepted color scheme for fire.

Emergency Light Use
Emergency lighting will be used only during on site wildland fire operations or to mitigate serious safety hazards. Overhead lighting and other emergency lighting must meet state code requirements, and will be illuminated whenever the visibility is reduced to less than 300 feet.

- **BLM/NPS /BIA** – See agency chapters or policy for specific guidance.
- **FWS** – Refer to Service policy 621 FW 1.
- **FS** – See FSM 5120, FSM 5130, and FSH 5109.16 for red lights and siren policy.

Fire Equipment Maintenance and Inspections
Apparatus safety and operational inspections will be accomplished either on a post-fire or daily basis. Offices are required to document these inspections. Periodic maintenance (as required by the manufacturer) shall be performed at the intervals recommended and properly documented. All annual inspections will include a pump performance test to ensure the pump/plumbing system is operating at desired specifications (pressure and gallons per minute).

Release Date: January 2020
Mobile Attack (Pump and Roll)
Firefighters must be seated and belted within an enclosed cab or walk alongside the apparatus during mobile attack (pump and roll) operations. Riding, standing or seated on the exterior of the apparatus is prohibited. Utilization of the NFPA 1906 “on-board pump-and-roll fire-fighting position” if equipped, is not permitted.

Firefighting Engines

Operational Procedures
All engines will be equipped, operated, and maintained within guidelines established by the Department of Transportation (DOT) and regional/state/local operating plans. All personnel assigned to agency fire engines will meet all gear weight, cube, and manifest requirements specified in the National Interagency Mobilization Guide.

Engine Typing
Engine typing and respective standards have been established by NWCG (reference the Wildland Fire Incident Management Field Guide (PMS 210), Chapter 4).

Fire Engine Staffing

For Type 4, 5, 6, and 7 engines, minimum staffing is two individuals one of which is Engine Boss qualified.

For Type 3 engines, minimum staffing is three individuals, including an Engine Boss.

- **BLM** – For BLM engine staffing requirements see Chapter 2.
- **NPS** – For NPS engine staffing requirements see Chapter 3.

Engine Inventories

An inventory of supplies and equipment carried on each vehicle is required to maintain accountability and to obtain replacement items lost or damaged on incidents. Refer to agency-specific requirements regarding standard inventory for engines.

- [BLM](https://web.blm.gov/internal/fire/fire_ops/engine_policy.htm)
- [FWS](https://fmh.gov/FireDepartment/EnginePolicy)

Water Tenders

Water Tender Typing

Water tender typing and respective standards have been established by NWCG (reference the *Wildland Fire Incident Management Field Guide* (PMS 210), Chapter 4).

Water Tender Qualifications and Staffing Standards

- **Water Tender (Non-Tactical)**
  - Qualifications: CDL (tank endorsement)
  - **BLM** – Refer to the Federal Wildland Fire Qualifications Supplement.
  - Staffing: A water tender (non-tactical) may be staffed with a crew of one driver/operator when it is used in a support role as a fire engine refill unit or for dust abatement. These operators do not have to pass the Work Capacity Test (WCT) but are required to take annual refresher training.
### BLM – A WCF class 669 non-tactical water tender may be staffed with a crew of one driver/operator when it is used in a support role as a fire engine refill unit or for dust abatement. These operators will pass the moderate Work Capacity Test (WCT), take BL-300/RT-301 and annual refresher training, and possess a CDL with tank endorsement and air brake endorsement (if applicable).

**Water Tender (Tactical)**

Tactical use is defined as “direct fire suppression missions such as pumping hoselays, live reel use, running attack, and use of spray bars and monitors to suppress fires.”

- Qualifications:
  - **BLM** – ENOP, CDL (tank endorsement)
  - **NPS/FWS** – ENGB, CDL (tank endorsement)
  - **FS** – FFT1, CDL

- Staffing: Tactical water tenders will carry a minimum crew of two:
  - **BLM** – One ENOP and one FFT2. All WCF class 668 super-heavy tactical water tenders (2 seats, Tatra chassis, volume pump rated at 250 GPM and 150 PSI or better) will be minimally staffed with an Engine Boss and FFT. All WCF 669 tactical water tenders will be staffed with one ENOP and one FFT2.
  - **NPS/FWS** – One ENGB and one FFT2.
  - **FS** – One FFT1 and one FFT1/FFT2.

---

**Dozers/Tractor Plows**

**Dozer/Tractor Plow Training and Qualifications**

Agency wildland fire dozers/tractor plows will be staffed with personnel that meet the training and experience standards for Dozer Operator (DZOP) or Dozer Operator Initial Attack (DZIA) per the Federal Wildland Fire Qualifications Supplement. While on fire assignments, all operators and support crew will meet PPE requirements.

**Dozer/Tractor Plow Operational Procedures**

- Agency owned and operated dozer/tractor plows will be equipped with programmable two-way radios, configured to allow the operator to monitor radio traffic.
- Agency and contract dozer/tractor plows will have agency supplied supervision when assigned to any suppression operations.
- Contract dozers must be provided with radio communications, either through a qualified Heavy Equipment Boss (HEQB) or an agency-supplied radio. Contract dozer/tractor plows will meet the specifications identified in their agreement/contract.
• Operators of dozer/tractor plows and transport equipment will meet DOT certifications and requirements regarding the use and movement of heavy equipment, including driving limitations, CDL requirements, and pilot car use.

All-Terrain Vehicles (ATV)/Utility Terrain Vehicles (UTV)

The operation of ATV/UTVs can be high risk. The use of ATV/UTVs should be evaluated to ensure that use is essential to accomplish the mission, rather than for convenience.

• **BLM** – BLM personnel will not use ATVs for any wildland fire management activity including preparedness, suppression, prescribed fire, hazardous fuels reduction, post-fire rehabilitation, and emergency stabilization and restoration, regardless of incident jurisdiction or project/activity location after January 1, 2018. State Directors, Assistant State Directors and the Director, National Operations Center have the authority to approve exceptions to this policy on a case-by-case basis. All requests for exceptions must be in writing and will include:
  ○ A description of how the ATV is essential for the performance of official duties;
  ○ Analysis of the alternatives that were considered;
  ○ Justification for an ATV being the only viable alternative; and
  ○ Concurrence by the applicable Field Manager, District Manager, District Safety Manager, and the State /Center Safety Manager.
Cost is not a basis for approval of an exception and no exceptions may be made to the existing ban on industrial use of ATVs.

• **BIA** – Effective immediately, all BIA programs will cease the procurement of ATVs used for wildland fire management activities (including preparedness, suppression, prescribed fire, hazardous fuels reduction, post-fire rehabilitation, and emergency stabilization and restoration). After this date, BIA personnel will not utilize ATVs for any wildland fire management activities, regardless of incident jurisdiction or project/activity location.

• **BIA** – Programs may continue to procure and utilize other commercially available utility terrain vehicles (UTVs), provided the vehicle has manufactured-installed seat belts, a steering wheel, is a multi-seat or newly available single-seat model and is equipped with a certified roll-over protection structure (ROPS) designed and installed by the original equipment manufacturer as standard equipment.

• **BLM/BIA** – Employees of cooperating agencies/entities may utilize ATVs on BLM/BIA incidents if allowed by their individual agency/entity policy.

Because of the high risk nature, agencies have developed specific operational policy (refer to current agency policy). ATV/UTV operators will meet the training and certification requirements of their agency; employees certified by their agency will be considered qualified ATV/UTV operators regardless of
incident jurisdiction. Common policy requirements for wildland fire operations are highlighted below:

- A JHA/RA must be completed and approved by the supervisor prior to vehicle operation.
- All personnel authorized to operate an ATV/UTV must first complete agency specific or manufacturer-provided training in safe operating procedures and appropriate PPE.

  - **BLM** – **###** UTV instructors must complete the Recreational Off-Highway Vehicle Association (ROHVA) Instructor course. BLM offices may use either UTV training that is commercially available from the Recreational Off-Highway Vehicle Association (ROHVA), or continue to use the current version (8/2018) of the BLM UTV Operator Field Training Range Cards to train their employees who use UTVs. If offices choose to use ROHVA’s Driver Course, they must continue to train employees on UTV loading/unloading, trailer use, and winch operations as prescribed in lesson plans eight through ten of the BLM UTV range cards prior to employees engaging in these activities. This change does not affect the requirement for UTV riders to complete the DOI Talent course, “Introduction to Utility Terrain Vehicle Operation” as a pre-requisite to the field training provided by either ROHVA or the BLM range cards.

- **Re-evaluation/Re-certification** – Operators shall be re-evaluated every three years. Infrequent users (less than 16 hours of riding a year) shall have a check ride prior to scheduled use of an ATV/UTV.

- **Specific authorization for ATV/UTV use is required** – All ATV/UTV operations must hold a valid Motor Vehicle Operator’s Identification Card, OF-346 or agency equivalent.

  - **BLM** – Upon completion of UTV training and operator certification requirements, UTV Operator (UTVO) will be placed on the employee’s Incident Qualification and Certification (IQCS) Card (Red Card). IQCS Certifying Officials are responsible for verifying that UTV operator qualifications are current, and that the UTVO qualification is removed from the Red Card if training, certification, or currency requirements lapse.

  - **NPS/FWS** – Upon completion of agency-specific ATV/UTV training and operator certification requirements, All-Terrain Vehicle Operator (ATVO) will be placed on the employee’s Incident Qualification and Certification (IQCS) Card (Red Card). IQCS Certifying Officials are responsible for verifying that ATV/UTV operator qualifications are current, and that the ATVO qualification is removed from the Red Card if agency-specific training, certification, or currency requirements lapse.

  - **NPS** – All Off-Highway Vehicle (OHV) operators (including ATV/UTV) must hold a valid state Motor Vehicle Operator’s Permit. Operating restrictions identified on the operator’s permit must be
adhered to while operating an OHV (e.g., use of corrective lenses, etc.). NPS ATV operators must be qualified at either the Basic or Advanced Level as described in RM-50B depending on the hazard potential of the operation. All ATV operators shall be provided refresher training each year in accordance with a JHA and reevaluated by an ASI Certified Trainer every 3 years. The reevaluation shall be documented. RM-50B, Appendix B (ATV Operator Accountability/Certification Tracking Record) may be used to document the reevaluation. Further information on ATV/UTV use is found in RM-50B.

○ BIA – Upon completion of UTV training and operator certification requirements, Utility Terrain Vehicle Operator will be placed on the employee’s Incident Qualification and Certification (IQCS) Card (Red Card). IQCS Certifying Officials are responsible for verifying that UTV operator qualifications are current, and that the UTV qualification is removed from the Red Card if training, certification, or currency requirements lapse.

• ATVs can only have a single rider—passengers are prohibited even if ATV is designed for two riders.
• UTVs passengers are limited to the number of seats installed by manufacturer. The operator and passenger(s) must use seatbelts while the vehicle is in motion.
• Operators must use required PPE while loading/unloading ATV/UTV.
• Cargo loads shall be loaded and secured as to not affect the vehicle’s center of gravity, and shall not exceed manufacturer’s recommendations for maximum carrying capacity; and
• When transporting external fuel containers with a UTV/ATV, a 5 lb. class BC fire extinguisher must be secured to the UTV/ATV.

Required PPE

ATV Head Protection for Wildland Fire Operations

• ATV helmets must be worn at all times during ATV operations (on and off the fireline); and
• ATV helmets must meet Snell SA2010, SA2015, or DOT certification.
  ○ A ¾ face model meeting Snell SA2010, SA2015 certification is acceptable for use.
  ○ Use of half “shorty” helmets requires a JHA/RA for fireline use and must include justification for its use. Refer to MTDC Tech Tip publication, A Helmet for ATV Operators with Fireline Duties (0651-2350-MTDC).

UTV Head Protection for Wildland Fire Operations:

• Helmets must meet DOT, ANSI Z90.1; or Snell SA2010, SA2015 certification unless:
○ UTV is used for low speeds and smooth travel surfaces, administrative use (e.g., campgrounds, incident base camps) UTV operators are not required to wear ### hardhats or helmets; or
○ UTV is equipped with approved Rollover Protection System (ROPS), and:
  ▪ **BLM** – A comprehensive and properly prepared RA of the specific conditions demonstrates no more than a medium residual risk level, then a ### hard hat helmet meeting NFPA 1977 or ANSI Z 89.1 2009 Type 1, Class G standards standard may be worn with chin strap secured in place under chin.
  ▪ **NPS** – Approved helmets are required for UTV operations that are rated moderate (amber) or high (red) using the “ORV Risk Assessment Tool” included in the NPS Off-Highway Vehicle Policy.
  ▪ **FWS** – Per 243 FW 6.6 B.l, a hardhat meeting NFPA 1977 or ANSI Z 89.1 standards may be worn with chin straps secured in place unless the risk assessment for the operation dictates wearing a securely fastened motorcycle helmet.
  ▪ **FS** – UTV Helmet (for fire use) – ### Helmets must have Snell SA certification. must meet the policy within the Safety Handbook (6709.11), Chapter 70, 71.12; Exhibit 01 states “Specialized Equipment, such as ATVs, UTVs, Dirt Bikes, Snowmobiles (Department of Transportation-approved helmet).” Wearing hardhats while driving or riding on a UTV is not allowed. Forest Service policy provides no exception to the helmet requirement for low speeds, smooth travel surfaces, or administrative use. UTV Helmet (for fire use) requirements are the same as ATV use. Helmets must meet Snell, or DOT ANSI certification. A ¾ face model meeting Snell or DOT certification is acceptable for use. Use of half “shorty” helmets requires a JHA/RA for fireline use approved by the Incident Commander or relevant Line Officer and must include justification for its use. Refer to MTDC Tech Tip 5 publication, A Helmet for ATV Operators with Fireline Duties (0651-6 2350-MTDC).
  ▪ ### **BIA-UTV Helmet (for fire use) must be worn. Helmets must meet DOT, ANSI Z90.1: or Snell SA2010, SA2015 certification. Hardhats are not approved for Wildland Fire Operations (non-admin use).**

Eye protection (goggles, face shield, or safety glasses) based upon JHA/RA:
  • Eye protection is not required for a UTV equipped with an original manufacturer windshield that protects the face from branches, flying debris, etc., unless otherwise required by an associated industrial use activity or JHA/RA.

If operating ATV/UTV on the fireline, the following are required:
• Leather or leather/flame resistant combination gloves. Flame resistant flight gloves or NFPA 1977 compliant Driving Gloves can be used by heavy equipment operators, drivers and fireline supervisors when not using fireline hand tools.

• National Fire Protection Association (NFPA) 1977 compliant long-sleeved flame resistant shirt (yellow recommended).

• NFPA 1977 compliant flame resistant trousers.

• Wildland fire boots.

• Appropriate head protection as described above.

○ FS – Shirt, trousers, and gloves used by USFS personnel must meet Forest Service specification 5100-91 (shirt), 5100-92 (trousers), 6170-5 (gloves), or be NFPA 1977 compliant.

ATV/UTV operator shall carry a personal communication device (e.g., two-way radio, cellular phone, or satellite phone).

All other ATV/UTV specific guidance is found in the respective agency’s policy:

Vehicle Cleaning/Invasive Species Prevention

Refer to Chapter 11 for guidance on minimizing potential transmission of invasive species.

Incident Remote Automated Weather Stations

Incident Remote Automated Weather Stations (IRAWS – NFES 5869) are readily deployable, portable weather stations that may be utilized in unprepared locations to monitor local weather conditions. IRAWs are intended for use on or near the fireline or at other all-hazard incidents, and are installed by NIFC technicians and operated as desired by Fire Behavior Analysts (FBAN) and/or Incident Meteorologists (IMET) to record and distribute real time weather data.

National resource IRAWs systems are cached at the National Interagency Fire Center (NIFC) and may be ordered through standard equipment resource ordering systems. Following release from an incident, these stations must be returned to the Remote Sensing/Fire Weather Support Unit (RSFWSU) at NIFC for maintenance, recalibration, and redeployment.
Aerial Ignition Devices

Information on types of aerial ignition devices, operational guidelines, and personnel qualifications may be found in the *NWCG Standards for Aerial Ignition* (PMS 501) available at https://www.nwcg.gov/publications/501.

Ground Ignition Devices and Transporting/Dispensing Fuel

For ground ignition devices, follow the *Interagency Ground Ignition Guide* (PMS 443) for operational guidelines, personnel qualifications, and equipment selection. https://www.nwcg.gov/publications/443

- **BLM** – A 10 lb. class BC fire extinguisher is required for UTVs equipped with a ground ignition device.

For transporting and dispensing fuel, follow the *Interagency Transportation Guide for Gasoline, Mixed Gas, Drip-Torch Fuel, and Diesel* (PMS 442) found at https://www.nwcg.gov/publications/442 or agency-specific guidance.

- **BLM** – Effective May 1, 2019, all drip torches must meet United States Forest Service (USFS) specification 5100-614.
- **NPS** – Follow the Forest Service standard for military style jerrican (UN 3A1) (PMS 442, page 8).
- **FS** – Direction is found in FSH 6709.11.
Chapter 15
Communications

Policy
Agency specific policies for radio communications may be found in:

Dispatch Recording Devices
Recording of phone calls without all party’s prior knowledge and consent is not permitted. Recording of radio traffic is appropriate.
- **BLM** – Radio recording devices will be used by BLM dispatch offices or any interagency office dispatching BLM resources.

Cellular/Satellite Phone Communications
Cellular/satellite telephones will not be used to communicate tactical or operational traffic unless no other means are available. Cellular/satellite telephones will not be used for flight following in lieu of normal flight following procedures. Telephone communications may be used for logistical purposes.
Refer to Chapter 7 for policy regarding use of mobile devices while operating a vehicle.

Radio Communications
Radio communications provide for the information needed for the command/control and safety of personnel and resources.

Radio Contracts
Radios used for fire and aviation activities must be approved by the National Interagency Incident Communication Division (NIICD). Information on contracts, software, hardware requirements and approved radios is available at https://www.nifc.gov/NIICD/documents.html, or contact your agency Telecommunications Department or the National Interagency Fire Center Communications Duty Officer (NIFC CDO) at (208) 387-5644.
- **BLM** – For information on BLM contracts, software, and hardware requirements and approved radios, contact the Branch of Radio Operations (FA-332) at ### (208) 387-5830 (208) 387-5881.
Radio Frequency Management

In accordance with Executive Order 13556 and USDA/DOI policies and guidelines, all documents with USDA/DOI frequencies that involve the safety of life and property must be labeled in accordance with Department of Defense (DOD) 8500E, National Institute of Standards and Technology (NIST) 800-53 and the National Archives CUI Marking Handbook v1-1.

Therefore, any documents containing frequency information dealing with life and/or property, whose dissemination is not controlled with a password, must be labeled at the top and bottom of each page with, Controlled Unclassified Information//Basic and controlled as such.

Frequency Modulated (FM) and Amplitude Modulated (AM) frequencies are approved and assigned by a designated Washington Office frequency manager and managed by state and local Communications Officers. Frequencies shall not be transmitted without written permission from formally appointed frequency management personnel at the local, state, regional, or national level.

Radio interference must be reported to NIFC CDO (or COMC when assigned) when adversely impacting incident communications. Minimum reporting information: location, radio frequency, time and date (including interference duration), and sound or source for interference.

### Daily and Initial Attack Operational Frequency Management

Daily, Initial Attack and Airtanker Base Frequency Management

Frequency assignments for normal daily and initial attack operations are made on a permanent basis and are requested through the normal Radio Frequency Authorization process from the local, state, regional or national level designated frequency management personnel.

Air operations initial attack frequencies, both AM and FM, are assigned by the FAA and departmental frequency managers. These interagency assignments are coordinated with the Geographic Area Coordination Centers (GACCs) by the NIICD CDO. For air operations the NIFC CDO coordinates annually with the Forest Service, and Department of Interior (DOI) Frequency Managers to provide initial attack (IA) air-to-ground (A/G) FM frequencies, and with the Federal Aviation Administration (FAA) to provide IA A/A AM and Airtanker Base frequencies.

IA A/G FM frequencies are carefully engineered for use by Forest Service and DOI frequency managers to ensure that the frequencies will not cause interference to, or, receive interference from, other licensed users. These frequencies are authorized for use only within their assigned frequency zone boundaries. Any use of these frequencies outside of the frequency zone boundaries may cause interference with other authorized users and will be considered a safety violation in regards to the protection of life and/or property.

Controlled Unclassified Information//Basic
and could have major consequences. Therefore, any changes to dispatch areas
that result in being responsible for areas outside of the existing frequency
boundaries must result in a coordinated effort between dispatch centers,
ensuring that only frequencies assigned within the appropriate frequency zone
are used.

On an annual basis the FAA engineers Airtanker Base frequencies and IA A/A
AM frequencies for use by the wildland fire community. The Airtanker Base
frequencies are engineered for use within a 40 nautical mile radius (unless
otherwise specified) from the base center point and the IA A/A AM frequencies
are engineered for use only within their assigned frequency zone boundaries.
Both are designed for use below 5,000 feet above ground level (AGL). These
frequencies are engineered by the FAA to minimize the risk of causing
interference with civilian aircraft or airports located within the same geographic
areas. Any use of these frequencies outside of the provided service volume is
considered a major safety violation by the FAA and may result in the removal of
and/or denial of use for those frequencies.

All initial attack frequency assignments are depicted on maps disseminated
annually by the CDO through the FTP site. For access to the FTP site contact the
CDO Office.

Mutual Aid Frequency Management

Mutual aid frequency sharing agreements can be made at the local level.
Agreements are only approved in the specific location where assigned.

Prohibited:
- Use of mutual-aid-frequency outside assigned area; and
- Formal agreements for mutual-aid using NIFC National Fire Frequencies.
Exception:

- Agency with Radio Frequency Authorization (RFA) approved by National Telecommunications Information Agency (NTIA) for frequency in NIFC Channeling Plan; notification and coordination with NIFC CDO required.

### Incident Frequency Management

National level coordination and assignments of incident frequencies is the responsibility of the National Interagency Incident Communications Division (NIICD) and is performed by the NIFC CDO.

When communications requirements exceed normal operations, the NIFC CDO may request that GACCs assign a Communication Coordinator (COMC) to facilitate geographic area frequency management. Additional information is in the *National Interagency Mobilization Guide*.

- Frequencies for Type 1 and 2 incidents are assigned by the NIFC CDO and are managed by a qualified Communications Unit Leader (COML). The COML will request, assign, and report all frequencies used on the incident to the NIFC CDO/COMC. This will include the request and assignment of all aircraft frequencies. Frequency use will be documented on the ICS-205 (Incident Radio Communications Plan) and on ICS-220 (Air Operation Summary) forms. These completed forms will be made available to incident personnel in the Incident Action Plan (IAP).

- Type 3 incidents, or other incidents that do not have an assigned COML, will coordinate and request all frequency and communication equipment needs through the COMC and/or the NIFC CDO.

If additional frequencies are required, the COML will order them through the established ordering process.

Additional frequencies may be available on a temporary basis, and may be requested by the NIFC CDO from the Washington Office Spectrum managers when:

- The NIICD national frequencies are all committed within a specific geographic area; and/or
- New incidents within a complex create a need for additional frequencies; and/or
- The fire danger rating is extreme and the potential for additional new incidents is high; and/or
- There is frequency congestion due to incidents in close proximity.
Aviation Operations Frequency Management

- Air-to-Air initial attack – AM frequencies are assigned yearly to the GACCs by the NIFC CDO in coordination with the Federal Aviation Administration (FAA). Once assigned to the zones, management of those frequencies is the responsibility of the GACC. Frequencies allocated to zones for initial attack are not to be dedicated for project fire use. If additional frequencies are required, they must be requested from and assigned by the NIFC CDO.
- Air-to-Ground – FM frequencies will be assigned by agency frequency managers and coordinated by the NIFC CDO.

Both AM and FM aviation frequency assignments will be used on an interagency basis and a master record of these assignments is maintained by the NIFC CDO. Updated frequency information is coordinated annually with the GACCs.

Pre-assigned National Frequencies

National Air Guard Frequency (168.6250 MHz)

A National Interagency Air Guard frequency will be used for emergency aviation communications. Continuous monitoring of this frequency is mandatory by agency dispatch centers and aircraft. A Continuous Tone Coded Squelch System (CTCSS) tone of 110.9 Hz must be used when transmitting on the National Air Guard Frequency. This frequency must be programmed into the last channel of every group in fire handheld radios.

This frequency, 168.6250 MHz is only used for:
- Air-to-air emergency contact and coordination;
- Ground-to-air emergency contact; and
- Initial call, recall, and re-direction of aircraft when no other contact frequency is available.

National Flight Following Frequency (168.6500 MHz)

The National Flight Following Frequency is used to monitor interagency and contract aircraft. All aircraft on point-to-point or mission flights should establish/terminate flight following, and confirm Automated Flight Following (AFF) on the National Flight Following frequency.

The National Flight Following frequency is to be used for flight following, dispatch, or redirection of aircraft. No other use is authorized. No other uses, including tactics and logistics, are authorized.

All dispatch centers/offices will monitor the national flight following frequency at all times. A CTCSS tone of 110.9 must be used when transmitting and receiving on the National Flight Following frequency.

Controlled Unclassified Information/Basic

Release Date: January 2020
National Interagency Air Tactics Frequencies (166.6125 MHz, 167.9500 MHz, 169.1500 MHz, 169.2000 MHz, 168.4000 MHz)

- Frequencies used to support air-to-air or ground-to-air communications on incidents west of the 95th meridian.
- Used for air-to-air and ground-to-air communications only.
- Aircraft radio transmitter power output limit: 10 watts.
  - Prohibited:
    - Use as ground tactical operational channel
    - Use in base station and/or repeater

These frequencies will be assigned by the NIFC CDO or in coordination with the local unit if a NTIA-RFA is approved.

National Interagency Airtanker Base Frequencies

The National Interagency airtanker base frequencies are engineered and assigned by the FAA frequency managers on a yearly basis. Each frequency is restricted to a service volume of a 40 nautical mile radius and 10,000 feet mean sea level (MSL) or 5,000 feet above ground level (AGL) from the specified latitude and longitude of the airtanker base as annotated in the National Airtanker Base Directory. NO other frequencies are authorized for this use.

Smokejumper and Rappel/RADS Air-to-Ground Frequency (168.5500 MHz)

Assigned to Smokejumpers for DOI, USDA and other agencies. Specifically dedicated as a smokejumper national air-to-ground tactical channel. Secondary use is authorized for BLM and USFS Rappel/rope Assisted Delivery System (RADS) aerial delivery operations. Channel must be toned on both transmit and receive for all smokejumper and RADS teams to insure that interference issues are avoided. Smokejumpers will use tone 123.0 and RADS will use 110.9. Use of this frequency other than for the delivery of aerial firefighters is prohibited.

Government-wide Area Common User Frequencies (163.1000 MHz, 168.3500 MHz)

These shared frequencies are used on a non-interference basis and are not exclusive to any user. These frequencies are not to be used for air-to-ground operations and are prohibited by DOI and USDA from use as a frequency during operations involving the protection of life and property.

- NOTE: When traveling between incidents, be sure to monitor for incident radio traffic in the area before using these frequencies.
National Interagency Fire Tactical Frequencies (168.0500 MHz, 168.2000 MHz, 168.6000 MHz, 168.2500 MHz, 166.7250 MHz, 166.7750 MHz)

These shared frequencies are approved for ground tactical operations (line of sight) on incidents.

Prohibited Use:
- Air-to-air communications; and
- Air-to-ground communications.

Permission to use these frequencies requires prior approval from the NIFC CDO (or COMC when mobilized).

Incident Radio Support

All National Incident Radio Support Cache (NIRSC) communications equipment will be returned to NIFC immediately after the incident is turned over to the local jurisdictional agency unless otherwise coordinated with the NIICD CDO/COMC.

No NIRSC communications equipment shall be moved from one incident to another without being first returned to NIRSC for refurbishment. Unused and sealed equipment may be moved, but only upon approval of the NIFC CDO or COMC.

Military Communications on an Incident

Military units assigned to an incident are provided NIRSC communications equipment. Each battalion is typically assigned 80 handheld radios. Intercrew communications within a military unit is provided by the military on their radios and frequencies. All incident frequencies are assigned by the COML using form ICS-205.

Some military units have aviation VHF-FM radios compatible with civilian systems. Other units must be provided VHF-FM radios prior to dispatch to an incident. Wiring harnesses and radios will be resource ordered by the incident. The resource order will include a request for qualified personnel from NIICD to perform the installation of the equipment. Equipment will not be sent without qualified personnel to install it.
Chapter 16
Aviation Operations and Resources

Purpose and Scope

Aviation resources are one of a number of tools available to accomplish fire related land management objectives.

Aviation use must be prioritized based on management objectives and probability of success.

The effect of aviation resources on a fire is directly proportional to the speed at which the resource(s) can initially engage the fire, the effective capacity of the aircraft, and the deployment of ground resources.

These factors are magnified by flexibility in prioritization, mobility, positioning, and utilization of the versatility of many types of aircraft.

In addition to the priorities listed in the National Interagency Mobilization Guide, Chapter 10 under headings “Total Mobility” and “Priorities”, mobilization of aircraft should be based on optimizing the use of exclusive-use contracted aircraft. Call-when-needed aircraft will be the last ordered and the first released. The exception to this is use for initial action response and capability.

Risk management is a necessary requirement for the use of any aviation resource. The risk management process must include risk to ground resources, and the risk of not performing the mission, as well as the risk to the aircrew.

Organizational Responsibilities

National Office – Department of Interior (DOI)

Office of Aviation Services (OAS)
The Office of Aviation Services (OAS) is responsible for the coordination of aviation policy development and maintenance management within the agencies of the Department of the Interior (DOI). The OAS has no operational responsibility. The OAS provides aviation safety program oversight, accident investigation, and inspection/approval of aircraft and pilots for DOI agencies.

Bureau of Land Management (BLM)
National Aviation Office (NAO) – NAO develops BLM policy, procedures, and standards. It also maintains functional oversight, and facilitates interagency coordination for all aviation activities. The principal goals are safety and cost-effectiveness. The NAO supports BLM aviation activities and missions. This includes fire suppression, through strategic program guidance, managing aviation programs of national scope, coordination with OAS, and interagency partners. The Fire and Aviation Directorate has the responsibility and authority, after consultation with State Fire Management Officers, for funding and
acquisition of all fire aircraft, prioritizing the allocation of BLM aircraft on a
Bureau wide basis, and approving State Office requests to acquire supplemental
aircraft resources. Refer to BLM National Aviation Plan and Manual 9400 for
aviation policy and guides. Refer to 112 DM 12 for a list of responsibilities.

**National Park Service (NPS)**

The Branch of Aviation develops NPS policy, procedures, and standards for all
fire and non-fire aviation activities. This includes providing guidance on fire
suppression, as well as standardizing aviation programs at the national level,
coordinating with OAS and interagency partners. The Branch of Aviation also
has responsibility for operational execution of the aviation program. The Branch
ensures personnel receive aviation training, provides internal training for fleet
pilots, has responsibility for quality assurance and quality control of park
aviation programs and provides fiscal analysis to determine numbers and types
of aircraft for the bureau.

**Bureau of Indian Affairs (BIA)**

The NAO is responsible for supporting all BIA Aviation programs through an
active and professional aviation organization that:

- Develops and coordinates efficient aviation policy and management
  processes;
- Provides guidance for aviation programmatic and operational risk
  management;
- Leads aviation safety assurance and promotion programs;
- Provides aircraft acquisition support as specified by Indian Affairs
  management objectives; and
- Develops and promotes a skilled aviation management workforce.

**National Office – U.S. Department of Agriculture**

**Forest Service (FS)**

The FS has responsibility for all aspects of its aviation program, including
aviation policy and budget development, aircraft acquisition, aircraft operations,
aviation safety and risk management, budget, pilot standardization, and
airworthiness. In addition, the FS has operational responsibility for functional
oversight of aviation assets and facilities, operational coordination and
utilization, accident investigation, and aircraft and pilot inspection.

The Assistant Director (AD), Aviation, is responsible to the Director of Fire and
Aviation Management for the management and supervision of the National
Headquarters Office in Washington DC, and the detached Aviation Unit
National Office in Boise. The AD, Aviation provides leadership, support and
coordination for national and regional aviation programs and operations. Refer
to FSM 5704 for list of responsibilities.

The Branch Chief, Aviation Operations reports to the AD, Aviation, and is
responsible for national aviation operational management and oversight.
The Branch Chief, Pilot Standardization reports to the AD, Aviation, and is responsible for pilot and aircrew standardization and approval of agency and contract pilots and aircrew.

The Branch Chief, Airworthiness reports to the AD, Aviation, and is responsible for national aircraft airworthiness and maintenance program management and oversight.

The Branch Chief, Aviation Business Operations reports to the AD, Aviation and is responsible for policy maintenance and development, budget development, and planning.

The Aviation Strategic Planner reports to the AD, Aviation and is responsible for strategic planning and reporting.

The Branch Chief, Aviation Safety Management Systems reports to the AD, Risk Management and Training, and is responsible for the national aviation safety and risk management program and oversight.

**State/Regional Office**

- **BLM** – State FMOs are responsible for providing oversight for aircraft hosted in their state. State FMOs have the authority and responsibility to approve, with National Office concurrence, acquisition of supplemental aircraft resources within their state. State FMOs have the authority to prioritize the allocation, pre-positioning and movement of all aircraft assigned to the BLM within their state. State Offices will coordinate with the National Office on movement of their aircraft outside of their State. A State Aviation Manager (SAM) is located in each state office. SAMs are delegated as the Contracting Officers Representative (COR) for all exclusive use aircraft hosted by their state. SAMs implement aviation program objectives and directives to support the agency mission and state objectives. A state aviation plan is required to outline the state aviation program objectives and to identify state-specific policy and procedures.

- **NPS** – A Regional Aviation Manager (RAM) is designated for each Region. RAMs oversee the tactical execution of their region’s aviation programs, provide technical expertise and aviation safety oversight of the parks in their geographic area. RAMs observe regional aviation activities and provide liaison with the national Branch of Aviation and other agencies as appropriate. A Regional aviation operations and management plan is required to outline the Region’s aviation program objectives and to identify Region-specific policy and procedures.

- **FWS** – A Regional Aviation Manager (RAM) is designated for each Region. RAMs implement aviation program objectives and directives to support the agency mission and Region objectives. Several Regions have additional support staff, and/or pilots assigned to support aircraft operations and to provide technical expertise. A Regional aviation operations and management plan is required to outline the Region’s aviation program objectives and to identify Region-specific policy and procedures.
FS – Regional Aviation Officers (RAOs) are responsible for directing and managing Regional aviation programs in accordance with the National and Regional Aviation Management Plans, and applicable agency policy direction. (Refer to FSM 5700 and FSH 5709.16 for list of responsibilities). RAOs report to Director of Fire and Aviation for their specific Region.

Regional Aviation Safety Managers (RASMs) are responsible for aviation safety in their respective Regions, and work closely with the RAO to ensure aviation safety is an organizational priority (refer to FSM 5700 and FSH 5709.16 for list of responsibilities). Most Regions have additional aviation technical specialists and pilots who help manage and oversee the Regional aviation programs. Most Regions also have Aviation Maintenance Inspectors, Fixed-wing Program Managers, Helicopter Program Managers, Helicopter Operations Specialists, Inspector Pilots, etc.

BIA –

○ Provides oversight and approval of the acquisition and use of BIA aircraft within their region;

○ Has the authority to prioritize the allocation, reallocation, pre-positioning and movement of all aircraft assigned to the BIA within their region. All movements will be coordinated with the NAO;

○ Manages and provides oversight of all BIA aircraft assigned to the region;

○ Coordinates with Agencies, Geographical Coordination centers, NAO aircraft coordinators on aviation resources assigned to their region;

○ Ensures all region assigned aviation resources are effectively utilized as efficient BIA resources;

○ Delegates or designates the RAM, who ensures appropriate aviation roles and positions are filled by qualified personnel;

○ Ensures all aviation employees meet DOI and BIA training requirements; and

○ Ensures Inter-agency Agreement (IAA) between region and Office of Aviation Services (OAS) Acquisition Services Directorate (ASD) is valid and in force. Coordinate modifications to IAA as projects and missions dictate.

Local Office

Some areas have interagency aviation programs that utilize an Aviation Manager for multiple units. Duties are similar as other local level managers.

BLM – Unit Aviation Managers (UAMs) serve as the focal point for the Unit Aviation Program by providing technical expertise and management of aviation resources to support Field Office/District programs. Field/District Offices are responsible for hosting, supporting, providing daily management, and dispatching all aircraft assigned to their unit. Field/District Offices have the authority to request additional resources; to establish priorities, and make assignments for all aircraft assigned to the BLM within their unit or zone.
• **NPS** – Unit or Park Aviation Managers have the responsibility to provide aviation expertise and management of aviation resources at each park unit. Organizational responsibility refer to DO-60, RM-60.

• **FS** – Unit Aviation Officers (UAOs)/Forest Aviation Officers (FAOs) have the responsibility for aviation activities at the local level, including aviation mission planning, risk management and safety, supervision, and evaluation. UAOs/FAOs assist Line Officers with risk assessment/management and cost analysis. Refer to FSM 5700 Zero Code for a list of responsibilities.

• **BIA** – The AAM/UAM manages the unit aviation program by providing technical and management direction of aviation resources to support Agency programs. The AAM/UAM has functional responsibility in the following areas:
  ○ The AAM/UAM is authorized to provide for daily management of all aviation resources;
  ○ Ensures Agency flight compliance with USDII/BIA/Region and Agency policies and regulations;
  ○ Develop and implement the Agency/Unit aviation management plan, as well as specific operating plans for other aviation programs (i.e., Helitack, SEAT, and aerial supervision);
  ○ Ensures completion of the Project Aviation Safety Plan (PASP) with appropriate approvals/briefing of Line Officer;
  ○ Ensures that appropriate training is provided to aviation users and supervisors. Monitors aviation training compliance for the Agency/Unit;
  ○ Designates and assigns an alternate aviation manager when needed;
  ○ Ensures that visiting aircrews have received flight crew briefing/aviation orientation and guides;
  ○ Confirms DOI/BIA/OMB requirements are met and completes the cost analysis requirements and schedules the flight with a qualified vendor;
  ○ Ensures the accuracy of the Aircraft Use Report. Processes and maintains copies and records documenting the flight as required by the DOI manual;
  ○ Confirms that a qualified Flight Manager is assigned to all project/resource flights;
  ○ Is responsible for the distribution and use of the Aviation Boundary Plan/Checklist if one is in place;
  ○ Ensures Agency/Unit Aviation Security Plan is current and implemented in accordance with DOI policy;
  ○ May serve as the COR for BIA exclusive use aircraft on their Agency/Unit if aircraft manager is not current or qualified as such;
  ○ Authorized to order approved aircraft utilizing agency procurement documents and procedures. Also establish priorities and allocate all aircraft assigned to the BIA within their unit or zone; and
  ○ Maintains an up to date aviation reference library with all applicable aviation policy and procedural references.
Aviation Information Resources

Aviation reference guides and aids for agency aviation management are listed for policy, guidance, and specific procedural requirements.

- **BLM** – 9400 Manual Appendix 1, National Aviation Plan (NAP) and applicable aviation guides as referenced in the NAP.
- **NPS** – RM-60 Aviation Management Reference Manual, ***IHOG NWCG Standards for Helicopter Operations,*** and ***IASG Interagency Standards for Aerial Supervision.***
- **FS** – FSM 5700, FSH 5709.16 and applicable aviation guides when approved by the agency and referenced in policy.
- **BIA** – BIA National Aviation Plan (NAP) and applicable aviation guides as referenced in the NAP.

Safety alerts, operational alerts, instruction memoranda, information bulletins, incident reports, and other guidance or information are issued as needed. An up-to-date library with aviation policy and procedural references will be maintained at all permanent aviation bases, dispatch, and aviation management offices.

Aviation Safety

The FS, BLM, and BIA have adopted Safety Management Systems (SMS) as the foundation for the aviation safety program. The four pillars of SMS are Safety Policy, Safety Risk Management, Safety Assurance, and Safety Promotion. SMS is the standard for aviation safety set by the International Civil Aviation Organization (ICAO) and the Federal Aviation Administration (FAA).

SMS focuses on:

- Emphasis on proactive risk management;
- Promotes a “Just” culture;
- Addresses systemic safety concerns;
- Holds the organization accountable;
- Identifies “What” so we can manage the manageable; and
- Communicates the “Why” so the culture can learn from mistakes.

The intent of SMS is to improve the aviation culture by increasing hazard identification, reduce risk-taking behavior, learn from mistakes, and correct procedures before a mishap occurs rather than after the accident. More information on SMS is available at the Wildland Fire Lessons Learned Center under the Lessons Learned link at https://www.wildfirelessons.net/home. Additionally, the current approved US Forest Service Aviation SMS Guide is available at https://www.fs.fed.us/managing-land/fire.
Risk Assessment and Risk Management

The use of risk management will help to ensure a safe and successful operation. Risk is the probability that an event will occur. Assessing risk identifies the hazard, the associated risk, and places the hazard in relationship to the mission. A decision to conduct a mission requires weighing the risk against the benefit of the mission and deciding whether the risks are acceptable.

Aviation missions always have some degree of risk. The four sources of hazards are methods, medium, man, and machine. Managing risk is a 5-step process:

1. Identify hazards associated with all specified and implied tasks for the mission.
2. Assess hazards to determine potential of occurrence and severity of consequences.
3. Develop controls to mitigate or remove risk, and make decisions based on accepting the least risk for the best benefit.
4. Implement controls – (1) education controls, (2) physical controls, and (3) avoidance controls.
5. Supervise and Evaluate – enforce standards and continuously re-evaluate their effectiveness in reducing or removing risk. Ensure that controls are communicated, implemented, and enforced.

• FS – FSM 5700. Employees shall use an operational risk management process to evaluate the risk and hazards prior to every flight.

How to Properly Refuse Risk (Aviation)

Every individual (government and contracted employees) has the right and obligation to report safety problems affecting his or her safety and has the right to contribute ideas to correct the hazard. In return, supervisors are expected to give these concerns and ideas serious consideration. When an individual feels an assignment is unsafe, he or she also has the obligation to identify, to the degree possible, safe alternatives for completing that assignment. Turning down an assignment is one possible outcome of managing risk.

A “turn down” is a situation where an individual has determined he or she cannot undertake an assignment as given and is unable to negotiate an alternative solution. The turn down of an assignment must be based on assessment of risks and the ability of the individual or organization to control or mitigate those risks. Individuals may turn down an assignment because of safety reasons when:

• There is a violation of regulated safe aviation practices;
• Environmental conditions make the work unsafe; or
• They lack the necessary qualifications or experience.

Individuals will directly inform their supervisor that they are turning down the assignment as given. The most appropriate means of documented turn down criteria is using the Aviation Watch Out Situations (IRPG).
Supervisors will notify the Air Operations Branch Director (AOBD) or unit aviation leadership immediately upon being informed of a turn down. If there is no AOBD, notification shall go to the appropriate Section Chief, the Incident Commander or local fire and aviation staff. Proper handling of turn downs provides accountability for decisions and initiates communication of safety concerns within the incident organization.

If the assignment has been turned down previously and the supervisor asks another resource to perform the assignment, he or she is responsible to inform the new resource that the assignment had been turned down and the reasons why. Furthermore, personnel need to realize that a “turn down” does not stop the completion of the assigned operation. The “turn down” protocol is an integral element that improves the effective management of risk, for it provides timely identification of hazards within the chain of command, raises risk awareness for both leaders and subordinates, and promotes accountability.

If an unresolved safety hazard exists the individual needs to communicate the issue/event/concern immediately to his or her supervisor and document as appropriate.

Aviation Safety Support

Aviation Safety and Technical Assistance Team (ASTAT)

During high levels of aviation activity, it is advisable to request an Aviation Safety and Technical Assistance Team (ASTAT). An ASTAT’s purpose is to enhance risk management, efficiency, effectiveness, and provide technical assistance while reviewing aviation operations. If an ASTAT cannot be filled internally, the request may be placed with NICC through established ordering channels using individual overhead requests. An ASTAT should operate under a Delegation of Authority from the appropriate State/Regional Aviation Manager(s) or Multi Agency Coordinating Group. Formal written reports shall be provided to appropriate manager(s) as outlined at the in-brief. A team should be developed to fit the need of the requesting unit and may consist of the following:

- Aviation Safety Manager;
- Operations Specialist (helicopter and/or fixed wing);
- Pilot Inspector;
- Maintenance Inspector;
- Avionics Inspector (optional); and
- Aircraft Dispatcher (optional).

Aviation Safety Briefing

Every passenger must receive a briefing prior to each flight. The briefing is the responsibility of the Pilot in Command (PIC) but may be conducted by the pilot, flight manager, helicopter manager, fixed-wing base manager, or an individual with the required training to conduct an aviation safety briefing. The pilot should also receive a mission briefing from the government aircraft manager.
Aviation Hazard
An aviation hazard is any condition, act, or circumstance that compromises the safety of personnel engaged in aviation operations. Pilots, flight crew personnel, aviation managers, incident air operations personnel, and passengers are responsible for hazard identification and mitigation. Aviation hazards may include but are not limited to the following:

- Deviations from policy, procedures, regulations, and instructions;
- Improper hazardous materials handling and/or transport;
- Airspace conflicts/flight following deviation;
- Deviation from planned operations;
- Failure to utilize PPE or Aviation Life Support Equipment (ALSE);
- Failure to meet qualification standards or training requirement;
- Extreme environmental conditions;
- Improper ground operations;
- Improper pilot procedures;
- Fuel contamination; and
- Unsafe actions by pilot, air crew, passengers, or support personnel.

Aviation hazards also exist in the form of wires, low-flying aircraft, and obstacles protruding beyond normal surface features. Each office will post, maintain, and annually update a “Known Aerial Hazard Map” for the local geographic area where aircraft are operated, regardless of agency jurisdiction. This map will be posted and used to brief flight crews. Unit Aviation Managers are responsible for ensuring the development and updating of Known Aerial Hazard Maps (SIHOG NWCG Standards for Helicopter Operations).

Aerial Applications of Wildland Fire Chemical Safety
Chapter 12 contains information concerning the aerial application of wildland fire chemicals.

SAFECOM
The DOI and the FS have an incident/hazard reporting form called The Aviation Safety Communiqué (SAFECOM). The database, available at https://www.safecom.gov/, fulfills the Aviation Mishap Information System (AMIS) requirements for aviation mishap reporting for the DOI agencies and the FS. Categories of reports include: Accidents, Airspace, Hazards, Incidents, Maintenance, Mishap Prevention, and Kudos. The system uses the SAFECOM Form OAS-34 or FS-5700-14 to report any condition, observation, act, maintenance problem, or circumstance with personnel or aircraft that has the potential to cause an aviation-related mishap. The SAFECOM system is not intended for initiating punitive actions. Submitting a SAFECOM is not a substitute for "on-the-spot" correction(s) to a safety concern. It is a tool used to
identify, document, track, and correct safety related issues. A SAFECOM does not replace the requirement for initiating an accident or incident report.

Any individual (including vendors/cooperators) with knowledge of an incident/hazard should complete a SAFECOM. The SAFECOM form, including attachments and pictures, should be entered directly on the internet at https://www.safecom.gov/ or faxed to the Department of the Interior’s Office of Aviation Services, Aviation Safety (208) 433-5069 or to the FS at (208) 387-5735 ATTN: SAFETY. Electronic cc copies are automatically forwarded to the National, Regional, State, and Unit Aviation Managers.

The agency with operational control of the aircraft at the time of the hazard/incident/accident is responsible for completing the SAFECOM and submitting it through agency channels.

### Aircraft Incidents/Accidents

Notification to the FS or OAS and DOI agency Aviation Safety Managers is required for any aircraft mishap involving damage or injury. Use the hotline (888) 464-7427 or the most expeditious means possible. Initiate the appropriate unit Aviation Mishap Response Plan.

### Low-level Flight Operations

The only fixed-wing aircraft missions authorized for low-level fire operations are:

- Smokejumper/Para-cargo;
- Aerial Supervision Module (ASM) and Lead operations; and
- Aerial dispensing of retardant, water enhancers and water.

### Operational Procedures

- A high-level recon will be made prior to low-level flight operations.
- All flights below 500 feet will be contained to the area of operation.
- PPE is required for all fixed-wing, low-level flights. Helmets are not required for multi-engine airtanker crews, smokejumper pilots, and Leadplane/ASM flight/aircrew members.

### Congested Area Flight Operations

Airtankers can drop retardant in congested areas under DOI authority given in 14 CFR Part 137.

FS authority is granted under exemption 392, from 14 CFR Part 91.119 as referenced in FSM 5714. When such operations are necessary, they may be authorized subject to these limitations:

- Airtanker operations in congested areas may be conducted at the request of the city, rural fire department, county, state, or federal fire suppression agency;
- An ASM/Leadplane is ordered to coordinate aerial operations.
• The air traffic control facility responsible for the airspace is notified prior to
or as soon as possible after the beginning of the operation;
• A positive communication link must be established between the ASM or
Leadplane, airtanker pilot(s), and the responsible fire suppression agency
official; and
• The IC for the responsible fire agency or designee will advise the
ASM/Leadplane/airtanker that all non-essential people and movable
property have been cleared prior to commencing retardant drops.

Unmanned Aircraft Systems

### UAS Incursion Reporting Protocol
• Fire personnel should immediately notify the ATGS if overhead, aircraft
over the incident, the IC and dispatch. Dispatch should report all
unauthorized UAS or drone activity immediately via SAFECOM
(www.safecom.gov) and to the Federal Aviation Administration.

Reporting Keypoints:
• Report UAS information (location, color, size, altitude, flight pattern), if
known.
• Dispatch centers should report incursions to the nearest Air Route Traffic
Control Center (ARTCC) or follow geographic area protocol.

Policy
• UAS fire operations shall be conducted under the provisions of the
Interagency Fire Unmanned Aircraft Systems Operations Guide NWCG
• When UAS are flown for USFS/DOI work or benefit, Federal Aviation
Administration (FAA), USFS, and DOI regulations apply.
• All aircraft (to include UAS) purchase, lease, or acquisition must follow
department procurement policy and procedures.
• All aircraft and pilots employed by the USFS or DOI agencies shall be
credentialed in accordance with departmental policy.
• UAS flights under USFS operational control must adhere to USFS policy
and regulations regarding their use. Guidance can be found in FSM 5713.7,
the USFS National Aviation Safety and Management Plan and at ###
https://www.fs.fed.us/science-technology/fire/unmanned-aircraft-systems
• UAS flights under DOI operational control must adhere to DOI and agency
specific policy and regulations regarding their use. Guidance can be found
in the Departmental Manual, Parts 350-353, and Operational Procedures
• UAS procured/owned/operated by cooperating agencies (state, local, and
International) may be utilized on federally-managed fires when cooperative
agreements are in place and the aircraft and pilot have been approved by
letter nationally or regionally.
• UAS flights conducted by non-participatory entities (e.g., media) must adhere to FAA regulations.

• A Special Government Interest Waiver (SGI) must be issued for beyond visual line of sight (BVLOS) operations within a TFR. SGI requests shall be coordinated through departmental channels routed through the UAS Coordinator at 208-387-5335.

Personnel

• Four UAS positions are listed in the PMS 310-1:
  ○ Unmanned Aircraft System Pilot (UASP)
  ○ Unmanned Aircraft System, Data Specialist (UASD)
  ○ Unmanned Aircraft System, Manager (UASM)
  ○ Unmanned Aircraft System, Module Leader (UASL)

Crew Composition

• UAS operations are typically conducted under a crew (module) concept.

• Typical module configuration:
  ○ Agency operated systems (Type 3 or 4): UASP and UASD
  ○ Contract systems (Type 1 or 2): UASM and UASD
  ○ Span of control for multiple UAS operations on the same incident can be mitigated with UASL.

Ordering

• UAS personnel are ordered through established dispatch channels.

• Agency-owned UAS should be designated by make, model, and call sign in the “Special Needs” section of the resource order.

• Federally contracted exclusive use and CWN UAS are national resources. Geographic areas utilizing them will make them available for fires on a priority basis.

Operations

• UAS flight crews utilize established procedures (e.g., Fire Traffic Area) for coordinating flights with aerial supervision/on-scene aircraft.

• Large UAS (typically type 1 and 2) will launch and recover from a “Launch and Recovery Zone” which should be designated on incident aviation planning maps.

• Small (typically type 4) UAS are fireline portable and flights will be conducted through established procedures.

Key Points

• UAS is an effective tool for situational awareness and data collection. Determine the data objective before ordering the resource and flying the mission.

UAS training, aircraft, sensors, and capabilities are listed on the Interagency Fire UAS Subcommittee website (see below).

- Personally owned UAS or model aircraft must not be used by federal agencies or their employees for interagency fire use.

- Individuals who are determined to have interfered with wildland fire operations may be subject to civil penalties and criminal prosecution.

**Airspace Coordination**

The Interagency Airspace Program is an aviation safety program designed to enhance aviation safety and reduce the risk of a mid-air collision. The [NWCG Standards for Airspace Coordination](https://www.nwcg.gov/publications/520) provides direction and procedures for airspace coordination. Additional guidance may be found in the [National Interagency Mobilization Guide](https://www.nwcg.gov/publications/520) and supplemented by local mobilization guides.

- **FS** – Refer to FSM 5709.16, Chapter 30 for additional airspace information.

An Airspace Coordinator (ASCO) should be ordered when incident aviation activity is widespread and involves a number of complex TFRs, complex airspace is involved, or difficult airspace conflict resolutions exist with various agencies.

Airspace deconfliction is performed for both emergency and non-emergency aviation activities.

Some BLM, BIA, state and FS units have Memorandums of Understanding (MOUs) with local military airspace authorities for airspace coordination. Briefings from Unit Aviation Managers/Officers (UAM/UAO) are crucial to ensure that any local airspace information is coordinated before flight.

All firefighting aircraft are required to have operative transponders and will use a national firefighting transponder code of 1255 when engaged in, or traveling to, firefighting operations (excluding ferry flights), unless given a discrete code by Air Traffic Control (ATC).
### Additional coordination information can be found by contacting:

- BLM – State Aviation Managers, National Airspace Program Manager
- NPS – Regional Aviation Managers
- FWS – National Aviation Safety and Operations
- FS – Regional Aviation Officers, National Airspace Program Manager
- BIA – Regional Aviation Managers

---

**Flight Request and Approval**

- NPS – Reference RM 60, Appendix 3 and 4.
- FS – Refer to FSM 5709.16, Chapter 30 for all flights.

---

**Point-to-Point Flights**

A “Point-to-point” flight is one that originates at one developed airport or permanent helibase and flies directly to another developed airport or permanent helibase with the sole purpose of transporting personnel or cargo (this term does not apply to flights with a scheduled air carrier on a seat fare basis). These types of flights are often referred to as “administrative” flights and only require the aircraft and pilot to be carded and approved for point-to-point flight. A point-to-point flight is conducted higher than 500 feet above ground level (AGL).

Agency policy requires designating a Flight Manager for point-to-point flights transporting personnel. The Flight Manager is a government employee that is responsible for coordinating, managing, and supervising flight operations. The Flight Manager is not required to be on board for most flights. For those flights that have multiple legs or are complex in nature a Flight Manager should attend the entire flight. The Flight Manager will meet the qualification standard for the level of mission assigned as set forth in the *Interagency Aviation Training Guide* (IAT).

- NPS – Reference RM-60, Appendix 3 for agency specific policy.
- FS – Refer to FSM 5709.16 Chapter 30 and the Forest Service Administrative Use of Aircraft Desk Reference.
- BIA – Reference the BIA National Aviation Plan.

---

**Mission Flights**

Mission flights are defined as flights not meeting the definition of point-to-point flight. A mission flight requires work to be performed in the air (retardant or water delivery, fire reconnaissance, smokejumper delivery), or through a combination of ground and aerial work (delivery of personnel and/or cargo from...
helibases to helispots or unimproved landing sites, rappelling or cargo let-down, horse herding).

- PPE is required for any fixed wing mission flight conducted below 500’AGL. **Flight helmets are not required for multi-engine airtanker crews, smokejumper pilots and Leadplane/ASM flight/aircrew members.**
  - **DOI** – Flight helmets may not be required for multi-engine airtanker crews, smokejumper pilots and Leadplane/ASM flight/aircrew members. Note: DOI requires a helmet for all special use missions 500 feet and below unless a waiver is obtained per the ALSE Handbook.
  - Refer to agency aviation policy to determine if ALSE waivers are in place for your specific mission.
  - **FS** – USFS does not require flight helmets for fixed wing special use missions.

- Required attire for ATGS and fire reconnaissance are:
  - Leather shoes or boots; and
  - Natural fiber shirt, full length cotton or nomex pants, or flight suit.

- The use of full PPE is required for all helicopter flights (point to point and mission) and associated ground operations. The specific items to be worn are dependent on the type of flight, the function an individual is performing, or the ground operation being conducted. Refer to the tables in Chapter 9 of the **NWCG Standards for Helicopter Operations** for specific requirements.

- All personnel will meet training and qualification standards required for the mission.

- Agency FM radio capability is required for all mission flights.

- All passengers must be authorized and all personnel onboard must be essential to the mission.
  - **FS** – Special Use Mission Flight is any flight that is not point-to-point. Special use mission flights require special pilot endorsements, flight evaluations, training, and/or specialized aircraft equipment. For all special use mission flights, all pilots and aircraft must be specifically approved in writing for that flight.

Mission flights for fixed-wing aircraft include but are not limited to the following:

- Water or retardant application;
- Parachute delivery of personnel or cargo;
- Leadplane/ASM/Airtanker operations;
- Takeoff or landing requiring special techniques due to hazardous terrain, obstacles, or surface conditions; and
- Aerial Supervision.

Mission helicopter flights include but are not limited to the following:

- Flights conducted within 500 feet AGL;
- Water or retardant application;
- Helicopter coordinator and ATGS operations;
• Aerial ignition activities;
• External load operations;
• Rappelling;
• Takeoff or landing requiring special techniques due to hazardous terrain, obstacles, pinnacles, or surface conditions;
• Free-fall cargo;
• Fire reconnaissance;
• Short-haul operations; and
• Night helicopter operations.

### Low-level Flight Operations

The only fixed-wing aircraft missions authorized for low-level fire operations are:

• Smokejumper/Para-cargo;
• Aerial Supervision Module (ASM) and Lead operations; and
• Aerial dispensing of retardant, water enhancers and water.

#### Operational Procedures

• A high-level recon will be made prior to low-level flight operations.
• All flights below 500 feet will be contained to the area of operation.
• PPE is required for all fixed-wing, low-level flights. Helmets are not required for multi-engine airtanker crews, smokejumper pilots, and Leadplane/ASM flight/aircrew members.

### Congested Area Flight Operations

Airtankers can drop retardant in congested areas under DOI authority given in 14 CFR Part 137.

FS authority is granted under exemption 392, from 14 CFR Part 91.119 as referenced in FSM 5714. When such operations are necessary, they may be authorized subject to these limitations:

• Airtanker operations in congested areas may be conducted at the request of the city, rural fire department, county, state, or federal fire suppression agency;
• An ASM/Leadplane is ordered to coordinate aerial operations;
• The air traffic control facility responsible for the airspace is notified prior to or as soon as possible after the beginning of the operation;
• A positive communication link must be established between the ASM or Leadplane, airtanker pilot(s), and the responsible fire suppression agency official; and
• The IC for the responsible fire agency or designee will advise the ASM/Leadplane/airtanker that all non-essential people and movable property have been cleared prior to commencing retardant drops.
Flight-Following All Aircraft

Flight-Following is mandatory for all flights. Refer to the National Interagency Mobilization Guide for specific direction.

- Agency FM radio capability is required for all mission flights.
- For mission flights, there are two types of Agency Flight Following:
  - Automated Flight Following (AFF) and radio check-in. AFF is the preferred method of agency flight following. If the aircraft and flight following office have AFF capability, it shall be utilized. Periodic radio transmissions are acceptable when utilizing AFF. Reference the AFF procedures section of the National Interagency Mobilization Guide for more information.
- All dispatch centers designated for fire support shall have the ability to monitor AFF as well as the capability to transmit and receive “National Flight Following” and “Air Guard.”
- If AFF becomes inoperable the aircraft will normally remain available for service, utilizing radio/voice system for flight following. Each occurrence must be evaluated individually and decided by the COR/CO.
- Helicopters conducting Mission Flights shall check-in prior to and immediately after each takeoff/landing per ### IHOG NWCG Standards for Helicopter Operations 4.II.E.2.

Sterile Cockpit All Aircraft

Sterile cockpit rules apply within a 5-mile radius of the airport. The flight crew will not perform radio or cockpit communication during that time that is not directly related to safe flight of the aircraft from taxi to 5 miles out and from 5 miles out until clearing the active runway. This would consist of reading checklists, communication with Air Traffic Control (ATC), Flight Service Stations, Unicom, or other aircraft with the intent of ensuring separation or complying with ATC requirements. Communications by passengers or air crew members can be accomplished when the audio panels can be isolated and do not interfere with flight operations of the flight crew.

Exception: When conducting firefighting missions within 5 miles of an uncontrolled airport, maintain sterile cockpit until departing the traffic pattern and reaching final altitude. Monitor CTAF frequency if feasible while engaged in firefighting activities. Monitor CTAF as soon as practical upon leaving the fire and returning to the uncontrolled airport. When conducting firefighting missions within Class B, C, or D airspace, notify dispatch that ATC communications will have priority over dispatch communications.

Interagency Interim Flight and Duty Limitations/Aviation Stand Downs

Aviation stand downs are a means to find time, in an otherwise demanding flight schedule, to reflect on core aviation safety values. In this context, aviation stand downs refer to an administrative decision to keep tactical aviation resources on the ground through all or part of their normal duty day or days.
Interim flight and duty limitations are a method to manage pilot and crew fatigue by reducing the length of the duty day or increasing the number of days off in the normal duty day cycle. During extended periods of high flight activity, fatigue must be mitigated by fire and aviation managers.

Aviation stand downs and interim flight and duty day limitations can be implemented at the Geographic Area or National level. In either case, the procedure for implementation is the same. Requests for implementation of flight and duty limitations, or proposed stand down parameters, will be made through the National Aviation Office through which it originated.

Decisions and procedures for implementation will be made on a coordinated, interagency basis, involving the GACC, NICC, and National Aviation Representatives at NIFC and Aviation Contracting Officers. Details of the proposal will be formalized and coordinated with other affected agencies and implemented through the National Multi-Agency Coordinating Group (NMAC).

Interim Flight and Duty Limitations Implementation

During extended periods of a high level of flight activity or maximum 14-hour days, fatigue factors must be taken into consideration by Fire and Aviation Managers. Phase 2 and/or Phase 3 Duty Limitations will be implemented for specific geographic area’s aviation resources. The minimum scope of operation should be by geographic area; e.g., Northwest, Great Basin.

Interim flight and duty limitations are written to apply to federal contract resources. States may apply them if they so choose. The interim flight and duty limitations can apply to agency pilots, but additional days off must be coordinated with the agency pilot’s supervisor and must follow federal pay and leave regulations.

Phase 1 – Standard Flight and Duty Limitations (Abbreviated Summary)

- 14-hour maximum duty day;
- 8 hours maximum daily flight time for mission flights;
- 10 hours for point-to-point, with a 2 pilot crew;
- A maximum of 42 hours flight time during any consecutive 6-day period. When a pilot acquires 36 or more flight hours in a consecutive 6-day period, the pilot shall be given the following day off. A new 6-day cycle shall begin upon return from any day off;
- Minimum of 10 hours uninterrupted time off (rest) between duty periods;
- Two days off within any 14-day period.

This does not diminish the authority or obligation of any individual COR (Contracting Officer Representative) or Aviation Manager to impose shorter duty days or additional days off at any time for any flight/maintenance crew members for fatigue. This authority is currently provided for in agency direction.
Aviation managers should consider the following actions:

- Any tactical aircraft flight crew member (air tanker, helicopter, ASM/leadplane, SEAT or air attack) may request an additional day off in conjunction with their normally scheduled day(s) off.
- The additional day off may be granted when requested. Flight crews are encouraged to honestly assess their fatigue level and request an additional day off if they believe it is needed.
- Aircraft availability will be paid when this occurs regardless of whether a relief crew is provided or not.
- When an additional day off is granted, document this in the remarks section of the aircraft payment document.
- In order to assure sufficient coverage, additional days off will need to be coordinated within the currently assigned GACC and communicated to national aviation managers. Coordinate with your aviation managers, contracting officers and dispatch organizations to implement these actions.

**Phase 2 – Interim Duty Limitations**

When Phase 2 is activated, pilots shall adhere to the flight and day-off limitations prescribed in Phase 1 and the duty limitations defined under Phase 2.

Each flight crew member shall be given an additional day off each 14-day period. Crews on a 12-and-2 schedule shall have 3 consecutive days off (11-and-3). Flight crews on 6-and-1 schedules shall work an alternating weekly schedule of 5 days on, 2 days off, then 6 days on and one day off.

Aircraft fixed daily rates and special rates, when applicable, shall continue to accrue during the extra day off. Contractors may provide additional approved crews to maximize utilization of their aircraft. All costs associated with providing the additional crew will be at the contractor’s expense, unless the additional crew is requested by the Government.

**Phase 3 – Interim Duty Limitations**

When Phase 3 is activated, pilots shall adhere to the flight limitations of Phase 1 (standard), the additional day off of Phase 2, and the limitations defined under Phase 3.

Flight crew members shall have a minimum of 12 consecutive hours of uninterrupted rest (off duty) during each duty day cycle. The standard duty day shall be no longer than 12 hours, except a crew duty day extension shall not exceed a cumulative 14-hour duty day. The next flight crew rest period shall then be adjusted to equal the extended duty day; i.e., 13-hour duty day, 13 hours rest; 14-hour duty day, 14 hours rest. Extended duty day applies only to completion of a mission. In no case may standby be extended beyond the 12-hour duty day.

Double crews (2 complete flight crews assigned to an aircraft), augmented flight crews (an additional pilot-in-command assigned to an aircraft), and aircraft
crews that work a rotating schedule; i.e., 2 days on, 1 day off, 7 days on, 7 days off, or 12 days on, 12 days off, may be exempted from Phase 2 Limitations upon verification that their scheduling and duty cycles meet or exceed the provisions of Paragraph a. of Phase 2 and Phase 1 Limitations.

Exemptions of Phase 3 provisions may be requested through the local Aviation Manager or COR, but must be approved by the FS RAO or DOI Area Aviation Manager.

### Aviation Assets

Typical agency aviation assets include: Helitack or Rappel, Aerial Supervision (ATGS, HLCO, Leadplane, and ASM), Large (multi-engine) Airtankers, Very Large Airtankers (VLATs), Single Engine Airtankers (SEATs), and Smokejumpers.

- **BLM** – All BLM acquired aircraft (exclusive use, On-Call, and CWN) are available to move to areas of greatest Bureau need, thereby maximizing efficiency and effectiveness. Specific authorities and responsibilities for Field/State and National Offices are outlined earlier in this chapter. Offices are expected to adhere to procedures established in the National Aviation Plan for both acquisition and use reporting.

- **FS** – All FS aircraft (agency-owned, exclusive use, leased and CWN) are available to move to areas of greatest agency need, thereby maximizing efficiency and effectiveness. Forest Service units are expected to adhere to procedures established in policy for acquisition and use reporting.

- **BIA** – All BIA acquired aircraft (exclusive use, On-Call, and CWN) are available to move to areas of greatest Bureau need, thereby maximizing efficiency and effectiveness. Specific authorities and responsibilities for Regional/Agencies and National Offices are outlined in the National Aviation Plan for both acquisition and use reporting.

### Helitack

Helitack crews perform suppression and support operations to accomplish fire and resource management objectives.

### Organization – Crew Size

- **BLM** – The minimum crew size for a BLM exclusive-use Type 3 helicopter is seven personnel. The minimum crew size for a BLM exclusive-use Type 2 helicopter is ten personnel. All BLM exclusive-use crews will consist of key positions including; supervisor, assistant, squad boss, and crew members.
CHAPTER 16  AVIATION OPERATIONS AND RESOURCES

The BLM States may establish larger crew size and standards for their exclusive use helicopter crews based on program need. Any increase in crew size will be documented in the respective State Aviation Plan. BLM helicopters operated in Alaska need only be staffed with a qualified Helicopter Manager (HMGB).

- **NPS** – Helicopter exclusive-use modules will consist of a minimum of eight fire funded personnel. The NPS regions may establish larger crew size and standards for their exclusive use helicopter crews based on the need for an all-hazard component (Fire, SAR, Law Enforcement, and EMT). Exception to minimum helicopter crew staffing standards must be approved by the National Aviation Office. NPS helicopters operated in Alaska need only be staffed with a qualified Helicopter Manager (HMGB).

- **FS** – Regions may establish minimum crew size and standards for their exclusive use helitack crews. Experience requirements for exclusive-use helicopter positions are listed in FSFAQG, Chapter 4.

- **BIA** – All helicopter personnel responsibilities are outlined in the **IHOG NWCG Standards for Helicopter Operations**. CWN helitack training and currency requirements are contained in the **NWCG PMS 310-1**.

Each region hosting exclusive-use helicopters is responsible for providing essential management, overhead, equipment, facilities and the resources necessary to fully support the helitack crew. Host regions are encouraged to increase helitack crew size minimum requirements to enhance operational efficiency. Recommended minimum staffing levels:

- Type 3 helicopter – 7 helitack personnel
- Type 2 helicopter – 15 helitack personnel

**Operational Procedures**

The **Interagency Helicopter Operations Guide (IHOG) NFES 1885 NWCG Standards for Helicopter Operations** (PMS 510) is policy for helicopter operations.

**Communication**

The helitack crew standard is one handheld programmable multi-channel FM radio per every two crew persons, and one multi-channel VHF-AM programmable radio in the primary helitack crew (chase) truck. Each helitack crew (chase) vehicle will have a programmable VHF-FM mobile radio. Each permanent helibase will have a permanent programmable FM radio base station and should be provided a VHF-AM base station radio.

**Transportation**

Dedicated vehicles with adequate storage and security will be provided for helitack crews. The required Gross Vehicle Weight (GVW) of the vehicle will be dependent upon the volume of equipment carried on the truck and the number of helitack crewmembers assigned to the crew.
• **BLM/BIA** – Minimum vehicle configuration for a seven person crew will consist of one Class 661 Helitack Support Vehicle and one Class 156 or Class 166 vehicle.

**Training and Experience Requirements**
All helitack members will meet fire qualifications as prescribed by the National Wildfire Coordinating Group (NWCG) PMS 310-1 and their agency manual requirements. The following chart establishes experience and training requirements for FS, BLM, NPS, FWS, and BIA exclusive use, Fire Helicopter Crew Positions.

• **BIA** – Follows the guidance put forth in the National Aviation Plan in regards to Fire Helicopter Position Standards.

Non-exclusive use HECM’s and HMGB’s should also meet the following currency requirements.

**Exclusive Use Fire Helicopter Position Prerequisites**

<table>
<thead>
<tr>
<th>Position</th>
<th>Minimum Prerequisite Experience</th>
<th>Minimum Required Training</th>
<th>Currency Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fire Helicopter Crew Supervisor</td>
<td>One season^4 as an Assistant Fire Helicopter Crew Supervisor, ICT4, HMGB, HEBM</td>
<td></td>

</tr>
</tbody>
</table>

1. All exclusive use Fire Helicopter positions require an arduous fitness rating.
2. Minimum experience and qualifications required prior to performing in the exclusive use position. Each level must have met the experience and qualification requirements of the previous level(s).
3. Minimum training required to perform in the position. Each level must have met the training requirements of the previous level(s).
4. A “season” is continuous employment in a primary wildland fire position for a period of 90 days or more.
5. After completing S-372, must attend Interagency Helicopter Manager Workshop (RT-372) within three years and every three years thereafter.

**Note:** Exceptions to the above position standards and staffing levels may be granted on a case-by-case basis by the BLM National Aviation Office, NPS Regional Office, FWS Regional Office, or FS Regional Office as appropriate.
• Some positions may be designated as COR/Alternate-COR. If so, see individual Agency COR training and currency requirements.
• Fire Helicopter Managers (HMGB) are fully qualified to perform all the duties associated with Resource Helicopter Manager.

Helicopter Rappel and Cargo Let-Down
Any rappel or cargo let-down programs must be approved by the appropriate agency national headquarters.
• **BLM** – BLM personnel involved in an Interagency Rappel Program must have SFMO approval.
• **NPS/BIA** – Approval is required by the National Office.
• **FS** – Approval is required by the National Office.

All rappel and cargo let-down operations will follow the *Interagency Helicopter Rappel Guide* (IHRG), as policy. Any exemption to the guide must be requested by the program through the state/region for approval by the National Aviation Office (BLM), or Director of Fire and Aviation (FS).

### Single-Skid, Toe-In, and Hover Exit/Entry (STEP)
Any STEP program must be approved by the appropriate agency national office.
• **BLM** – BLM STEP protocols are outlined in the *BLM National Aviation Plan*.

Emergency Medical Short-Haul
The emergency medical short-haul mission is intended to extract injured or ill personnel from areas where a ground based evacuation would expose rescuers to greater risk or where such evacuation would likely cause greater harm or threaten the life or limbs of the patient due to added exposure or time delay. Based on a risk assessment, short-haul transport of personnel/patients may occur over the most reasonable distance to a location where another type of medical transportation is available (e.g., ground ambulance, EMS/life flight, or internal in an agency helicopter).

All emergency medical short-haul programs must be approved by the appropriate agency national headquarters.
• **NPS/FS/BIA** – National Office approval is required.

All short-haul operations will comply with the following policy:
• **NPS** – *Helicopter Short-haul Handbook*.
• **FS** – *Emergency Medical Short-Haul Operations Plan (EMSHOP)*.

Exemptions to the policy must be requested by the program through the regional office for approval by the National Aviation Office (NPS) or Director of Fire and Aviation (FS).
Aerial Ignition

The *NWCG Standards for Aerial Ignition* (PMS 501) is policy for all aerial ignition activities.

Fire Chemical Avoidance Areas

See Chapter 12 (Suppression Chemicals and Delivery Systems) for guidance.

Aerial Supervision Principles for ATGS, HLCO, ASM, and Leadplane

The response speed of aerial supervision resources contributes greatly to established aggressive initial attack doctrine and should be utilized accordingly. Aerial supervision resources will be dispatched when available to initial/extended attack incidents in order to enhance safety, effectiveness, and efficiency of aerial/ground operations. When aerial supervision resources are collocated with airtankers, they will be launched together to maximize the safety, effectiveness, and efficiency of incident operations unless aerial supervision is currently over the incident. Incidents with three or more aircraft over/assigned to them should also have aerial supervision in the form of ATGS or ASM/Leadplane. A qualified smokejumper spotter (senior smokejumper in charge of smokejumper missions) may coordinate smokejumper operations with on-scene aircraft over a fire until a qualified ATGS arrives.

Operational Procedures and Policy

The *Interagency Aerial Supervision Guide Interagency Standards for Aerial Supervision* (IASG, PMS 505) provides operational procedures for all aerial supervision resources. The *IASG Interagency Standards for Aerial Supervision* and additional aerial supervision forms are maintained online at the NWCG website https://www.nwcg.gov/publications/505.

The *NIMS Wildland Fire Qualification System Guide NWCG Standards for Wildland Fire Position Qualifications* (PMS 310-1) provides training, qualification, and currency standards.

Air Tactical Group Supervisor (ATGS)

The ATGS coordinates incident airspace and manages incident air traffic. The ATGS is an airborne firefighter who coordinates, assigns, and evaluates the use of aerial resources in support of incident objectives. Specific duties and responsibilities are outlined in the *Wildland Fire Incident Management Field Guide* (PMS 210) and the *IASG Interagency Aerial Supervision Guide Interagency Standards for Aerial Supervision* (PMS 505).
Program Management

The air attack program is managed at the national level by agency program managers. The National Interagency Aviation Committee (NIAC) provides guidance through the Interagency Aerial Supervision Subcommittee (IASS), which authorizes an Agency Program Manager/ATGS GACC Representative to provide operational and programmatic oversight at the Geographic Area level.

Training

Classroom training is completed as per the PMS 310-1. Field (flight) training assignments are coordinated and prioritized by the Geographic Area Training Representatives and Agency Program Manager/ATGS GACC Representatives.

National interagency ATGS training aircraft have been identified and are utilized for the sole purpose of ATGS flight training.

Operational Considerations

- Ground resources will maintain consistent communication on assigned air to ground frequencies with aerial supervision to maximize the safety, effectiveness, and efficiency of aerial operations.
- Relief aerial supervision should be ordered for sustained operations to ensure continuous coverage over an incident.
- Personnel who are performing aerial reconnaissance and detection will not perform aerial supervision duties unless they are fully qualified as an ATGS.
- ATGS aircraft must meet the aircraft/avionics typing requirements listed in the IASG Interagency Standards for Aerial Supervision and the pilot must be carded to perform the air tactical mission. Rotor-wing pilots are not required to be carded for air tactical missions.

Leadplane

A leadplane is a national shared resource. Any operation that limits the national resource availability must be approved by the agency program manager.

Agency policy requires an ASM or Leadplane to be on order prior to aerial retardant/suppressant delivery over a congested area. Operations may proceed before the ASM or Leadplane arrives if communications are established with on-site resources, authorization is granted from the IC, and the line is cleared prior to commencing aerial application operations.

Aerial Supervision Module (ASM)

The ASM is a national shared resource.

The ASM is crewed with both a Leadplane qualified pilot (LPIL) and an Air Tactical Supervisor (AITS). These individuals are specifically trained to operate together as a team. The resource is primarily designed for providing both
functions (Leadplane pilot and ATGS) simultaneously from the same aircraft, but can also provide single role service.

The LPIL is primarily responsible for aircraft coordination over the incident. The AITS develops strategy and implements tactical plans through coordination with the IC or designee.

**Operational Considerations**

Any operation that limits the national resource availability must be approved by the agency program manager.

Aerial or incident complexity and environmental considerations will dictate when the ASM ceases low-level operations. The ASM flight crew has the responsibility to determine when the complexity level of the incident exceeds the capability to perform both ATGS and leadplane functions from one aircraft. The crew will request additional supervision resources, or modify the operation to maintain mission safety and efficiency.

**Policy**

Only those individuals certified and authorized by the BLM–National Aviation Office or the FS–Branch Chief Pilot Standardization will function as an Air Tactical Supervisor (AITS) in an ASM mission profile.

**Aerial Supervision Module Program Training and Qualifications**

Training and qualification requirements for ASM crewmembers are defined in the [IASG Interagency Standards for Aerial Supervision](#).

**Aerial Supervision Coordination**

National coordination and management of leadplane and ASM aircraft and staffing is required to ensure there is aerial supervision coverage, response and capability nationwide. The Forest Service Aerial Supervision Program Manager and Forest Service Fixed-wing Coordinator coordinate and manage aerial supervision staffing, aircraft readiness and availability, capability, and response with pilots, aerial supervisors, regional aviation staff, Bureau of Land Management National Aviation Office staff, and the National Interagency Coordination Center.

**Reconnaissance or Patrol Flights**

The purpose of aerial reconnaissance or detection flights is to locate and relay fire information to fire management. In addition to detecting, mapping, and sizing up new fires, this resource may be utilized to provide ground resources with intelligence on fire behavior, provide recommendations to the IC when appropriate, and describe access routes into and out of fire areas for responding units. Only qualified Aerial Supervisors (ATGS, ASM, HLCO and LPIL) are authorized to coordinate incident airspace operations and give direction to aviation assets. Flights with a “Recon, Detection, or Patrol” designation should...
communicate with tactical aircraft only to announce location, altitude and to relay their departure direction and altitude from the incident.

### Airtankers

Federally contracted airtankers are national resources. Geographic areas administering these aircraft will make them available for initial attack and extended attack fires on a priority basis. Early-ups for large fire support can have a significant effect on the resource availability late in the day. NICC must be included in this discussion. The rationale for use of airtankers prior to normal start times for large fire support must include obtainable incident objectives in support of ground resources.

Host GACCs will check with NICC prior to releasing flight crews on Type 1 and Type 2 airtankers and VLATs for the day when those resources are not being used within the host area, and could be utilized elsewhere for emerging or ongoing fire activity.

Large airtankers are primarily used for initial attack and are initial attack capable without leadplane/ASM supervision. Very large airtankers are primarily used for large fire support and require leadplane/ASM supervision to be on scene prior to arriving on the fire.

The *National Interagency Mobilization Guide*, Chapter 50, “Airtankers” contains additional direction regarding staffing and maintenance of support functions to mobilize national resources.

For aviation safety and policy concerning wildland fire chemicals see Chapter 12 (Suppression Chemicals and Delivery Systems).

Federal airtankers are owned and operated by commercial vendors. Some states may contract for commercially-owned airtankers, own airtankers or order airtankers through Compacts either state-to-state or state-to-Canadian Province. The management of airtankers is governed by:

- **BLM** – The requirements of the DM, BLM NAP, and BLM Manual 9400.
- **FS** – Airtankers operate in accordance with 14 CFR Part 137, specific contracts, Grants of Exemption, Forest Service Manual (5700) and Handbook (5709.16) and the ### National Airtanker Operations Plan Forest Service Standards for Airtanker Operations.
- **BIA** – The requirements of the DM and BIA NAP.

### Airtanker Types

Airtankers are typed according to their load capacity:

- Very Large Air Tankers (VLAT) – 8,000 gallons or more
- Type 1 – 3,000 to 4,999 gallons
- Type 2 – 1,800 to 2,999 gallons
- Type 3 – 800 to 1,799 gallons
- Type 4 – up to 799 gallons
Very Large Airtankers (VLATs)

VLATs have some unique operational considerations including low-level supervision, terrain, airtanker base ramp operations and operations in the Fire Traffic Area (FTA).

- VLATs may be used on fires to augment Type 1, Type 2 and Type 3 airtankers, but not as a replacement.
- Aerial supervision (leadplane or Aerial Supervision Module) is required by contract and interagency policy for VLATs while dropping retardant.
- The leadplane or ASM must be on scene prior to dispatching the VLAT.
- VLATs are less maneuverable than large airtankers and should be used in less challenging terrain that affords better maneuverability and effectiveness for dispensing.

### The VLATs minimum drop height is 200 feet above the top of the vegetation with a target height of 250 feet. VLATs minimum drop height is 250 feet above the ground or canopy cover whichever is higher. Generally, drop heights should increase when using higher coverage levels.
- VLATs require considerable more space and clearance from other aircraft within the FTA and more time to set up for drops.
- Airtanker bases approved for VLATs are listed in the NWCG Airtanker Base Directory.

State of Alaska Airtankers

Canadian registered CV-580 airtankers under contract to the State of Alaska can be mobilized to the lower 48 as approved cooperator aircraft. These airtankers have been approved by OAS under 351 DM 4 and OPM-53 for interagency use. Operationally they can be used similar to other federally-contracted airtankers and can be directed by U.S. ASM/leadplanes or Canadian Bird Dogs.

Canadian Airtankers and Water Scoopers

Canadian airtankers and scoopers can be activated through the NIFC/CIFFC agreement or through Compacts (US State-to-Canadian Province). These Canadian airtankers and water scoopers typically operate as a “group” with Canadian Bird Dogs as part of their operational model. Bird Dogs have a Canadian Air Attack Officer (AAO) on board and function similar to a U.S. ASM.

### NIFC/CIFFC Ordered Canadian Aircraft – Aircraft ordered through the National Interagency Fire Center agreement with the Canadian Interagency Forest Fire Center may be used on federal lands if the aircraft have been inspected and approved by USDA Forest Service/ Department of the Interior letter.
- Compact Ordered Aircraft – Aircraft and flight crews ordered through U.S. State to Canadian Province compacts will be considered non-federally approved Cooperator aircraft, unless they have been previously inspected and approved by the USDA Forest Service/ Department of the Interior.
The standard operating procedure for the Canadian Airtanker and Water Scooper Groups is as follows:

- Canadian airtankers must be supervised by a Bird Dog or U.S. ASM/leadplane, and must include at a minimum a low level “show me” pass.
- Canadian Bird Dogs may provide low level target identification runs (“show me” pass) for either Canadian or US contracted airtankers.
- Canadian Bird Dogs are not authorized to “lead” U.S. federally-contracted airtankers.
- Canadian Bird Dogs can perform the functions of an ATGS.
- U.S. ASM/leadplanes are authorized to “lead” Canadian airtankers.
- Canadian water scoopers can operate with or without their Bird Dog. They do not require aerial supervision unless they request it.

Airtanker Rotation
The federal national airtanker fleet includes a mix of Exclusive Use (EU), Call When Needed (CWN)/On-Call Type 1 and Type 2 airtankers (Large Airtankers/LATs), Very Large Airtankers (VLATs), or Single Engine Airtankers (SEATs). To ensure consistent utilization, rotation, and management of the national airtanker fleet, the following is interagency direction for the management of airtanker rotation and supplements direction contained in NWCG Standards for Airtanker Base Operations (PMS 508) and in Interagency SEAT Operations Guide NWCG Standards for Single Engine Airtanker Operations (PMS 506).

All LATs, VLATs and SEATs (including federally-approved Cooperator and Canadian) operating from the same base shall be dispatched in rotation based on the type of airtanker requested on a first in/first out basis regardless of contract type (EU, CWN/On-Call or Forest Service owned) or the location of the incident.

First in/first out also applies to airtankers that are requested for a load/return. When an incident requires multiple loads of retardant, Aerial Supervisors/Incident Commanders will notify the appropriate dispatch center of the need for additional retardant and any operational retardant delivery requirements. To ensure timely and effective retardant delivery, dispatch will order the next available airtanker in rotation if an airtanker that meets the requirement of the request is available and located at the load and return airtanker base.

Exceptions
1. Airtankers that do not have an Initial Attack (IA) rated Pilot-in-Command will not be dispatched to a fire unless a leadplane or Aerial Supervision Module (ASM) is on scene upon the arrival of the airtanker.
2. Incident commanders/aerial supervision requests a specific type of resource (e.g., VLAT, LAT, or SEAT).
3. On-scene aerial supervision determines that the use of a specific make/model airtanker is not effective based on factors such as risk, maneuverability in terrain, and/or effectiveness.

4. The next airtanker in rotation has an operating restriction at the base where it is being assigned. Operating restrictions may include fuel and retardant availability, airtanker base or airport restrictions, significant downloading of fuel or retardant based on performance, daylight remaining, or distance to the incident is not considered effective.

5. Repositioning of an airtanker closer to where their maintenance crews or supplies are available. The National Interagency Coordination Center (NICC) will facilitate in coordination with the Geographic Area Coordination Center (GACC).

6. A benefit to the government would be realized by changing the rotation. This will be facilitated by the GACC or NICC with consideration to days off, mission requirements, and/or anticipated need.

7. Airtankers are returning after day(s) off. Upon returning to availability from days off, these airtankers will be at the end of the rotation at the airtanker base. Airtankers that work a seven day schedule retain their position in the rotation.

8. MAFFS, NICC ordered state cooperators, and NICC ordered Canadian airtankers will begin rotation at that base after the contracted and FS owned airtanker(s) at the beginning of each day.

9. Water Scoopers will not be included in airtanker base rotations.

**Rotation of State Airtankers**

Rotation of State resources on State incidents at a state airtanker base is established by their agency. In cases where federally-approved State airtankers are operated in conjunction with federally-contracted airtankers on an incident primarily on federal lands, the State airtankers are added to the rotation after the federal airtankers at the beginning of each day.

**Additional Information**

Forest Service/DOI contracted airtankers, when assigned to incidents managed by other agencies or state cooperators remain under the direction of the Contracting Agency. Forest Service and DOI Contracted airtankers are bound only by their contract and will be treated fairly and equitably during their assignment with other federal or state agencies.

**Airtanker Payloads**

Loading Type 2, Type 1 or VLAT airtankers with water or dropping water operationally shall not occur unless the Forest Service National Airtanker Program Manager has been notified. Use of water operationally from these airtankers will require the following prior to notification:
Use of retardant is restricted by the fire management plan (FMP) for the unit requesting the approval to use water. A copy of the section of the FMP restricting use of retardant shall be provided to the Airtanker Program Manager with the notification.

- Prior to ordering an airtanker, the receiving unit should request the appropriate water aerial dispensing aircraft, such as a water scooper or helicopter.

During pre or post season fires, loading airtankers with water may be necessary when the nearest airtanker base may not be operational and capable of loading retardant. Once an airtanker base is operational and can load retardant, use of water shall cease.

Use of water enhancers (gels) is strictly prohibited in Type 2, Type 1 or VLAT airtankers contracted by the USDA Forest Service.

Large and Very Large Airtanker Coordination

National coordination and management of Forest Service contracted airtankers is required to ensure there is airtanker coverage, response, and capability nationwide. The Forest Service Airtanker Program Manager and Forest Service Fixed-wing Coordinator coordinate and manage airtanker readiness and availability, capability, and response with vendors, National Aviation staff, and the National Interagency Coordination Center.

Airtanker Base Operations

Certain parameters for the operation of airtankers are agency-specific. For dispatch procedures, limitations, and times, refer to geographic area mobilization guides and the NWCG Standards for Airtanker Base Operations (SABO).

All permanent, CWN and temporary bases will have an Airtanker Base Operations Plan (ABOP), and a qualified Airtanker Base Manager (ATBM) prior to operations out of the airtanker base airport. All personnel conducting airtanker base operations should review the SABO and have it available.

ATBM’s are authorized to manage Single Engine Airtankers (SEAT), the ATBM should review the NWCG Standards for Single Engine Airtanker Operations and have it available. Both Large Airtankers as well as SEATs have applicable aircraft contracts that will be available for reference, as well as the National Long-Term Fire Retardant Contract.

### Regions, States, and GACC shall coordinate airtanker base activation and closing dates with the appropriate agency Airtanker Base Specialist to ensure national airtanker response and capability is maintained.

- **FS** – National job codes for airtanker base early activation or late closing is available to support national response and capability.

Loading Operations
Forest Service contracted airtankers and Modular Airborne Firefighting System (MAFFS) airtankers shall be loaded using a Mass Flow Meter to measure the payload in pounds. Refer to the Forest Service Airtanker Operations Plan for more information.
https://www.fs.fed.us/managing-land/fire/aviation/publications

Airtanker Base Personnel
There is identified training for the positions at airtanker bases; the SABO contains descriptions of Airtanker Base support positions and their roles and responsibilities. The NIMS Wildland Fire Qualification System Guide NWCG Standards for Wildland Fire Position Qualifications (PMS 310-1) lists required training for these positions.

The ATBM provides supervision and coordination of airtanker base operations. The ATBM may report to the local Aviation Manager and/or Incident Aviation Manager.

Startup/Cutoff Time for Multi Engine Airtankers
Refer to the Interagency Aerial Supervision Guide Interagency Standards for Aerial Supervision (PMS 505).

Single Engine Airtankers

Single Engine Airtanker (SEAT) Operations, Procedures, and Safety
The NWCG Standards for Single Engine Airtanker Operations (PMS 506) defines operating standards and is policy for both the DOI and FS. All permanent and temporary SEAT bases will have a SEAT Base Operating Plan, and a qualified Single Engine Airtanker Manager (SEMG) or ATBM prior to operations out of the SEAT base airport.

Single Engine Airtanker Manager Position
The SEMG duties and responsibilities are outlined in the NWCG Standards for Single Engine Airtanker Operations. The PMS 310-1 lists required training for the SEMG position, ATBM position, and other base support positions. SEMG’s may also refer to the NWCG Standards for Airtanker Base Operations (SABO) for base support duties and responsibilities.

The SEMG provides supervision and coordination of SEAT base operations and base support personnel. The SEMG may report to the local Aviation Manager, Incident Aviation Manager, or ATBM if applicable. SEMG’s assist in ensuring adherence to contract regulations, safety and policy requirements, and fiscal accountability.

Operational Procedures
Using SEATs in conjunction with other aircraft over an incident is standard practice. Agency or geographical area mobilization guides may specify additional procedures and limitations.
Depending on location, operator, and availability, SEATs are capable of dropping suppressants, water, or approved chemical retardants. Because of the load capacities of the SEATs (500 to 800 gallons), quick turn-around times should be a prime consideration.

SEAT operations at established airtanker bases or reload bases are authorized. All BLM and FS Airtanker base operating plans will permit SEAT loading in conjunction with large airtankers.

### Multi-Engine Water Scoopers

Forest Service contracted exclusive use and CWN multi-engine water scoopers are national resources. Geographic areas administering these aircraft will make them available for initial attack and extended attack fires on a priority basis. Generally, a water scooper manager will be assigned by the Forest Service National Aviation Office. The manager will be on site to coordinate water scooper operations, logistics and water body assessment.

Forest Service multi-engine water scoopers, by contract, shall not use retardant, foam or gels.

### Smokejumper Pilots

The *Interagency Smokejumper Pilot Operations Guide* (ISPOG) serves as policy for smokejumper pilot qualifications, training, and operations.

### Helicopters

#### Helicopter Types

The minimum specifications for the typing of helicopters are by allowable payload, number of passenger seats and water or retardant carrying capability.

The *National Interagency Mobilization Guide*, Chapter 50, contains additional direction regarding staffing and maintenance support functions to mobilize national resources. For aviation safety and policy concerning wildland fire chemicals (water enhancers, retardants and foams), reference https://www.fs.fed.us/rm/fire/wfcs/. Other helicopter information can be found...

- **FS** – There will be NO on-board mixing of wildland fire chemicals on Forest Service-owned, contracted, chartered or leased aircraft. Use of water enhancers in large dip tanks or pumpkin tanks is not recommended, unless the Qualified Product List (QPL) approved mix ratio can be maintained with the constantly changing water/gel mixture and ratio during operations. The ability to maintain the QPL mix ratio is highly unlikely.

### Military or National Guard Helicopters and Pilots

The Military Use Handbook (NFES 2175) will be used when planning or conducting aviation operations involving regular military aircraft. Ordering military resources is done through the National Interagency Coordination Center (NICC); National Guard resources are utilized through local or state Memorandum of Understanding (MOU).

### Modular Airborne Fire Fighting System (MAFFS)

The MAFFS Operating Plan (available from the National Interagency Coordination Center) will be used when planning or conducting aviation operations involving MAFFS military aircraft. Ordering MAFFS is done through the National Interagency Coordination Center (NICC); MAFFS are utilized through a national agreement (see the National Interagency Mobilization Guide). Several states have the ability to activate MAFFS through separate agreements that do not require ordering through NICC.

### Cooperator Aircraft

Aircraft procured/owned by cooperating agencies (state, local, and international) may be utilized on federally managed fires when cooperative agreements are in place and the aircraft have been approved by letter nationally or regionally.

The purpose of this direction is to keep non-federally approved aircraft under the operational control of the agency providing the aircraft, to the extent possible.

States may use aircraft that have not been identified as an “Approved Cooperator Aircraft” on federal lands when and where the state is the protecting agency in a reciprocal or offset agreement or when state lands are threatened and the state maintains operational control of the aircraft.

The following conditions apply for non-federally approved aircraft:

- No federal employees are allowed to ride on board the aircraft.
- No federal employee may be assigned to a position that exercises contractual control.
- They are approved to have federal personnel load retardant at federal air tanker bases, regardless of jurisdiction.
• Federal personnel may provide aerial supervision (ATGS, ASM, HELCO, leadplane) under existing standard procedures and agreements.
• They remain under state operational control regardless of the agency affiliation of the firefighters directing the aircraft on an incident with state jurisdiction.
• They are approved to interact with federal dispatch personnel as long as the aircraft remains under the operational control of the state or for safety reasons.

Under emergency circumstances, where human life is immediately at risk by wildland fire on lands under federal protection, a federal line officer can approve the use of non-federally approved aircraft to address the immediate threat. Under circumstances where a Governor has declared a state of emergency, a federal line officer at the State/Regional level, may consider any fire under federal protection, as an immediate threat to human life. This exemption must only take place when sufficient federal firefighting aircraft are not readily available to meet the emergency need. Line officers are encouraged to consult with their agency aviation management personnel to aid in decision-making.

As exemptions are exercised, they must be documented by the approving federal line officer in accordance with their agency’s guidance to include submitting a SAFECOM within 24 hours.

Cooperator contracted aircraft also on an existing federal contract with federal aircraft and pilot cards may be utilized on federally-managed fires when cooperative agreements are in place and the aircraft have been approved by USDA Forest Service/Department of the Interior letter.

Cooperator exclusive use contracted aircraft not on an existing federal contract with federal aircraft and pilot cards may be considered for approval on a case by case basis when cooperative agreements are in place.

Cooperator owned or operated aircraft may be utilized on federally-managed fires when cooperative agreements are in place and the aircraft have been approved by USDA Forest Service/Department of the Interior letter.

All Cooperator used on federally-managed fires must be approved by USDA Forest Service/Department of the Interior letter.

Utilization of approved Cooperator aircraft shall be limited based on 49 United States Code §40125.
• All approved Cooperator aircraft used on federally-managed fires shall be released when federal aircraft become reasonably available.
• The use of Cooperator aircraft must involve a “significant and imminent threat to life or property” documented daily on the Cooperator Aircraft Use Validation Worksheet (National Mobilization Guide Chapter 80 Forms) to document the justification for aircraft utilization.

### Non-Federally Approved Cooperator Aircraft

All approved Cooperator aircraft used on federally-managed fires shall be released when federal aircraft become reasonably available.
The use of Cooperator aircraft must involve a “significant and imminent threat to life or property” documented daily on the Cooperator Aircraft Use Validation Worksheet (National Mobilization Guide Chapter 80 Forms) to document the justification for aircraft utilization.
Cooperator aircraft that have not been approved by USDA Forest Service/Department of the Interior letter may be utilized on federal lands when and where the Cooperator is the protecting agency in a reciprocal or off-set agreement or when Cooperator lands are threatened and the state maintains operational control of the aircraft.

The following conditions apply for non-federally approved aircraft:

- No federal employees are allowed to ride on board the aircraft.
- No federal employee may be assigned to a position that exercises contractual control.
- Federal personnel may load retardant at federal airtanker bases, regardless of jurisdiction.
- Federal personnel may provide aerial supervision (ATGS, ASM, HLCO, leadplane) under existing standard procedures and agreements.
- They remain under state operational control regardless of the agency affiliation of the firefighters directing the aircraft on an incident with state jurisdiction.
- They are approved to interact with federal dispatch personnel as long as the aircraft remains under the operational control of the state or for safety reasons.

Under emergency circumstances, where human life is immediately at risk by wildland fire on lands under federal protection, a federal line officer can approve the use of non-federally approved aircraft. This exemption must only take place when sufficient federal firefighting aircraft are not readily available to meet the emergency need. Federal line officers are encouraged to consult with their agency aviation management personnel to aid in decision-making.

As exemptions are exercised, they must be documented by the approving federal line officer in accordance with their agencies guidance to include submitting a SAFECOM (https://www.safecom.gov/) within 24 hours.
Chapter 17

Fuels Management

Introduction

The purpose of the Fuels Management (FM) programs within the Department of the Interior (DOI) and the Forest Service (FS) is to reduce hazardous fuels and risks to human communities and improve the health of the land by creating fire-resilient landscapes and restoring fire-adapted ecosystems.

The DOI and FS, along with other federal, state, Tribal, and local partners, will work to ensure effective FM efforts are collectively planned and implemented. These efforts will be consistent with the direction provided in:

Policy

The federal fire agencies use the Interagency Prescribed Fire Planning and Implementation Procedures Guide (PMS 484) to manage prescribed fire activities. This guide provides standardized procedures specifically associated with the planning and implementation of prescribed fire.

Fuels Management – Policy, project planning and implementation priorities, and standards common to all agencies:

- The safety of firefighters and the public is the number one priority when planning and implementing projects/treatments;
- All projects/treatments will support resource management objectives as identified in their agency-specific Land/Resource Management Plans;
- All projects/treatments will have plans that contain measurable objectives;
- All projects/treatments will comply with National Environmental Policy Act (NEPA) and all other regulatory requirements;
- All projects/treatments will be tracked and progress will be reported within required timeframes; and
- All projects will be monitored to determine if treatment objectives were met and to document weather, fire behavior, fuels information, and smoke dispersion. Evaluation reports are to be completed and maintained in the project file.

Some programmatic differences are identified in the following agency-specific documentation and serve as agency-specific direction.

- NPS – Refer to RM 18.
FS – Refer to FSM 5140.

Reporting Fuels Management Accomplishments

The Hazardous Fuels Reduction (HFR) Module of the National Fire Plan Operations and Reporting System (NFPORS) is the national system for submitting proposed projects for approval, tracking accomplishments of the program, reporting performance, measuring accomplishments, and accountability for all agencies in the Department of Interior.

Forest Service fuels management accomplishments are entered into the Forest Service Activity Tracking System (FACTS) as the official system of record for tracking and reporting. This data is shared with NFPORS to facilitate interagency joint reporting needs.

Information on FACTS can be found at https://fsweb.ftcol.wo.fs.fed.us/frs/facts/index.shtml. Acres treated through Forest Service funded State Fire Assistance grants are recorded directly in NFPORS.

Reporting Fuels Treatment Effectiveness Monitoring (FTEM)

Anytime a wildfire starts in or interacts with a fuel treatment area, policy for all agencies requires that we document the outcome to examine whether the treatment had the desired effect of reduced fire behavior and/or provided opportunities to firefighters for effective management of the wildfire.

- BLM – Offices will complete a fuels treatment effectiveness assessment and input appropriate information into the Fuels Treatment Effectiveness Monitoring (FTEM) online tool for all wildfires which start in, burn into, or burn through any portion of a fuel treatment area that has been completed and reported in the Hazardous Fuels Module of the National Fire Plan Operations and Reporting System (NFPORS) from fiscal year 2003 to present. If offices have wildfire/treatment intersections that have occurred prior to 2003 or are not in NFPORS, as long as offices can document that fuels dollars were expended on these treatments and the wildfire is recorded in the Wildland Fire Management Information (WFMI) system, the record should be entered into FTEM. It is important that treatment data entered into FTEM are consistent with the NFPORS, and that wildfire information is consistent with the WFMI system. Refer to FA IM-2015-001. Refer to MS-9214 and H-9214-1.

- NPS – Refer to RM 18 and Documenting Hazardous Fuels Reduction Program Treatment Effectiveness Memo, 10/09/2012.

- FWS – Refer to Fire Management Handbook, Chapter 17 Refer to Fish and Wildlife Service Fire Management Reporting Requirements and Timelines Memo found on the FWS Sharepoint Site. https://fishnet.fws.doi.net/regions/9/nwrs/fire/Shared%20Documents/Memo’
Reporting Planned Fuels Treatments Burned in a Wildfire

For NPS and FWS, acres burned in a wildfire may only be reported in the NFPORS Hazardous Fuels Reduction Module as “Fire Use” if all the following conditions are met:

1. The area burned was in a pre-existing NFPORS treatment unit;
2. The accomplishment has been approved from the Regional and/or National level;
3. NEPA is complete; and
4. The planned objectives were met.

   • **BLM** – Offices will report (using instructions from Attachment 1 of IM FA-2017-034) all acres burned in a naturally-caused wildfire (accomplishments of resource objectives for known human-caused fires will not be reported) that accomplish resource objectives in the HFR module of NFPORS when:
     1. An interdisciplinary team approach is used to determine the specific burned acres where LUP resource objectives were met by wildfire; and
     2. An Agency Administrator approves the determination and notifies the State Fuels Lead/Specialist. Together they ensure appropriate reporting in NFPORS.

   • **FS** – Acres burned from an unplanned natural ignition may be reported as “Fire Use” accomplishment if the resulting fire effects meet objectives from the Land and Resource Management Plan or project-specific NEPA decision document. Human-caused wildfires may not be counted as accomplishment toward target regardless of the outcome. See Reporting of Wildfire Acres That Meet Resource Management Objectives section below for additional information.

Reporting of Wildfire Acres That Meet Resource Management Objectives

Acres burned in a wildfire that achieve resource management objectives as defined in Land and Resource Management Plans/Fire Management Plans (LRMP/FMP) will be reported in the NFPORS Non-National Fire Plan (Non-NFP) module. While strategies for managing individual wildfires are established through the fire management decision process, the identification of acres which achieved LRMP/FMP objectives should be made after the fire is declared out, regardless of the fire management objective, strategy or tactic used (e.g., even though a wildfire strategy may be full suppression, the effects of a wildfire on...
resources may be beneficial). The determination of benefit must be based on land management objectives which are affected by fire severity, intensity, and other fire impacts. Post-fire impact, such as invasion of exotic species and the need for rehabilitation, should be considered in this determination. At a minimum, acres reported in the Non-NFP module must meet the following criteria:

- The LRMP/FMP supports attainment of resource benefit through use of fire;
- An interdisciplinary approach is used to determine whether the LRMP/FMP objectives were met; and
- Line manager approves the determination.

○ **FS** – Direction for reporting accomplishments from unplanned ignitions is found in the Hazardous Fuels Reduction Treatments Tracking and Accomplishments Reporting Requirements document posted on the FACTS support page at https://fsweb.fscol.wo.fs.fed.us/frs/facts/support/documents/index.shtml.

### Prescribed Fire During Preparedness Levels 4 and 5

Approval at the Regional or State Office level is required prior to ignition of prescribed fires at National Preparedness Levels 4 and 5. Approving officials should consider relative risks and opportunities as well as availability of local resources to implement without the need for additional outside resources that could add additional strain on resource availability nationally. To limit the potential for mixed messages when at GACC or National Preparedness Levels 4 and 5, agencies should coordinate information on planned implementation of prescribed fires with interagency partners at the local, GMAC and NMAC levels,

- **BLM** – The State Director or designee will approve prescribed fire at National or Geographic Area Preparedness Level 4 or 5.

- **NPS** – At National Preparedness Level 4 or 5, concurrence from NPS Branch of Fire Management must be obtained prior to implementing prescribed fires. At Geographic Area Preparedness Level 4 or 5, NPS Regional Fire Management concurrence must be obtained prior to implementing prescribed fires.

- **FWS** – During Geographic Area Preparedness Level 4 or 5, written concurrence from RFMC is required prior to ignition. During National Preparedness Level 5, concurrence from Headquarters, Branch of Fire Management must be obtained prior to implementing prescribed fires. Refer to FMH, Chapter 17 for additional information.

- **FS** – The Regional Forester will approve or disapprove new prescribed fires or continue existing prescribed fire at National Preparedness Levels 4 and 5 or if National Fire Danger Rating System forecasted adjective rating...
is “Extreme” for the county that the prescribed fire is located or any

- **BIA** – At National Preparedness Levels 4 and 5, prescribed fire (Rx)
  applications can be initiated or continued if the proposed action is
  approved by an agency at the Regional level. The approval must be based
  on an assessment of risk, impacts of the proposed actions on Area resources
  and activities, and include feedback from the GMAC. At National
  Preparedness Level 5, for Rx applications to be initiated or continued that
  require additional support of resources from outside the local unit or
  require resource ordering of an IMT, the Regional Fuels Specialist must
  prepare a written justification to request permission to implement a new
  prescribed fire and submit to the BIA Director of Fuels Management. A
  National MAC representative will assess risk and impacts of the proposed
  action(s) and present to NMAC for review prior to proceeding. The final
  decision to implement resides with the implementing agency.

### Federal Agencies Assistance

Reference Section VI of the Interagency Agreement for Wildland Fire
Management among the Bureau of Land Management, Bureau of Indian Affairs,
National Park Service, Fish and Wildlife Service of the United States
Department of The Interior, and the Forest Service of the United States

Agencies will enter into separate agreements for personnel and other resources
provided for planning and implementation of fuels management treatments and
activities. This may or may not result in an exchange of funds subject to the
applicable statutory authority used.

- **FS** – USFS units will make every attempt to establish agreements in
  advance when planning to utilize resources from cooperating agencies to
  implement or respond as contingency resources for prescribed fire.
  However, for prescribed fire activities and exigent circumstances, where an
  agreement was not executed and funds were not obligated prior to
  commencing work, a ratification may not be necessary if an approved
  agreement is executed and funds obligated on I-web within 30 calendar
days of the start of work. See FSH 1509.11 Chapter 10, Section 15.81.

- **BIA** – Refer to Bureau of Indian Affairs Fuels Management Business Rules,

### Hazard Pay/Environmental Differential for Prescribed Fire

**Implementation**

Current policy is that hazard pay will not be paid for any prescribed fire. Under
certain circumstances, (i.e., low level flight operations), hazard pay or
environmental differential may be warranted. Offices should contact their
servicing personnel office with specific questions.
Non-NWCG Agency Personnel Use on Prescribed Fire

For information regarding use of non-NWCG agency personnel on prescribed fires, see Chapter 13.

Use of Contractors for Prescribed Fire Implementation

Agencies can contract to conduct all or part of the planning and implementation of prescribed fire operations and/or all or part of mechanical treatments for fuels management projects. Contractors must meet **NWCG PMS 310-1** qualification requirements and agency standards for specific skill positions for prescribed fire operations.

If a contractor is actively involved in igniting, holding, or mopping up an agency prescribed fire, a Contracting Officer’s Authorized Representative (COR) or Project Inspector (PI) will be on site (exceptions can be made for late stage mop up and patrol) to ensure that the prescribed fire objectives are being met and that the terms of the contract are adhered to. The Agency Administrator and/or FMO will determine the qualifications required for the agency representative (COR or PI).

- **BLM** – Refer to H-9214-1, Chapter 5-3, Contractor and Cooperator Prescribed Fire Plan development and Implementation.
- **FS** – Contractors must meet requirements for any specific skill positions for prescribed fire operations as described in **NWCG PMS 310-1** or FSH 5109.17 for positions not found in the PMS 310-1 (e.g., RXB3). Reference FSM 5140.

Use of AD Pay Plan for Prescribed Fire

Refer to the DOI Administratively Determined (AD) Pay Plan for Emergency Workers (Casuals) for information regarding the use of emergency workers for prescribed fire. The DOI AD Pay Plan does not allow for use of Casuals for mechanical or chemical treatment fuels reduction projects.

Forest Service does not have this authority.

Activation of Contingency Resources

In the event contingency resources are activated, sending units should respond and support the requesting agency immediately.

Non-fire Fuels Management Activities

For policy, guidance, and standards for implementation of non-fire fuel reduction treatments (e.g., mechanical, biological, chemical), refer to agency-specific policy and direction.
Chapter 18
Reviews and Investigations

Introduction

### When an accident occurs, each agency will meet their agency-specific accident investigation reporting requirements (e.g., DOI Safety Management Information System (SMIS) or USDA eSafety).

Reviews and investigations are used by wildland fire and aviation managers to assess and improve the effectiveness and safety of organizational operations.

Information (other than factual) derived from safety reviews and accident investigations should only be used by agencies for accident prevention and safety purposes.

Multiagency Cooperation

Many reviews and investigations involve cooperation between federal, state, county, and municipal agencies. To comply with each agency’s authorities, policies, and responsibilities, a multiagency review or investigation may be necessary. A multiagency Delegation of Authority should be provided to outline roles, responsibilities, and expected deliverables.

The Team Leader or delegating official(s) should establish cooperative relationships with the other agencies involved in the review or investigation to ensure policies and responsibilities are met. This may involve negotiations, cooperative agreements, and coordination with the agency Designated Agency Safety and Health Official (DASHO) or the agency official who signs the Delegation of Authority.

Federal Interagency Investigations

Close calls or accidents that involve interagency (USFS or DOI) personnel and/or jurisdiction (e.g., USFS firefighter injured on FWS jurisdictional wildland fire and vice versa) shall be reviewed or investigated cooperatively and conducted at the appropriate level as outlined in this chapter.

Agency Administrators will ensure that affected agencies are involved throughout the review/investigation process.

When an incident does not meet the serious accident criteria, the affected Agency Administrators should jointly decide what type and level of investigation will be conducted based on agency processes outlined in this chapter. Questions should be addressed to your agency Wildland Fire Safety Program Manager.

Reviews

Reviews are methodical examinations of system elements such as program management, safety, leadership, operations, preparedness, training, staffing,
business practices, budget, cost containment, planning, and interagency or intra-agency cooperation and coordination. Reviews do not have to be associated with a specific incident. The purpose of a review is to ensure the effectiveness of the system element being reviewed, and to identify deficiencies and recommend specific corrective actions. Established review types are described below and include:

- Preparedness Reviews
- After Action Reviews
- Fire and Aviation Safety Team Reviews
- Safety Assistance Team Visits
- Aviation Safety and Technical Assistance Team Reviews
- Large Fire Cost Reviews (FS)
- Significant Wildland Fire Reviews (DOI)
- Individual Fire Reviews
- Lessons Learned Reviews
- Rapid Lesson Sharing
- Declared Wildfire Reviews
- Notice of Air Quality Exceedance (NOV) Reviews

**Preparedness Reviews**

Preparedness Reviews assess fire programs for compliance with established fire policies and procedures outlined in the current *Interagency Standards for Fire and Fire Aviation Operations* and other pertinent policy documents.

Preparedness Reviews identify organizational, operational, procedural, personnel, or equipment deficiencies, and recommend specific corrective actions. Interagency Preparedness Review Checklists can be found at [https://www.nifc.gov/policies/pol_ref_intgncy_prepcheck.html](https://www.nifc.gov/policies/pol_ref_intgncy_prepcheck.html).

**After Action Reviews (AAR)**

An AAR is a learning tool intended for the evaluation of an incident or project in order to improve performance by sustaining strengths and correcting weaknesses. An AAR is performed as soon after the event as possible by the personnel involved. An AAR should encourage input from participants that is focused on:

- What was planned?
- What actually happened?
- Why it happened?
- What can be done the next time?

An AAR is a tool that leaders and units can use to get maximum benefit from the experience gained on any incident or project. When possible, the leader of the incident or project should facilitate the AAR process. However, the leader may choose to have another person facilitate the AAR as needed and appropriate. AARs may be conducted at any organizational level. However, all AARs involve the exchange of ideas and observations, and focus on improving proficiency. The AAR should not be utilized as an investigational review. The
format can be found in the Interagency Response Pocket Guide (IRPG), PMS 461, NFES 1077. Additional AAR information is available at ###
https://www.fireleadership.gov/toolbox/after-action-review/index.html

Fire and Aviation Safety Team (FAST) Reviews
Fire and Aviation Safety Teams assist Agency Administrators during periods of high fire activity by assessing policy, rules, regulations, and management oversight relating to operational issues. They can also do the following:
- Provide guidance to ensure fire and aviation programs are conducted safely;
- Assist with providing immediate corrective actions;
- Review compliance with OSHA abatement plan(s), reports, reviews, and evaluations; and
- Review compliance with Interagency Standards for Fire and Fire Aviation Operations.

FAST reviews can be requested through geographic area coordination centers to conduct reviews at the state/regional and local level. If a more comprehensive review is required, a national FAST can be ordered through the National Interagency Coordination Center.

FASTs include a team leader, who is either an Agency Administrator or fire program lead with previous experience as a FAST member, a safety and health manager, and other individuals with a mix of skills from fire and aviation management.

FASTs will be chartered by their respective Geographic Area Coordinating Group (GACG) with a Delegation of Authority, and report back to the GACG.

FAST reports will include an executive summary, purpose, objectives, methods/procedures, findings, recommendations, follow-up actions (immediate, long-term, national issues), and a letter delegating authority for the review.

FAST reports should be submitted to the GACG with a copy to the Federal Fire and Aviation Safety Team (FFAST) chair within 30 days. See Appendix L for sample FAST Delegation of Authority.

Safety Assistance Team (SAT) Visits
In addition to FAST reviews, SAT visits emphasize engaging individual firefighters, managers, and administrators to grasp potential issues, with a focus on firefighting safety fundamentals. SAT visits are not inspections. SATs are often ordered when activity within an area escalates rapidly, or when a high level of activity has been occurring for a long time. SATs can be single agency or interagency in scope and composition.

The goals of a Safety Assistance Team are to:
- Assist fire managers and IMTs with site visits with firefighters, fire managers, and program leaders.
- Be service oriented, assisting the local units.
• Provide early warning of potentially hazardous conditions or situations.

Direct intervention, circumventing normal chain of command, is authorized when necessary; however, the overall objective is to create a work environment where the normal operating procedures are responsible for safe practices.

Aviation Safety and Technical Assistance Team (ASTAT) Reviews
Refer to Chapter 16 for ASTAT information.

Large Fire Cost Reviews (FS)
A Large Fire Cost Review may be conducted at the discretion of the Washington Office, at the request of the Regional Office, or when requested by multi-jurisdictional cooperators.

Significant Wildland Fire Reviews (DOI)
A Significant Wildland Fire Review will be conducted when an incident (single fire or complex) meets or exceeds federal combined expenditures of $15 million in suppression costs, and more than 50% of the burned acres are managed by one or more DOI bureaus.

A review may also be conducted when an incident (single fire or fire complex) meets or is expected to meet one or more of the following criteria:
• There are significant political, social, natural resource, complexity, size, or policy issues;
• There are significant and complicated cost-share or multi-jurisdictional issues; or
• The affected agency/Agency Administrator requests a review.

### BLM – A review may also be conducted when there are significant natural resource concerns, including impacts to sagebrush rangelands where fires burn more than 50,000 acres; or there are policy, political, social, or economic concerns including significant impacts to infrastructure and energy related corridors; or there are significant and complicated cost-share or multi-jurisdictional issues; or the affected line officer(s) requests a review.

It is the agency’s responsibility to advise the appropriate individual(s) within their agency of the need for a Significant Wildland Fire Review. When a multi-jurisdictional fire requires review, the DOI bureaus will determine which agency will be designated as the lead in the review process.

The Agency will provide a Delegation of Authority to the Significant Wildland Fire Review Team authorizing the implementation of a review. When possible, Significant Wildland Fire Reviews should be conducted when the Incident Management Team is still in place to allow prompt access to records and incident personnel.

### BLM – The Assistant Director, Fire and Aviation will initiate, facilitate, and provide oversight for the SWFR process ### when BLM is the lead DOI agency. Upon determination of the need for a SWFR, the AD will
coordinate with the appropriate state director and assemble a SWFR team, provide a Delegation of Authority, and initiate the SWFR using direction found at http://web.blm.gov/internal/fire/budget/Reports/Report_Menu_new.htm.
The AD will provide briefings to the Bureau Director, as appropriate.

- **NPS** – Significant Wildland Fire Reviews (SWFR) will be conducted at Management discretion and the Delegating Official may be at the Local, Regional, or National level. See the Agency Administrator and Fire Management Performance Tables in Chapter 3 and the “Review Types and Requirements” table for further information.

**Individual Fire Reviews**

Individual fire reviews examine all or part of the operations on an individual fire. The fire may be ongoing or controlled. These reviews may be local, state/regional, or national. These reviews evaluate decisions and strategies, correct deficiencies, identify new or improved procedures, techniques or tactics, determine cost-effectiveness, and compile and develop information to improve local, state/regional, or national fire management programs.

**Lessons Learned Reviews (LLRs)**

The purpose of a LLR is to focus on the near miss events or conditions in order to prevent similar serious incident in the future. In order to continue to learn from our near misses and our successes explore, investigate, or review unintended outcomes or near misses in order to learn from the event and prevent future occurrences. In order to learn from these events, it is imperative to conduct a LLR in an open, non-punitive manner. LLRs are intended to provide educational opportunities that foster open and honest dialog and assist the wildland fire community in sharing lessons learned information. LLRs provide an outside perspective with appropriate technical experts assisting involved personnel in identifying conditions that led to the unexpected outcome and sharing findings and recommendations.

A LLR should be tailored to the event being reviewed. The scope of the review should be commensurate with the severity of the incident. A LLR will not be substituted for a Serious Accident Investigation (SAI) or Accident Investigation (AI), should the criteria for either of those be met, but may be used as a supplement to the SAI or AI, or other agency-specific accident investigation reporting requirements (e.g., DOI Safety Management Information System (SMIS) or USDA eSafety).

- **NPS** – Facilitated Learning Analysis (FLA) may be used for incidents meeting the AI criteria.
- **FS** – Facilitated Learning Analysis (FLA) may be used for incidents meeting the AI criteria or if a CRP is not being utilized for an incident meeting SAI criteria. A guide for the FLA process is available at http://bit.ly/FLA_guide

https://www.wildfirelessons.net/viewdocument/facilitated-learning-analysis-
Facilitated Learning Analysis (FLA) which may be used for unintended outcomes of all types and the Coordinated Response Protocol (CRP) reserved for FS employee fatality events. Both processes are explicitly non-punitive and must have a delegation signed by a line officer so stating. Where appropriate, and for less serious incidents the FS may also use the Rapid Lesson Sharing (RLS) process or other review process such as After Action Reviews which typically do not have a Line Officer’s delegation. The FS does not use the SAI process but may assist other agencies in a SAI for incidents involving the FS interests or personnel. FS Aviation accidents and incidents utilize the FS Aviation Mishap Investigation process. Current versions of the FLA and CRP guides can be found on the Wildland Fire Lessons Learned Center’s website (https://www.wildfirelessons.net/home).

A LLR will be led by a facilitator not involved in the event. A facilitator should be an appropriate fire management expert who possesses skills in interpersonal communications, organization, and be unbiased to the event. Personnel involved in the event will be participants in the review process. Depending upon the complexity of the event, the facilitator may request assistance from technical experts (e.g., fire behavior, fire operations, etc.).

The LLR facilitator will convene the participants and:

- Obtain a Delegation of Authority from appropriate agency level. See Appendix J for a sample LLR Delegation of Authority;
- Identify facts of the event (sand tables maybe helpful in the process) and develop a chronological narrative of the event;
- Identify underlying reasons for success or unintended outcomes;
- Identify what individuals learned and what they would do differently in the future;
- Identify any recommendations that would prevent future similar occurrences;
- 24- and 72-hour reports may be produced, but are not required; and
- Provide a final written report including the above items to the pertinent Agency Administrator(s) within two weeks of event occurrence unless otherwise negotiated. Names of involved personnel should not be included in this report (reference them by position).

A copy of the final report will be submitted to the respective agency’s national fire safety lead who will provide a copy to the Wildland Fire Lessons Learned Center (LLC). E-mail: llcdocsubmit@gmail.com.

**Rapid Lesson Sharing (RLS)**

RLS is a type of Lessons Learned Review (LLR) for field personnel to quickly share lessons with others. RLS can be used to document and share lessons learned as a result of close calls, minor accidents, successes, efficient ways of
performing work, adaptations, or anything wildland fire personnel can learn from.

To submit or view RLS documents, go to https://www.wildfirelessons.net/resources/rapidlessonsharing.

Declared Wildfire Reviews

Every prescribed fire resulting in a wildfire declaration will receive an Outcome Review. Declared wildfire outcome review direction is found in these agency documents:

- Interagency Prescribed Fire Planning and Implementation Procedures Reference Guide (PMS 484)
  - NPS – Refer to RM-18, Chapter 7 and 17.
  - FS – Refer to FSM 5140.

Declared Wildfire Reviews will be submitted to the Wildland Fire Lessons Learned Center (LLC) by the agency fuels program lead. Submissions should be sent to llcdocsubmit@gmail.com.

Notice of Air Quality Exceedance (NOV) Reviews

A Notice of Air Quality Exceedance (NOV) Review supports understanding of the planning, decisions, and actions taken that contributed to the NOV. https://www.nwcg.gov/publications/484

Investigations

Investigations are detailed and methodical efforts to collect and interpret facts related to an incident or accident, identify causes or conditions that contributed to the accident (organizational factors, local workplace factors, unsafe acts), and develop control measures to prevent recurrence.

In addition to agency-specific accident investigation reporting requirements (SMIS/eSafety), distinct types of wildland fire incidents and accidents have specific investigation requirements.

Wildland Fire Incident and Accident Types and Definitions

- Serious Wildland Fire Accident – An unplanned event or series of events that resulted in death, injury, occupational illness, or damage to or loss of equipment or property. For wildland fire operations, a serious accident involves any of the following:
  - One or more fatalities;
CHAPTER 18 REVIEWS AND INVESTIGATIONS

○ Three or more personnel who are inpatient hospitalized as a direct result of or in support of wildland fire operations;
○ Property or equipment damage of $250,000 or more; and/or
○ Consequences that the Designated Agency Safety and Health Official (DASHO) judges to warrant a Serious Accident Investigation.

• **Wildland Fire Accident** – An unplanned event or series of events that resulted in injury, occupational illness, or damage to or loss of equipment or property to a lesser degree than defined in “Serious Wildland Fire Accident.”

• **Near-miss** – An unplanned event or series of events that could have resulted in death, injury, occupational illness, or damage to or loss of equipment or property but did not.

• **Entrapment** – A situation where personnel are unexpectedly caught in a fire behavior-related, life-threatening position where planned escape routes or safety zones are absent, inadequate, or compromised. Entrapment may or may not include deployment of a fire shelter for its intended purpose. Entrapment may result in a serious wildland fire accident, a wildland fire accident, or a near-miss.

• **Burnover** – An event in which a fire moves through a location or overtakes personnel or equipment where there is no opportunity to utilize escape routes and safety zones, often resulting in personal injury or equipment damage.

• **Fire Shelter Deployment** – The removing of a fire shelter from its case and unfolding it to use as protection against heat, smoke and burning embers.

• **Fire Trespass** – The occurrence of unauthorized fire on agency-protected lands where the source of ignition is tied to some type of human activity.

### Accident investigation types and final reports should be commensurate with the complexity and/or severity of the accident and focus on organizational learning and the prevention of reoccurrence. Investigations and reports may range from large investigation teams producing comprehensive accident investigation reports to first-level supervisors initiating investigations and reporting injury/property damage in their agency-specific reporting systems (SMIS/eSafety). Final accident investigation reports may range between agency-specific accident reports, small one-page Rapid Lessons Sharing, simple or complex Lessons Learned Review reports, to extensive investigation reports that follow the same format as a serious accident.

¹In the event that a wildland fire entrapment or fatality occurs, immediate notification to NICC is required. A ### Wildland Fire Entrapment/Fatality Initial Report Wildland Fire Fatality and Entrapment Initial Report (PMS 405-1) should be ### completed and mailed to NICC electronically or by fax machine submitted to NICC within 24 hours. Submit this report even if some data is missing. The PMS 405-1 is located at https://www.nifc.gov/nicc/logistics/coord_forms.htm.
Higher level management may exercise their authority to determine the type of review or investigation.

- **BLM** – All BLM accidents that involve fire and aviation employees or equipment will be investigated according to the requirements stated in this chapter. Investigations will occur regardless of land jurisdiction. Facts will be collected, causes (organizational factors, local workplace factors, unsafe acts) identified, and an accident investigation report produced. The report will include recommended corrective actions and control measures. Report issuance and follow-up will be through established command channels. BLM Agency Administrators may jointly delegate authority to investigate accidents in cases of mixed jurisdiction or employee involvement. Joint delegations must ensure that BLM investigation requirements are met. The Facilitated Learning Analysis (FLA) process may be used as a supplemental element to required BLM accident investigation processes. When a BLM employee is involved, investigations will occur regardless of land jurisdiction. BLM Agency Administrators may jointly delegate authority to investigate accidents in cases of mixed jurisdiction or employee involvement. Joint delegations must ensure that BLM accident investigation reporting requirements are met.

- **FS** – Forest Service Line Officers are the deciding officials regarding what type of accident investigation or analysis method is to be used for accidents or near misses occurring under Forest Service jurisdiction.

### Investigation Processes

#### Processes Common to All Wildland Fire Accident Investigations

- **Site Protection** – The site of the incident should be secured immediately and nothing moved or disturbed until the area is photographed and visually reviewed by the investigation team. Exact locations of injured personnel, entrapments, injuries, fatalities, and the condition and location of personal protective equipment, property, and other equipment must be documented.

- **Management of Involved Personnel** – Treatment, transport, and follow-up care must be immediately arranged for injured and involved personnel. The Agency Administrator or delegate should develop a roster of involved personnel and supervisors and ensure they are available for interviews by the investigation team. The Agency Administrator should consider relieving involved supervisors from fireline duty until the preliminary investigation has been completed. Attempt to collect initial statements from the involved individuals prior to a Critical Incident Stress Management (CISM) session.

- **Delegation of Authority** – A Delegation of Authority shall be issued to the investigation team leader. The Delegation of Authority will outline roles, responsibilities, and expected deliverables. Delegation of Authority templates are available at https://www.nifc.gov/safety/safety_reptsInvest.html.

- **Critical Incident Stress Management (CISM)** – CISM is the responsibility of local Agency Administrators, who should have individuals...
pre-identified for critical incident stress debriefings. Also refer to the
Agency Administrator’s Guide to Critical Incident Management (PMS 926),
available at https://www.nwcg.gov/publications/926. Individuals or teams
may be available through Employee Assistance Programs (EAPs) or
Geographic Area Coordination Centers (GACCs).

### Wildland Fire Serious Accident Investigation (SAI) Process moved
down in the chapter

For interagency serious accident investigations, a multi-agency Delegation of
Authority to conduct the investigation may be issued. The delegation will ensure
that the investigation meets the policy requirements of involved agencies.

- **BLM/FWS**—The Interagency Serious Accident Investigation Guide
  establishes core direction for BLM, FWS, and interagency serious accident
  investigations (exceptions for aviation accidents are stated in the guide). It
  provides serious accident investigation teams a standardized and
  comprehensive process for conducting serious accident investigations. The

Serious accident investigation reports will be completed, routed, and
disseminated according to processes established in the guide. Reports may
contain information supplemental to the requirements of the guide if it
augments the BLM/FWS’s ability to learn and to develop further
improvements.

The guide may be used entirely or in part for accidents that do not meet the
serious accident definition.

- **FS**—The Forest Service’s response to serious accidents are the Facilitated
  Learning Analysis (FLA) which may be used for unintended outcomes of all
types, and the Coordinated Response Protocol (CRP) reserved for FS
  employee fatality events. Both processes are explicitly non-punitive and
  must have a delegation signed by a line officer so stating. FS Aviation
  accidents and incidents utilize the FS Aviation Mishap Investigation
  process. Current versions of the FLA and CRP guides can be found on the
  Wildland Fire Lessons Learned Center’s website
  (https://www.wildfirelessons.net/home).

**Fire Director Responsibilities**

The Fire Director(s) or designee(s) of the lead agency, or agency responsible for
the land upon which the accident occurred, will:

- Ensure the agency safety manager and Designated Agency Safety and
  Health Official (DASHO) have been notified;
- Immediately appoint, authorize (through Delegation of Authority), and
  deploy an accident investigation team;
- Provide resources and procedures adequate to meet the team’s needs;
- Receive the factual and management evaluation reports and take action to
  accept or reject recommendations.
• Forward investigation findings, recommendations, and corrective action plan to the DASHO (the agency safety office is the “office of record” for reports);
• Convene an accident review board/board of review (if deemed necessary) to evaluate the adequacy of the factual and management reports and suggest corrective actions;
• Ensure a corrective action plan is developed, incorporating management initiatives established to address accident causal factors; and
• Ensure Serious Accident Investigations remain independent of other investigations.

Agency Administrator Responsibilities

• Develop local preparedness plans to guide emergency response;
• Identify agencies with jurisdictional responsibilities for the accident;
• Provide for and emphasize treatment and care of survivors;
• Ensure the Incident Commander secures the accident site;
• Conduct an in-briefing to the investigation team;
• Facilitate and support the investigation as requested;
• Determine need and implement Critical Incident Stress Management (CISM);
• Notify home tribe leadership in the case of a Native American fatality;
• Prepare and issue the required 24-Hour Preliminary Report unless formally delegated to another individual.

Notification

Agency reporting requirements will be followed. As soon as a serious accident is verified, the following groups or individuals should be notified:
• Agency Administrator;
• Public affairs;
• Agency Law Enforcement;
• Safety personnel;
• County sheriff or local law enforcement as appropriate to jurisdiction;
• National Interagency Coordination Center (NICC) through the local dispatch center and GACC. Provide a Wildland Fire Entrapment/Fatality Initial Report (PMS 405–1) directly to NICC within 24 hours;
• Agency headquarters; and
• OSHA will be notified according to agency policy when an employee is killed on the job or suffers a work-related hospitalization, amputation, or loss of an eye. [https://www.osha.gov/report.html](https://www.osha.gov/report.html)
  ○ A fatality must be reported within 8 hours.
  ○ An in-patient hospitalization, amputation, or eye loss must be reported within 24 hours.

Notification to the respective agency’s fire national safety/risk management lead is required.
**Designating the Investigation Team Lead**

The 1995 Memorandum of Understanding (MOU) between the U.S. Department of the Interior and the U.S. Department of Agriculture states that serious wildland fire-related accidents will be investigated by interagency investigation teams.

The Memorandum of Agreement (MOA) between Department of Agriculture Forest Service and Department of Interior augments and provides clarification to the 1995 MOU for investigation type and team lead/deputy team lead/interagency representative designation. The MOA also provides an interagency template for joint Delegation of Authority. The MOA is available at https://www.nifc.gov/safety/safety_reptsInvest.html.

Following initial notification of a serious accident, the agency DASHO will designate a Serious Accident Investigation Team Lead(s) and provide that person(s) with a written Delegation of Authority to conduct the investigation and the means to form and deploy an investigation team.

- **BLM/NPS/FWS**—The agency DASHOs have delegated this responsibility to the respective agency Fire Directors.
- **BLM**—The Fire and Aviation Directorate Safety Program Manager mobilizes SAI teams in coordination with the SAI Team Leader.

Accidents involving more than one agency will require a collaboratively developed Delegation of Authority that is signed by each of the respective agencies.

**Serious Accident Investigation Team (SAIT) Composition**

SAIT members should not be affiliated with the unit that sustained the accident.

- **Team Leader (Core Team Member)**
  
  A senior agency management official, at the equivalent associate/assistant regional/state/area/division director level. The team leader will direct the investigation and serve as the point of contact to the Designated Agency Safety and Health Official (DASHO).

- **Chief Investigator (Core Team Member)**
  
  A qualified accident investigation specialist is responsible for the direct management of all investigation activities. The chief investigator reports to the team leader.

- **Accident Investigation Advisor/Safety Manager (Core Team Member)**
  
  An experienced safety and occupational health specialist or manager who acts as an advisor to the team leader to ensure that the investigation focus remains on safety and health issues. The accident investigation advisor/safety manager also works to ensure strategic management issues are examined. Delegating Officials or their designee may, at their discretion, fill this position with a trained and qualified NWCG Safety Officer, Line (SOFR), Safety Officer, Type 2 (SOF2), or Safety Officer, Type 1 (SOF1).
• **Interagency Representative**

An interagency representative will be assigned to every fire-related Serious Accident Investigation Team. They will assist as designated by the Team Leader and will provide an outside agency perspective. They will assist as assigned by the Team Leader and will provide a perspective from outside the agency.

• **Technical Specialists**

Personnel who are qualified and experienced in specialized occupations, activities, skills, and equipment, addressing specific technical issues such as specialized fire equipment, weather, and fire behavior.

• **Public Affairs Officer**

For investigations with high public visibility and significant news media interest, a public affairs officer (PAO) should be considered a part of the team. The PAO should develop a communications plan for the team, be a designated point of contact for news media, and oversee all aspects of internal and external communications. Ideally, the PAO should be qualified as a Type 1 or Type 2 public information officer and be familiar with SAI team organization and function.

○ **BLM** — All media related documents (news releases, talking points, etc.) should be cleared through NIFC Public Affairs prior to external release.

Core SAIT members are required to take the Interagency Serious Accident Investigation Course 1112-05 prior to serious accident investigation assignment. This training is also required every 5 years for recurrency.

• **BLM/FWS/FS** — This training is required every 5 years to retain currency.

**SAI 24- and 72-Hour Reports**

The final 24-hour report will be approved by the Agency Administrator in concurrence with the SAI delegating official. The 72-hour report will be approved by the SAI delegating official. Both reports are sent to the agency fire safety/risk management lead who will provide a copy to the Wildland Fire Lessons Learned Center (LLC). E-mail: llcdocsubmit@gmail.com.

• **24-Hour Preliminary Report** — This report contains known basic facts about the accident. It will be completed and forwarded by the responsible Agency Administrator to the SAI delegating official. Names of injured personnel will not be included in this report. Personnel may be referenced by position.

• **72-Hour Expanded Report** — This report provides additional factual information, if available. The information may include the number of victims and severity of injuries. The focus should be on information that may have immediate impact on future accident prevention. This report will be completed and forwarded by the SAI team to the SAI delegating official. Names of injured personnel will not be included in this report. Personnel may be referenced by position.

**SAI Final Report**
Within 45 days of the incident, a final report consisting of a Factual Report (FR) and a Management Evaluation Report (MER) will be produced by the investigation team to document facts, findings, and recommendations and forwarded to the Designated Agency Safety and Health Official (DASHO) through the agency Fire Director(s).

- **Factual Report**—This report contains a brief summary or background of the event, and facts based only on examination of technical and procedural issues related to equipment and tactical fire operations. It does not contain opinions, conclusions, or recommendations. Names of injured personnel are not to be included in this report (reference them by position). Post-accident actions should be included in this report (emergency response attribute to survival of a victim, etc.). Factual Reports will be submitted to Wildland Fire Lessons Learned Center (LLC) by the respective agency’s fire safety/risk management leads. E-mail: llcdocsubmit@gmail.com.

- **Management Evaluation Report** (MER) — The MER is intended for internal use only and explores management policies, practices, procedures, and personal performance related to the accident. The MER categorizes findings identified in the factual report and provides recommendations to prevent or reduce the risk of similar accidents.

**Accident Review Board/Board of Review**

An Accident Review Board/Board of Review is used by some agencies to evaluate recommendations, and develop a corrective action plan. Refer to the respective agency’s Safety and Health policy.

**Wildland Fire Accident Investigation (AI) Process**

- **FS** — The Wildland Fire Accident Investigation (AI) Process is not applicable to Forest Service accidents. The Forest Service’s formal Learning Review Processes are the Facilitated Learning Analysis (FLA) which may be used for unintended outcomes of all types and the Coordinated Response Protocol (CRP) reserved for FS employee fatality events. Both processes are explicitly non-punitive and must have a delegation signed by a line officer so stating. Where appropriate, and for less serious incidents the FS may also use the Rapid Lesson Sharing (RLS) process or other review process such as After Action Reviews which typically do not have a Line Officer’s delegation. The FS does not use the SAI process but may assist other agencies in a SAI for incidents involving the FS interests or personnel. FS Aviation accidents and incidents utilize the FS Aviation Mishap Investigation process.

Accident investigations and reports should be commensurate with the complexity and/or severity of the accident and focus on organizational learning and the prevention of reoccurrence. Investigations and reports may...
range from large investigation teams producing comprehensive reports to first-
level supervisors initiating investigations and reporting injury/property damage
in agency reporting systems (e.g., SMIS/eSafety). Final accident
investigation reports may range between agency-specific accident reports, small
one-page Rapid Lessons Sharing, simple or complex Lessons Learned Review
reports, to extensive investigation reports that follow the same format as a
serious accident.

### Notification

When an accident occurs, agency notification requirements will be followed.

Notification requirements universally include:

- Local dispatch center
- Unit Fire Management Officer
- Agency Administrator
- OSHA (refer to Chapter 7 for reporting criteria)

### Investigation Team Membership

Investigation team membership should be commensurate with the complexity
and/or severity of the accident. An investigation team should consist of a team
leader and an adequate number of technical specialists and subject matter
experts. For complex investigations, team membership may also include a chief
investigator, a safety advisor/manager, and additional technical specialists, and a
writer/editor. Team members may have dual roles (e.g., chief investigator/safety
advisor).

### Investigation Methodology

Accident Investigations (AI) are detailed and methodical efforts to collect and
interpret facts related to an accident and to provide specific recommendations to
prevent recurrence. The AI should include the following actions:

- Visual inspection of involved site, equipment, or material;
- Detailed analysis of equipment or material, as necessary;
- Interviews with involved personnel, witnesses, managers, and other
  pertinent persons;
- Collection and review of written statements;
- Review of records, archives, plans, policies, procedures, and other pertinent
documents;
- Consideration of environmental, equipment, material, procedural, and
  human factors as they related to the incident; and
- Development of specific findings and related recommendations for the AI
  report.

### Accident Investigation 24- and 72-Hour Reports

24- and 72-hour reports should be completed when a formal AI will be
conducted. Final 24- and 72-hour reports will be approved by the AI delegating
official, then sent to the agency fire safety/risk management lead who will
provide a copy to the Wildland Fire Lessons Learned Center (LLC). E-mail: llcdocsubmit@gmail.com.

- **24-Hour Preliminary Report** – This report contains known basic facts about the accident. It will be completed and forwarded by the responsible Agency Administrator to the next higher level (e.g., District Manager forwards to State Director). Names of injured personnel will not be included in this report. Personnel may be referenced by position.

- **72-Hour Expanded Report** – This report provides additional factual information, if available. The information may include the number of victims and severity of injuries. The focus should be on information that may have immediate impact on future accident prevention. This report will be completed and forwarded by the AI team to the AI delegating official. Names of injured personnel will not be included in this report. Personnel may be referenced by position.

**Accident Investigation Final Report**

Within ### approximately 45 days of the accident, a final report ### including facts, findings, and recommendations shall be submitted to the senior manager dependent upon the level of investigation (e.g., local Agency Administrator, State/Regional Director, and Agency Fire Director or their designee). If a lower level investigation is conducted, a courtesy copy of the final report shall be sent to the respective agency’s national fire safety/risk management lead.

The Final Report (minus names of employees—they should be referenced by position) will be submitted to Wildland Fire Lessons Learned Center (LLC) by the respective agency’s National Fire Safety Leads. E-mail: llcdocsubmit@gmail.com.

**Accident Investigation Report Standard Contents**

### Accident investigation reports will vary in length, format and complexity. Each report should be commensurate to the complexity of the incident and focus on organizational learning and the prevention of reoccurrence. The following list is common or standard contents often found in accident investigation reports.

- **Executive Summary** – A brief narrative of the facts involving the accident including dates, locations, times, name of incident, jurisdiction(s), number of individuals involved, etc. Names of injured personnel or personnel involved in the accident are not to be included in this report (reference them by position).

- **Narrative** – A detailed chronological narrative of events leading up to and including the accident, as well as rescue and medical actions taken after the accident. This section will contain who, what, and where.

- **Investigation Process** – A brief narrative of actions taken by the investigation team. This narrative should include investigation team membership, Delegation of Authority information (from who and contents, include a copy as an appendix), investigative actions and timeline (when the team conducted interviews, inspections, site visits, etc.), and if other sources...
were consulted (i.e., professional accident reconstruction experts, equipment manufacturers, etc.). This section should also address if environmental, equipment, material, procedural, and human factors were present, and state how findings/recommendations were developed.

- **Findings/Recommendations**
  - **Findings** – Developed from the factual information. Each finding is a single event or condition. Each finding is an essential step in the accident sequence, but each finding is not necessarily causal or contributing, and each finding may not have an associated recommendation. Findings should only include information necessary to explain the specific event or condition. Findings must be substantiated by the factual data. Findings should not include opinion or speculation.
  - **Discussion** – This provides explanation or information pertinent to a specific finding.
  - **Recommendations** – Recommendations are proposed actions intended to prevent similar accidents. Recommendations should be directly related to findings, should not contain opinion or speculation, and when appropriate, should identify the specific organization responsible for completing the recommended action. Recommendations will be evaluated and may be incorporated into future operational direction through established processes.

- **Conclusions and Observations** – Investigation team’s opinions and inferences, and “lessons learned” may be captured in the section. This section is not required.

- **Reference Materials**
  - **Maps/Photographs/Illustrations** – Graphic information used to document and visually portray facts.
  - **Appendices** – Reference materials (e.g., fire behavior analysis, equipment maintenance reports, agreements).

### Wildland Fire Serious Accident Investigation (SAI) Process

For interagency serious accident investigations, a multi-agency Delegation of Authority to conduct the investigation may be issued. The delegation will ensure that the investigation meets the policy requirements of involved agencies.

- **BLM/FWS** – The Interagency Serious Accident Investigation Guide establishes core direction for BLM, FWS, and interagency serious accident investigations (exceptions for aviation accidents are stated in the guide). It provides serious accident investigation teams a standardized and comprehensive process for conducting serious accident investigations. The guide is available at https://www.nifc.gov/safety/safety_reptsInvest.html.
Serious accident investigation reports will be completed, routed, and disseminated according to processes established in the guide. Reports may contain information supplemental to the requirements of the guide if it augments the BLM/FWS’s ability to learn and to develop further improvements. The guide may be used entirely or in part for accidents that do not meet the serious accident definition.

• **FS** – The Forest Service’s response to serious accidents are the Facilitated Learning Analysis (FLA) which may be used for unintended outcomes of all types, and the Coordinated Response Protocol (CRP) reserved for FS employee fatality events. Both processes are explicitly non-punitive and must have a delegation signed by a line officer so stating. FS Aviation accidents and incidents utilize the FS Aviation Mishap Investigation process. Current versions of the FLA and CRP guides can be found on the Wildland Fire Lessons Learned Center’s website (https://www.wildfirelessons.net/home).

---

Fire Director Responsibilities

The Fire Director(s) or designee(s) of the lead agency, or agency responsible for the land upon which the accident occurred, will:

• Ensure the agency safety manager and Designated Agency Safety and Health Official (DASHO) have been notified;
• Immediately appoint, authorize (through Delegation of Authority), and deploy an accident investigation team;
• Provide resources and procedures adequate to meet the team’s needs;
• Receive the factual and management evaluation reports and take action to accept or reject recommendations;
• Forward investigation findings, recommendations, and corrective action plan to the DASHO (the agency safety office is the “office or record” for reports);
• Convene an accident review board/ board of review (if deemed necessary) to evaluate the adequacy of the factual and management reports and suggest corrective actions;
• Ensure a corrective action plan is developed, incorporating management initiatives established to address accident causal factors; and
• Ensure Serious Accident Investigations remain independent of other investigations.

Agency Administrator Responsibilities

• Develop local preparedness plans to guide emergency response;
• Identify agencies with jurisdictional responsibilities for the accident;
• Provide for and emphasize treatment and care of survivors;
• Ensure the Incident Commander secures the accident site;
• Conduct an in-briefing to the investigation team;
• Facilitate and support the investigation as requested.
Determine need and implement Critical Incident Stress Management (CISM).

Notify home Tribe leadership in the case of a Native American fatality.

Prepare and issue the required 24-Hour Preliminary Report unless formally delegated to another individual.

**Notification**

Agency reporting requirements will be followed. As soon as a serious accident is verified, the following groups or individuals should be notified:

- Agency Administrator;
- Public affairs;
- Agency Law Enforcement;
- Safety personnel;
- County sheriff or local law enforcement as appropriate to jurisdiction;
- National Interagency Coordination Center (NICC) through the local dispatch center and GACC. Provide a [Wildland Fire Fatality and Entrapment Initial Report](https://www.nifc.gov/safety/safety_reptstnvest.html) directly to NICC within 24 hours;
- Agency headquarters; and

OSHA will be notified according to agency policy when an employee is killed on the job or suffers a work-related hospitalization, amputation, or loss of an eye. [https://www.osha.gov/report.html](https://www.osha.gov/report.html)

- A fatality must be reported within 8 hours.
- An in-patient hospitalization, amputation, or eye loss must be reported within 24 hours.

Notification to the respective agency’s fire national safety/risk management lead is required.

**Designating the Investigation Team Lead**

The 1995 Memorandum of Understanding (MOU) between the U.S. Department of the Interior and the U.S. Department of Agriculture states that serious wildland fire-related accidents will be investigated by interagency investigation teams.

The [Memorandum of Agreement (MOA)](https://www.nifc.gov/safety/safety_reptstnvest.html) between Department of Agriculture Forest Service and Department of Interior augments and provides clarification to the 1995 MOU for investigation type and team lead/deputy team lead/interagency representative designation. The MOA also provides an interagency template for joint Delegation of Authority. The MOA is available at [https://www.nifc.gov/safety/safety_reptstnvest.html](https://www.nifc.gov/safety/safety_reptstnvest.html).

Following initial notification of a serious accident, the agency DASHO will designate a Serious Accident Investigation Team Lead(s) and provide that person(s) with a written Delegation of Authority to conduct the investigation and the means to form and deploy an investigation team.
• **BLM/NPS/FWS** – The agency DASHOs have delegated this responsibility to the respective agency fire directors.

• **BLM** – The Fire and Aviation Directorate Safety Program Manager mobilizes SAI teams in coordination with the SAI Team Leader.

Accidents involving more than one agency will require a collaboratively developed Delegation of Authority that is signed by each of the respective agencies.

**Serious Accident Investigation Team (SAIT) Composition**

SAIT members should not be affiliated with the unit that sustained the accident.

- **Team Leader (Core Team Member)**
  A senior agency management official, at the equivalent associate/assistant regional/state/area/division director level. The team leader will direct the investigation and serve as the point of contact to the Designated Agency Safety and Health Official (DASHO).

- **Chief Investigator (Core Team Member)**
  A qualified accident investigation specialist is responsible for the direct management of all investigation activities. The chief investigator reports to the team leader.

- **Accident Investigation Advisor/Safety Manager (Core Team Member)**
  An experienced safety and occupational health specialist or manager who acts as an advisor to the team leader to ensure that the investigation focus remains on safety and health issues. The accident investigation advisor/safety manager also works to ensure strategic management issues are examined. Delegating Officials or their designee may, at their discretion, fill this position with a trained and qualified NWCG Safety Officer, Line (SOFR), Safety Officer, Type 2 (SOF2), or Safety Officer, Type 1 (SOF1).

- **Interagency Representative**
  An interagency representative will be assigned to every fire-related Serious Accident Investigation Team. They will assist as designated by the team leader and will provide outside agency perspective. They will assist as assigned by the Team Leader and will provide a perspective from outside the agency.

- **Technical Specialists**
  Personnel who are qualified and experienced in specialized occupations, activities, skills, and equipment, addressing specific technical issues such as specialized fire equipment, weather, and fire behavior.

- **Public Affairs Officer**
  For investigations with high public visibility and significant news media interest, a public affairs officer (PAO) should be considered a part of the team. The PAO should develop a communications plan for the team, be a designated point of contact for news media, and oversee all aspects of internal and external communications. Ideally, the PAO should be qualified.
as a Type 1 or Type 2 public information officer and be familiar with SAI
team organization and function.

○ **BLM** – *All media related documents (news releases, talking points,
etc.) should be cleared through NIFC Public Affairs prior to external*
release.

Core SAIT members are required to take the Interagency Serious Accident
Investigation Course 1112-05 prior to serious accident investigation assignment.
### This training is also required every 5 years for recurrency. This training is
required every 5 years to maintain currency unless the Core SAIT member has
completed an SAIT assignment within the last 5 years.

- **BLM/FWS/FS** – *This training is required every 5 years to retain currency.*

### SAI 24- and 72-Hour Reports

The final 24-hour report will be approved by the Agency Administrator in
concurrence with the SAI delegating official. The 72-hour report will be
approved by the SAI delegating official. Both reports are sent to the agency fire
safety/risk management lead who will provide a copy to the Wildland Fire
Lessons Learned Center (LLC). E-mail: llcdocsubmit@gmail.com.

- **24-Hour Preliminary Report** – This report contains known basic facts
about the accident. It will be completed and forwarded by the responsible
Agency Administrator to the SAI delegating official. Names of injured
personnel will not be included in this report. Personnel may be referenced
by position.

- **72-Hour Expanded Report** – This report provides additional factual
information, if available. The information may include the number of
victims and severity of injuries. The focus should be on information that
may have immediate impact on future accident prevention. This report will
be completed and forwarded by the SAI team to the SAI delegating official.
Names of injured personnel will not be included in this report. Personnel
may be referenced by position.

### SAI Final Report

Within 45 days of the incident, a final report consisting of a Factual Report (FR)
and a Management Evaluation Report (MER) will be produced by the
investigation team ### to document facts, findings, and recommendations and
forwarded to the Designated Agency Safety and Health Official (DASHO)
through the agency Fire Director(s).

- **Factual Report** – This report contains a brief summary or background of
the event, and facts based only on examination of technical and procedural
issues related to equipment and tactical fire operations. It does not contain
opinions, conclusions, or recommendations. Names of injured personnel are
not to be included in this report (reference them by position). Post-accident
actions should be included in this report (emergency response attribute to
survival of a victim, etc.). Factual Reports will be submitted to Wildland
Fire Lessons Learned Center (LLC) by the respective agency’s fire
safety/risk management leads. E-mail: llcdocsubmit@gmail.com,
• **Management Evaluation Report (MER)** – The MER is intended for internal use only and explores management policies, practices, procedures, and personal performance related to the accident. The MER categorizes findings identified in the factual report and provides recommendations to prevent or reduce the risk of similar accidents.

**Accident Review Board/Board of Review**

An Accident Review Board/Board of Review is used by some agencies to evaluate recommendations, and develop a corrective action plan. Refer to the respective agency’s Safety and Health policy.

**Fire Cause Determination and Trespass Investigation**

**Introduction**

Agency policy requires determination of cause, origin, and responsibility for all wildfires. Accurate fire cause determination is a critical first step for a successful fire investigation and for targeting fire prevention efforts. Proper investigative procedures, which occur concurrent with initial attack, more accurately pinpoint fire causes and can preserve valuable evidence that would otherwise be destroyed by suppression activities. Fire trespass refers to the occurrence of unauthorized fire on agency-protected lands where the source of ignition is tied to some type of human activity.

### BIA

### Initiation of fire cause determination must be started with notification of an incident. Initial attack dispatchers are responsible for capturing all pertinent information when the fire is reported and throughout the incident. The initial attack Incident Commander and the initial attack forces are responsible for protecting the origin area and initiating fire cause determination and documenting observations starting with their travel to the fire. If probable cause indicates human involvement, an individual qualified in fire cause determination (INVF or cooperator equivalent) should be dispatched to the fire.

**Policy**

The agency must pursue cost recovery, or document why cost recovery is not required, for all human-caused fires on public lands. The agency will also pursue cost recovery for other lands under fire protection agreement where the agency is not reimbursed for suppression actions, if so stipulated in the agreement.

For all human-caused fires where negligence can be determined, trespass actions are to be taken to recover cost of suppression activities, land rehabilitation, and
damages to the resource and improvements. Only fires started by natural causes will not be considered for trespass and related cost recovery.

The determination whether to proceed with trespass action must be made on “incident facts,” not on “cost or ability to pay.” Trespass collection is both a cost recovery and a deterrent to prevent future damage to public land. It is prudent to pursue collection of costs, no matter how small. This determination must be documented and filed in the unit office’s official fire report file.

### The Agency Administrator has the responsibility to bill for the total cost of the fire and authority to accept only full payment. On the recommendation of the State/Regional Director, the Solicitor/Office of General Counsel may compromise claims of the United States, up to the monetary limits ($100,000) established by law 31 U.S.C. 3711[a], 4 CFR 103–104, and 205 DM 7.1 and 7.2. The Solicitor/Office of General Counsel will refer suspension or termination of the amount, in excess of $100,000, exclusive of interest, penalties, or administrative charges, to the Department of Justice.

Unless specified otherwise in an approved protection agreement, the agency that has the land management jurisdiction/administration role is accountable for determining the cause of ignition, responsible party, and for obtaining all billable costs, performing the billing, collection, and distribution of the collected funds. The agency with the fire protection responsibility role must provide the initial determination of cause to the agency with the land management jurisdiction/administration role. The agency providing fire protection shall provide a detailed report of suppression costs that will allow the jurisdictional agency to proceed with trespass procedures in a timely manner.

Each agency’s role in fire trespass billing and collection must be specifically defined in ### the relevant Cooperative Fire Protection Agreement ### between federal and state cooperators. Federal agencies will follow established procedures for each agency and utilize the IPAC system to transfer funds. The billing and collection process for federal agencies is:

• For example, a federal agency fire occurs on another federal agency’s land and is determined to be a trespass fire. BLM provides assistance, and supplies costs of that assistance to the federal agency with jurisdictional responsibility for trespass billing. The responsible federal agency bills and collects trespass, and BLM then bills the federal agency and is reimbursed for its share of the collection according to BLM Trespass guidance.

• For example, where BLM administered land is protected by a state agency, the billing and collection process is:
The state bills BLM for their suppression costs. The BLM will pursue trespass action for all costs, suppression, rehabilitation, and damages, and deposits the collection per BLM’s trespass guidance.

Initiation of fire cause determination must be started with notification of an incident. Initial attack dispatchers are responsible for capturing all pertinent information when the fire is reported and throughout the incident. The initial attack Incident Commander and the initial attack forces are responsible for initiating fire cause determination and documenting observations starting with their travel to the fire. If probable cause indicates human involvement, an individual qualified in fire cause determination (INVF or cooperator equivalent) should be dispatched to the fire.

Chapter 19

Dispatch and Coordination System

Introduction

The primary mission of the national dispatch/coordination system is the timely, cost-effective, and efficient coordination, mobilization, and demobilization of wildland fire resources. This mission is accomplished at the direction of Agency Administrators and designated fire managers at the local, geographic, and national level and delegated to the Center Manager. Agency Administrators and fire managers are responsible for providing direction to their respective dispatch/coordination centers. The dispatch/coordination system implements the movement of resources in response to the direction as delegated.

Agency Administrators and fire managers will:

- Provide oversight for the development and implementation of dispatch/coordination center plans and operating procedures (e.g., initial response plans, dispatch operating guides/manuals, and mobilization guides) that enable the effective implementation of the fire management plan.
- Through prior planning, provide dispatch with an initial response plan to allocate resources to new incidents under the leadership of the Center Manager or delegated acting.
- Establish priorities for prepositioning and deployment of fire suppression resources based on evaluation of current/predicted fire activity and firefighting resource status and availability, and communicate these priorities to the dispatch/coordination managers through established command channels for implementation.
- Serve as authorized representatives on local, geographic, and national coordinating groups and MAC groups.

Dispatch/Coordination Center Managers will:

- Ensure that dispatch/coordination center decisions and actions are consistent with priorities, established plans, and operating procedures as determined by Agency Administrators and fire managers.
- Implement pre-planned response for allocation of resources to new incidents, pursuant to their delegation from Agency Administrators and designated fire managers.
- Develop and implement dispatch/coordination center plans and operating procedures (e.g., initial response plans, dispatch operating guides/manuals, and mobilization guides) that enable the effective implementation of the fire management plan.

National Dispatch/Coordination System

The wildland fire dispatch and coordination system in the United States has three levels (tiers):
Chapter 19 Dispatch and Coordination System

National – National Interagency Coordination Center
Geographic – Geographic Area Coordination Centers
Local – Local Dispatch Centers

Logistical dispatch operations occur at all three levels, while initial attack dispatch operations occur primarily at the local level. Any geographic area or local dispatch center using a dispatch system outside the three-tier system must justify why a non-standard system is being used and request written authorization from the BLM, FWS, and/or NPS National Office or USFS Regional Office.

National Interagency Coordination Center (NICC)
The NICC is located at NIFC, in Boise, Idaho. The principal mission of the NICC is the cost-effective and timely coordination of land management agency emergency response for wildland fire at the national level. This is accomplished through planning, situation monitoring, and expediting resource orders between the BIA Areas, BLM States, National Association of State Foresters, FWS Regions, FS Regions, NPS Regions, National Weather Service (NWS) Regions, Federal Emergency Management Agency (FEMA) Regions through the United States Fire Administration (USFA), and other cooperating agencies.

The NICC coordinates any requests for support from foreign countries, either through Departments of Agriculture and Interior agreements (Canada and Mexico) or arrangements (Australia and New Zealand), or from the Forest Service International Programs’ Disaster Assistance Support Program (DASP) through the U.S. Agency for International Development’s Office of Foreign Disaster Assistance.

The NICC supports non-fire emergencies when tasked by an appropriate agency, such as FEMA, through the National Response Framework. The NICC collects and consolidates information from the GACCs and disseminates the National Incident Management Situation Report through the NICC website at https://www.nifc.gov/nicc/sitreprt.pdf.

Geographic Area Coordination Centers (GACCs)
There are 10 GACCs, each of which serve a specific geographic portion of the United States. Each GACC interacts with the local dispatch centers, as well as with the NICC and neighboring GACCs. Refer to the National Interagency Mobilization Guide for a complete directory of GACC locations, addresses, and personnel.

The principal mission of each GACC is to provide the cost-effective and timely coordination of emergency response for all incidents within the specified geographic area. GACCs are also responsible for:
- Determining needs;
- Coordinating priorities;
• Facilitating mobilization of resources within their Geographic Area (GA) and in support of other GA’s; and
• Supplying intelligence associated with incidents and resource availability within their GA to the NICC and cooperating agencies.

Local Dispatch Centers
Local dispatch centers are located throughout the country as dictated by the needs of fire management agencies. Local dispatch centers dispatch multi-agency wildland firefighting resources within a pre-established and identified dispatch zone boundary. The principal mission of a local dispatch center is to provide safe, timely, and cost-effective coordination of emergency response for all incidents within its specified geographic area. This entails the coordination of initial attack responses and the ordering of additional resources when fires require extended attack.

Local dispatch centers are also responsible for supplying intelligence and information relating to fires and resource status to their GACC and to their agency managers and cooperators. Local dispatch centers may work for, or with, numerous agencies, but should only report to one GACC.

Some local dispatch centers are also tasked with law enforcement and agency administrative workloads for non-wildfire operations. If this is the case, a commensurate amount of funding and training should be provided by the benefiting activity to accompany the increased workload. If non-wildfire workload is generated by another agency operating in an interagency dispatch center, the agency generating the additional workload should offset this increased workload with additional funding or personnel.

Mobilization Guides
The NICC and each GACC annually publish a Mobilization Guide. The Mobilization Guides identify standard procedures which guide the operations of multi-agency logistical support activity throughout the coordination system. These guides are intended to facilitate interagency dispatch coordination, ensuring timely and cost-effective incident support services are provided. Local and Geographic Area Mobilization Guides supplement the National Interagency Mobilization Guide.

The National Interagency Mobilization Guide (NFES 2092) and links to Geographic Area Mobilization Guides are available at https://www.nifc.gov/nicc/.

Local Mobilization Guide/Dispatch Operating Plan
Local dispatch centers will have a local mobilization guide or dispatch operating plan to supplement the GACC and National Mobilization Guides. The mobilization guide or operating plan will include or provide reference to the minimum elements and procedures to guide the operation of a local dispatch center. See Appendix P for minimum required elements and procedures for
inclusion in a local mobilization guide/dispatch operating plan or at

### Local and Geographic Area Drawdown

Drawdown is the predetermined number and type of suppression resources that are required to maintain viable initial attack (IA) capability at either the local or geographic area. Drawdown resources are considered unavailable outside the local or geographic area for which they have been identified.

Drawdown is intended to:

- Ensure adequate fire suppression capability for local and/or geographic area managers; and
- Enable sound planning and preparedness at all management levels.

Although drawdown resources are considered unavailable outside the local or geographic area for which they have been identified, they may still be reallocated by the Geographic Area or National MAC to meet higher priority obligations.

### Establishing Drawdown Levels

Local drawdown is established by the local unit and/or the local MAC group and implemented by the local dispatch office. The local dispatch office will notify the Geographic Area Coordination Center (GACC) of local drawdown decisions and actions.

Geographic area drawdown is established by the GMAC and implemented by the GACC. The GACC will notify the local dispatch offices and the National Interagency Coordination Center (NICC) of geographic area drawdown decision and actions.

### National Ready Reserve (NRR)

NRR is a means by which the NMAC identifies and readies specific categories, types, and quantities of fire suppression resources in order to maintain overall national readiness during periods of actual or predicted national suppression resource scarcity.

NRR implementation responsibilities are as follows:

- NMAC establishes national ready reserve requirements by resource category, type, and quantity.
- NICC implements NMAC intent by directing individual GACCs to place specific categories, types, and quantities of resources on national ready reserve.
- GACCs direct local dispatch centers and/or assigned IMTs to specifically identify resources to be placed on national ready reserve.
- NICC mobilizes national ready reserve assets through normal coordination system channels as necessary.
National ready reserve resources must meet the following requirements:

- May be currently assigned to ongoing incidents;
- Must be able to demobe and be en route to new assignment in less than 2 hours;
- Resources must have a minimum of 7 days left in 14-day rotation (extensions will not be factored in this calculation);
- May be assigned to incidents after being designated ready reserve, in coordination with NICC; and
- Designated ready reserve resources may be adjusted on a daily basis.

NMAC will adjust ready reserve requirements as needed. Furthermore, in order to maintain national surge capability, the NMAC may retain available resources within a geographic area, over and above the established geographic area drawdown level.

Dispatch/Coordination Center Administration

Memorandum of Understanding (MOU)

Each dispatch/coordination center will have a Memorandum of Understanding (MOU) signed by all cooperators. This MOU will be reviewed and updated annually. Dispatch/coordination center MOUs and their associated ### Annual Operating Plans (### AOPs) will be current and will define:

- The roles and responsibilities of each interagency partner’s fiscal and infrastructure support responsibilities;
- Administrative oversight/support groups involved with the dispatch/coordination center;
- Clear fiscal reimbursement procedures and interagency funding procedures;
- The dispatch/coordination center’s organizational charts;
- Communication protocols for local and geographic area cooperating Agencies, including briefings, planned meetings, and conference calls;
- Procedures for Incident Management Team mobilization and close-out; and
- Supporting documentation, such as any local initial attack or fire and aviation agreements for units serviced by the center.

Funding for facilities, equipment, and staffing needs shall be identified in each participating agency’s planning and budget process, and included in the MOU/### AOP.

Service and Supply Plans

All local dispatch centers shall maintain a Service and Supply Plan that contains current copies of procurement documents related to locally available resources. Service and Supply Plans must be current, complete, organized, and accessible to initial attack and expanded dispatchers.

The Service and Supply Plan will contain current copies of competitive Incident Blanket Purchase Agreements (I-BPAs), as well as source lists for incident-only
agreements. Resources and their respective contracts/agreements will be entered into ROSS if applicable, and naming conventions will meet national standards.

For additional required components of a Service and Supply Plan, refer to Appendix P at https://www.nifc.gov/policies/pol_ref_redbook.html.

**Continuity of Operations Plan (COOP)**

All centers will maintain a current Continuity of Operations Plan (COOP) which includes a pre-identified alternate location with adequate supplies, notification procedures for activation, a back-up computer system, and contingency plans for loss of telecommunications equipment and/or loss of access to network connectivity. Additionally, all centers which are required to maintain communications with field going resources, including aircraft, will maintain an identified back-up power source and redundancies in communication systems for a possible loss of radios and/or telecommunications equipment.

**Dispatch/Coordination Center Manager Delegation of Authority**

All Dispatch/Coordination Center Managers shall have a signed Delegation of Authority providing an adequate level of operational authority from all participating agencies. The Delegation of Authority will include appropriate supervisory authority, and a process for completion of employee performance evaluations.

The Dispatch/Coordination Center Manager may, where appropriate, complete a Delegation of Authority for staff that identifies roles and responsibilities for Acting Center Manager, Coordinator-on-Duty, Floor Supervisor, and/or Internal Duty Officer.

**National Interagency Coordination Center (NICC) Functional Responsibilities**

The NICC has established the Coordinator-On-Duty (NICC COD) position. The NICC COD is responsible for managing the daily operation of the NICC and for resource allocation decisions in alignment with NMAC direction.

The National Interagency Coordination Center (NICC) is responsible for the following:

- **Positioning and Movement of Resources**
  
  NICC, in conjunction with the GACCs, is responsible for ensuring a coordinated response to wildland fire incidents and/or all-hazard incidents under the National Response Framework or other appropriate authorities.
  
  NICC positions resources (personnel, aircraft, supplies, and equipment) to meet existing and anticipated incident, preparedness, severity, wildland, and prescribed fire needs regardless of geographic location or agency affiliation.
  
  NICC coordinates movement of resources across Geographic Area boundaries. NICC allocates resources according to National Multi-Agency
Coordinating Group (NMAC) direction when competition for wildland fire resources occurs among Geographic Areas.

- **Management of National Aviation Resources**
  As directed or delegated by NMAC, NICC allocates national resource aviation assets to the Geographic Areas based upon national priorities. These national resources include:
  - Federal airtankers
  - Single Engine Airtankers (SEATs)
  - Large transport aircraft
  - Modular Airborne Fire Fighting System (MAFFS) Airtankers
  - Type 1 and 2 FS Exclusive Use/Call-When-Needed contracted helicopters
  - Airborne Thermal Infrared (IR) Fire Mapping aircraft
  - Leadplanes and Aerial Supervision Modules
  - Smokejumpers
  - Smokejumper aircraft
  - Water Scoopers
  - Federally-contracted exclusive use and CWN UAS
  NICC has established authorities and procedures for dispatching aviation resources. These authorities and procedures include:
  - Aircraft ordering protocols for fire, logistical and administrative flights;
  - Tracking of all aircraft ordered through NICC that cross geographic area boundaries;
  - Mechanisms for disseminating availability and commitment status throughout the dispatch/coordination system; and
  - Procedures for mobilization and use of large transport aircraft (NICC is the sole source for large transport aircraft).
  - GACCs hosting national Type 1 and 2 helicopters will coordinate with NICC prior to releasing flight crews for the day when those resources are not being used within the host area and could be utilized elsewhere for emerging or ongoing fire activity.

- **Management of National Support Resources**
  NICC mobilizes national support resources such as National Interagency Radio Support Cache radio systems and kits, Incident Remote Automatic Weather Stations, Project Remote Automatic Weather Stations, National Contract Mobile Food Services, and National Contract Mobile Shower Facilities. Refer to the *National Interagency Mobilization Guide* for more information.

- **Allocation of Other National Resources**
  As directed or delegated by the NMAC, NICC mobilizes national program resources such as National Interagency Buying Teams, Administrative Payment Teams, Burned Area Emergency Response Teams, and National Fire Prevention and Education Teams to the Geographic Areas based upon national priorities. Refer to the *National Interagency Mobilization Guide* for more information.
Predictive Services ### and Intelligence

Predictive Services is a decision support unit for federal, state and local land agencies for operational management of and strategic planning for wildland firefighting resources. Predictive Services accomplishes this through analysis of weather and climate, fuels, and fire activity and behavior. The products and services provide support for the proactive management of wildland fire with an eye toward safety, cost containment, efficiency and ecosystem health. Additionally, Predictive Services will advance the state of science through collaborations with cooperating agencies, including academic, research and private sector partners.

The National Predictive Services staff works under the direction of the National Interagency Coordination Center (NICC) Manager, with guidance from the National Multi-Agency Coordinating Group (NMAC). Geographic Area Coordination Center (GACC) Predictive Services staff work under the direction of the GACC Manager, with guidance from the Geographic Area Coordinating Groups. National and GACC missions share importance and as such, National and GACC Predictive Services work in unison to create and maintain products and services which provide value to users at all levels.

Predictive Services is comprised of Meteorologists and Fuels and Fire Behavior Analysts at NICC and the GACCs. GACC Managers and Geographic Area Coordinating Groups decide the need for and allocation of positions within each GACC with input from National Predictive Service staff, the NICC Manager and NMAC.

Intelligence gathering is a fundamental component of the national coordination system for federal, state and local land agencies. Intelligence coordination is accomplished through compiling reports from all levels of the firefighting organization as well as communicating with individual GACCs and local jurisdictions concerning their ongoing, historical and expected fire occurrence. The products and services provide support for the proactive management of wildland fire with an eye toward safety, cost containment, efficiency and ecosystem health.

The National Intelligence Coordination staff works under the direction of the National Interagency Coordination Center (NICC) Center Manager, with guidance from the National Multi-Agency Coordinating Group (NMAC). Geographic Area Coordination Center (GACC) Intelligence Coordinator and staff work under the direction of the GACC Center Manager or Predictive Services Manager, with guidance from the Geographic Area Coordinating Groups. National and GACC missions share importance and as such, National and GACC Predictive Services work in unison to create and maintain products and services which provide value to users at all levels.
The Intelligence sections are comprised of Intelligence Coordinators and Intelligence Officers at NICC and the GACCs. GACC Managers and Geographic Area Coordinating Groups decide the need for and allocation of positions within each GACC with input from National Intelligence Coordination staff, the NICC Manager and NMAC. The National Predictive Services Program mission is to integrate climate, weather, fuels, situation and incident resource status information to enhance the ability of managers to make sound decisions for both short- and long-range strategic planning. Working as cohesive units situated at each of the Geographic Area and National Interagency Coordination Centers, Predictive Services will blend the functions of intelligence, fire management analysis and meteorology for delivering decision support products and services in support of Geographic Area and National decision-making.

The National Predictive Services Oversight Group (PSOG) provides management oversight and direction to the National Predictive Services Program. The group coordinates, directs and oversees the development and implementation of national program products and services, ensures the integrity and cohesiveness of program operations, arbitrates differences, and provides a venue for dialogue and deliberation in support of a sustainable and effective program.

The National Predictive Services staff works under the direction of the National Interagency Coordination Center (NICC) Manager, with guidance from the National Multi-Agency Coordinating Group (NMAC). Geographic Area Coordination Center (GACC) Predictive Services staff work under the direction of the GACC Manager, with guidance from the Geographic Area Coordinating Groups. National and GACC missions share importance and as such National and GACC Predictive Services work in unison to create and maintain products and services which provide value to users at all levels.

Predictive Services is comprised of Meteorologists, Fuels and Fire Behavior Analysts and Intelligence Coordinators and Officers at NICC and the GACCs. GACC Managers and Geographic Area Coordinating Groups determine the need and allocation of positions within each GACC with input from National Predictive Service staff, the NICC Manager and NMAC.

- **International and Department of Defense Assistance**

  NICC serves as the focal point for international assistance requested from NMAC either under existing agreements or by the US Department of State. NICC also serves as the focal point for any requests for assistance from the Department of Defense.

  For more information, see agreements at https://www.nifc.gov/nicc/logistics/references.htm.

**Geographic Area Coordination Center (GACC) Functional Responsibilities**

Each GACC Manager will be responsible for managing the daily operation of the GACC and for resource allocations within their GA. Resource allocation will be in alignment with their GA MAC and NMAC. The GACC Manager may
identify an additional point-of-contact (POC) in the form of coordinator-on-duty (COD), Duty Officer and/or Duty Chief.

Geographic Area Coordination Centers (GACCs) are responsible for the following:

- **Positioning and Movement of Resources**
  - GACCs, in conjunction with NICC and local dispatch centers, are responsible for ensuring a coordinated response to wildland fire incidents and/or all-hazard incidents under the National Response Framework or other appropriate authorities. GACCs mobilize and position resources (personnel, aircraft, supplies, and equipment) internally among local dispatch centers to meet existing and anticipated incident, preparedness, severity, wildland, and prescribed fire needs, regardless of geographic location or agency affiliation. GACCs coordinate movement of resources within Geographic Area boundaries and allocate resources according to Geographic Area Multi-Agency Coordinating Group (GMAC) direction when competition for wildland fire resources occurs within the Geographic Area. GACCs will ensure adequate fire suppression capability for local and/or Geographic Area managers, and enable sound planning and preparedness at all management levels.

Geographic Areas will establish priorities for their incidents and wildland fires and report them to NICC. GACCs will notify NICC and adjoining GACCs of the commitment of National Resources within their Area, and will notify the local dispatch offices and the NICC of Geographic Area drawdown decision and actions.

Activities associated with the National Response Framework will be accomplished utilizing established dispatch coordination procedures. The affected GACC will coordinate ordering points with Regional Response Coordination Centers (RRCC) and Joint Field Offices (JFO).

- **Management of Aviation Resources**
  - GACCs have established authorities and procedures for dispatching aviation resources. These procedures include:
    - Aircraft ordering protocols for fire, logistical and administrative flights;
    - Procedures for ordering agency-approved IR Mapping Aircraft and unmanned aircraft system (UAS);
    - Procedures for tracking of all aircraft within Geographic Area boundaries;
    - Mechanisms for disseminating availability and commitment status throughout the dispatch/coordination system;
    - Ordering and operational procedures between the GACC, dispatch center(s) and airtanker base(s);
    - Procedures for flight following (including protocols for use of Automated Flight Following (AFF) and initial call on the National Flight Following Frequency);
• **Predictive Services**

  # The GACC and/or Predictive Service Managers will provide daily supervision of their respective Predictive Services programs, including developing GACC-specific operating plans. These plans will encompass the daily activities of the GACC Predictive Services program, including supervision, the flow of information within the GACC and Geographic Area, and the products produced for Geographic Area purposes. GACC and/or Predictive Service Managers will have ultimate responsibility for ensuring GACC Predictive Services staff have the appropriate allocation of time and resources to produce required national products including but not limited to the National 7-day Significant Fire Potential Outlook; the National Significant Wildland Fire Potential Outlook; and Fuels and Fire Behavior Advisories as needed.

• **Intelligence**

  The GACC and/or Predictive Service Managers will provide daily supervision of their respective Intelligence Coordination programs, including developing GACC-specific operating plans. These plans will encompass the daily activities of the GACC Intelligence Coordination program, including supervision, the flow of information within the GACC and Geographic Area, and the products produced for Geographic Area purposes including Multi-Agency Coordination Group management. The GACC Center Managers will have ultimate responsibility for ensuring GACC Intelligence Coordination staff have the appropriate allocation of time and resources to produce required national products.
Local Dispatch Center Functional Responsibilities

Local Dispatch centers are responsible for initial attack dispatching, coordination of communications, intelligence gathering and dissemination, and logistical support for local incidents and field operations.

**Initial Attack Dispatching**

Local dispatch centers are the focal point for the report of, and initial response to wildland fires, and under appropriate authorities, other emergency incidents at the local level. Deployment of response resources is made in accordance with local processes and procedures as outlined in the dispatch center’s mobilization guide.

Each dispatch office with the responsibility for initial response to wildland fires shall have a pre-planned response plan that allocates resources to new wildland fires in accordance with fire management direction, initial attack agreements, and established ordering procedures. The pre-planned response plan will be reviewed and updated annually prior to fire season.

Additionally, each center will have a method to document actions taken and resources sent to wildland fires. Centers may use either a manual or computer aided dispatch system.

Each dispatch center shall have maps posted that depict initial attack response areas, land ownership, jurisdictional and protection boundaries, hazards, and resource concerns. Each center will also ensure that Computer Aided Dispatch (CAD) and Geographic Information System (GIS) products are current, functioning, and utilized.

Dispatch centers will have protocols in place for frequency management, priority use of frequencies, and procedures for obtaining additional frequencies.

Local Dispatch centers will have protocols in place for timely request and dissemination of Fire Weather Forecasts, Spot Weather Forecasts, Fire Weather Watches, and Red Flag Warnings to firefighters, Incident Commanders, and field-going personnel.

The National Multi-Agency Coordinating Group (NMAC) has established incident name protocols. Guidance can be found at https://www.nifc.gov/nicc/administrative/nmac/index.html.

All required reference material will be current and accessible, and expired or out-of-date material will be removed.

**Intelligence**

The intelligence function is responsible for gathering and disseminating incident, resource, weather and predictive services information. Each dispatch center will ensure that locations and conditions of the fire weather stations are known and a current weather station catalog is available.

Weather data will be archived daily in WIMS and seasonal inputs will be
maintained, including vegetative state, fuel moisture values, daily state of
the weather observations, and updating breakpoints.

○ **FS** – Dispatch centers are required to have a person trained in the
  National Fire Danger Rating System (NFDRS) assigned to data quality
  assurance responsibilities.

Dispatch centers will ensure that coordination/communication with the local
NWS Forecast Office occurs annually prior to fire season.

Local dispatch centers will have a process in place for submission of the
daily situation report and ICS-209s.

Dispatch centers with websites will ensure current intelligence and weather
information is posted.

- **Expanded Dispatch and Incident Business Management**

Expanded dispatch is a functional branch of the Incident Support
Organization (ISO) that supports incidents and expands as local fire
conditions and activity dictates. Expanded dispatch is established when a
high volume of activity indicates that increased dispatch and coordination
capability is required.

Each dispatch center will have an Expanded Dispatch Operating Plan which
provides specific details about when, where, and how to implement an
expanded dispatch. The plan will identify logistical support facilities
available for expanded dispatch use. These facilities will be pre-identified,
procured, and available for immediate setup, along with necessary
equipment.

The expanded dispatch workspace will be separate from, but accessible to,
the initial attack organization. The area should have adequate office space,
including suitable lighting, heating/cooling systems, and security.

Expanded dispatchers will have access to communications equipment
including telephones, fax machines, copiers, and computer hardware with
adequate data storage space.

Qualified personnel should be on site in order to adequately staff required
expanded dispatch functions. Expanded dispatch supervisors are responsible
for establishing a staffing and operating schedule for expanded dispatch,
including operational period changes, briefings, and strategy meetings.

- **Aviation**

Each dispatch center will have documented procedures established for
dispatching of aviation resources. These procedures will include:

○ Aircraft ordering protocols for fire, logistical and administrative flights;

○ Procedures for ordering agency-approved IR Mapping Aircraft and
  unmanned aircraft system (UAS);

○ Procedures for disseminating availability and commitment status
  throughout the dispatch/coordination system;

○ Procedures for coordination with airtanker bases;
CHAPTER 19 DISPATCH AND COORDINATION SYSTEM

○ Procedures for airtanker, smokejumper and rappeller use and restrictions;
○ Procedures for flight following (including protocols for use of Automated Flight Following (AFF) and initial call on the National Flight Following Frequency);
○ Procedures for ordering and establishing TFRs;
○ Procedures for airspace de-confliction for Military Air Space (MTR, SUA, MOA) and Restricted Areas, and current Aviation flight hazard maps or military operating area sectionals;
○ Procedures for requesting FAA Temporary Towers;
○ Procedures for reporting through the SAFECOM system; and
○ Procedures for reporting drone intrusions.

Accident Notification

When an accident occurs, agency notification requirements will be followed. As soon as the accident is verified, the following should be notified:

• Local dispatch center;
• Unit Fire Management Officer; and
• Agency Administrator(s).

Additional notifications should occur in the dispatch/coordination system, from the local dispatch center to the NICC through the GACC.

Incident Emergency Management Planning

To achieve successful medical response, Agency Administrators will ensure that their units have completed the following items prior to each field season:

• A Medical Emergency Response Plan that identifies medical evacuation options, local/county/state/federal resource capabilities, capacities, ordering procedures, cooperative agreements, role of dispatch centers, and key contacts or liaisons;
• Standardized incident and communication center protocols identified in the Medical Incident Report section of the IRPG.

For incidents that require the preparation of an IAP, Form ICS-206-WF will be used. This form is available at https://www.nwcg.gov/publications/ics-forms/ics_206_wf.pdf.

Dispatch/Coordination Center Reference Material

All coordination/dispatch centers will have reference materials available to all dispatchers. See Appendix P for a list of minimum required reference materials at https://www.nifc.gov/policies/pol_ref_redbook.html.
Training

Dispatch/Coordination center staff will be trained in, and follow established procedures for, the use of applications utilized in center operations.

Personnel will be cross trained in each function (i.e., aircraft, crews, overhead, equipment, intelligence) in order to provide staffing coverage. Dispatch personnel will be trained in and follow center procedures for the following (as applicable):

- Resource Ordering and Status System (ROSS);
- Computer Aided Dispatch (CAD);
- Fire Code;
- Automated Flight Following (AFF);
- Unit Identifiers;
- SIT Report/209; and
- Other applications (e.g., WFDSS, ISuite).

All dispatch center employees will have a documentation file for current season training, past season fire training, certifications and experience, fire experience, performance evaluations, and have task books initiated appropriate to their training needs. All supervisors will be familiar with safety and accident reporting processes (i.e., Safety Management Information System (SMIS), SAFENET, SAFECOM).

All employees will have current red cards produced by the Incident Qualification and Certification System (IQCS) as per Chapter 13.

Facilities and Equipment

All dispatch/coordination centers will have a telephone system with an adequate number of lines for normal business volume, and the capability to expand as conditions dictate. Centers will have teleconference capabilities commensurate with the anticipated volume of business.

Copying, facsimile, computer, and GIS systems shall meet operational needs (quantity and capability) and comply with agency standards. Software will be compatible with Information Resource Management and agency requirements for security.

All facilities shall have an evacuation plan, security plan, and safety practices in place to safeguard the health and welfare of employees.
Adequate facilities will be available to host an expanded dispatch or MAC group and shall include telephones, computer access, copiers, and basic office supplies. Rooms for MAC Group use will have adequate IT equipment and support. All centers will have adequate workspace with room for reference materials and other necessary items to perform assigned duties. Individual workspace should be provided away from the initial attack floor for each permanent employee, and a break room area should be provided for employees. Employees will have access to a locked area to store data that may contain personally identifiable information (PII) or personal items.

**Radio Systems**

Radio systems will have an adequate number of frequencies to provide for separation of incidents and use by all interagency partners. Base station and repeater transmissions shall be recorded and maintained in accordance with agency records management policies. Radio systems may have alert tones available for use as determined by local center policies.
Appendix A
Sample Questions for Fire Site Visits
by Agency Administrators

Management Direction

Who is the incident commander? If the fire is being managed under Unified Command, are all commanders present? Is the incident operating smoothly?

What is the incident organization?

What is the current situation? What has been damaged or is at risk?

Have you received adequate direction for the management of the incident?

Is a Wildfire Decision Support System required/still valid?

What are the incident management objectives? Constraints? Probability of success?

Are the tactics in the Incident Action Plan realistic and achievable with current resources?

Is a resource advisor needed?

What are your estimates of suppression costs?

What are the incident commander’s concerns?

What are the local, social, economic, and political issues?

Are there rehabilitation needs?

What can I, as the agency administrator, do to help?

Safety

What are your safety concerns?

Are these concerns resolved? If not, what needs to be done?

What is the general safety attitude and emphasis?

Have you assessed the potential hazardous situations and determined if the fire can be fought safely?

Have you applied the Fire Orders, Watch Out Situations, Lookout, Communication, Escape Routes, Safety Zones (LCES) process in selecting safe and effective strategies and tactics?

Have you effectively briefed firefighters on hazards, safety zones, escape routes, and current and expected weather and fire behavior?

Is the safety officer position filled? If not, how is this function being addressed?

Are you monitoring work schedules to ensure adequate rest? Are you meeting the standard work/rest guidelines?

Have you provided for adequate rest, food, water, and health services for all personnel?

Are all the fire personnel qualified for the positions they hold, and are they physically able to perform?

Have you had any injuries or accidents?
APPENDIX A 
SAMPLE QUESTIONS FOR SITE VISITS BY AGENCY ADMINISTRATORS

Fire Suppression Operations

____ What is the fire weather forecast (present and extended)?
____ What is the fire behavior potential?
____ Are fire personnel briefed on incident objectives, strategies, tactics, organization, communications, hazards, and safety principles?
____ Are the strategy and tactics based on current and forecasted weather?
____ Are the strategy and tactics safe, effective, and consistent with management’s objectives and accepted fire policies and procedures?
____ Do you have effective communication on the incident and with dispatch?
____ Are you monitoring weather and fire behavior to make needed adjustments to strategy and tactics?
____ Are you using tactical aircraft? Do you have an assigned air tactical group supervisor?
____ Is aircraft use safe, effective, and efficient? Do you have a TFR?
____ If the fire escapes initial attack, what will your role be in developing the Wildfire Decision Support System?

Administration

____ Do you have any administrative concerns?
____ What arrangements have you made to complete time reports, accident forms, fire report, etc.?
____ Did all orders and procurement go through dispatch?
____ Do you have any outstanding obligations?
____ Are all rental agreements and use records properly completed?
____ How did the fire start? If human-caused, has an investigation been initiated to determine the cause and develop a trespass case?
____ Do you know of any current or potential claims?

Dispatch Office

____ Is the incident receiving fire weather and fire behavior information?
____ Is the incident getting the resources ordered in a timely manner?
____ Is dispatch adequately staffed?
____ What are the local, area, and National Preparedness Levels? How do they affect this fire?
____ Are the elements identified at the various Preparedness Levels being considered?
____ What are the current local, area and national fire situations?
____ What is the priority of existing fires and how are the priorities being determined?
Appendix B
Manager’s Supplement for Post Incident Review

Incident Commander ______________________________________
Incident Name and Number ______________________________________
Start Date and Duration of Incident ________________________________
Date of Incident Debriefing ______________________________________
List of Debriefing Attendees:

Brief synopsis of fire behavior and narrative of the incident:

Fire Size-up:
- Gave an accurate sizeup of the fire to dispatch upon arrival?
- Managed fire suppression resources in accordance with the management objectives for the area and availability of resources?
- Did the unit support organization provide timely response and feedback to your needs? (Appendix A)
- Were there any radio communication issues?

Provide for the Safety and Welfare of Assigned Personnel:
- Gave operation briefing prior to firefighters being assigned to incident operations.
- How were incoming resources debriefed; via radio, personal contact?
- Were agency work/rest guidelines followed? Was adequate food and water provided to firefighters?

Fire Suppression Operations:
- Explain how the strategies and tactics used met management objectives, without compromising adherence to the Fire Orders, Watch Out Situations, and LCES?
- How were weather conditions monitored: daily weather briefings, spot weather forecasts or other?
- Were there adjustments needed to strategy and tactics?
- What were the potentially hazardous situations, and their mitigations?
- How were projected changes in the weather, tactics, hazards and fire behavior communicated to fire personnel?
- Were communications effective with dispatch and supervisor?
- Were all interested parties kept informed of progress, problems, and needs? Was aviation support used? If so, was it effective?
- Were there any injuries, close calls, or safety issues that should be discussed? Were these documented?

Administrative Responsibilities:
- Submitted complete documentation to supervisor for time, accidents, incident status, unit logs, evaluations, and other required or pertinent reports?
- Provided timely and effective notification of the fire status and unusual events or occurrences to dispatch and management.
- As requested, provided effective input into the Wildfire Decision Support System.
- If necessary, provided team transition briefing as assigned.
- Form ICS 201 was completed in accordance with local policy.

Release Date: January 2020
Appendix C
Sample Delegation for Unit Fire Management Officers

Management Officer for the ___________________________ (Unit) is delegated authority to act on my behalf for the following duties and actions:

1. Represent the ______________________ (Agency) in the __________________________ Multi-Agency Coordinating Group in setting priorities and allocating resources for fire emergencies.

2. Coordinate all prescribed fire activities in the __________________________ (Unit) and suspending all prescribed fire and issuance of burning permits when conditions warrant.

3. Ensure that only fully qualified personnel are used in wildland fire operations.

4. Coordinate, preposition, send, and order fire and aviation resources in response to current and anticipated zone fire conditions.

5. Oversee and coordinate the __________________________ Interagency Dispatch Center on behalf of the __________________________ (Agency).

6. Request and oversee distribution of severity funding for Unit Fire and Aviation.

7. Approve Fire Program requests of overtime, hazard pay, and other premium pay.

8. Ensure all incidents are managed in a safe and cost-effective manner.

9. Coordinate and provide all fire and prevention information needs to inform internal and external customers with necessary information.

10. Coordinate all fire funding accounts with the Budget Officer to assure unit fiscal guidelines are adhered to and targets are met.

11. Approve and sign aviation request forms.

12. Approve Red Cards in accordance with agency policy.

13. Authorized to hire Emergency Firefighters in accordance with the Emergency Worker Pay Plan.

Appendix D
Agency Administrator’s Briefing to Incident Management Team

Briefing Package for Incident Management Teams

The purpose of this template is to provide a format and content outline for the host unit to use when briefing an incident management team (IMT). Some items will not be relevant to some units; delete or add additional information as needed. An optional outline is included for those units that would like to use WFDSS to conduct the IMT briefing.

Overview for ALL Team Members

- Introduction – Agency Administrator
  - Other Agencies and Cooperators
- Objectives and Course of Action – Agency Administrator/FMO (use WFDSS as needed)
  - Objectives Tab – Incident Objectives and Incident Requirements
  - Course of Action Tab – Overview of strategic direction
- Situational update – Assigned IC or FMO (use WFDSS as needed)
  - Fire start date, cause
  - Situation Tab – Situational overview
    - Analysis
      - Short Term, Near Term and FSPro
    - Fire Environment and Safety
      - Est Ground Evacuation
      - Retardant Avoidance
    - Disturbance History (in the area)
      - Historical Fires
      - Fuel Treatments
    - Fire Weather and Danger
      - Significant Fire Potential – Predictive Services
      - RAWS stations
      - Local Fire Environment information (Fire Weather, Fire Behavior) – localized anomalies, terrain influences, weather patterns or fire behavior, current and predicted fire weather/fire behavior
    - Boundaries
      - Responsible/Jurisdictional boundaries
      - Federal Boundaries
      - County
    - Designated Areas
      - Wilderness/Potential Wilderness
      - Special designation
      - BLM – oil/gas/range/horse and burro

- Infrastructure
  - Facilities
  - Communication
  - Energy
  - Roads and Trails
- Natural and Cultural Resources
  - Air Quality
  - Critical Habitat
  - Sage Grouse Habitat
- Other considerations to include:
  - Current Planning Area in Published Decision
  - Values at Risk – or other considerations that aren’t in WFDSS
  - Resource Benefits – explain where fire is beneficial on the landscape
  - Assessment Tab – current risks and potential benefits (use WFDSS as needed)
- Risk and Complexity Analysis
- Benefits of fire on this landscape (type of fire, where, when)

- Decision and Costs – Agency Administrator or FMO (use WFDSS as needed)
  - Cost Tab – outline cost thresholds for current Decision
  - Decision Tab – Review the Rationale of the Agency Administrator
- Local Concerns – Agency Administrator or FMO
  - Environmental, Social, Political, Economic
  - Law Enforcement or Investigations if applicable
  - Area Closures – potential impacts to local income, outfitter guides, etc.
  - Initial Attack Responsibilities
  - Training Responsibilities – Inclusion of local and geographic area priority trainees
- Incoming IC Comments
- Closing Remarks – Agency Administrator
  - Agency Administrator’s Key Points from Leader’s Intent
  - Breakout Group Meetings to Follow

Potential contacts include: Acquisition management (i.e., contracting specialists, purchasing agency, contracting officers, grants and agreements); Union representatives; human resources management (i.e., OWCP contacts); IT information (i.e., ROSS/ISuite, customer helpdesk for agencies involved).

**Regional and Interagency**
Potential contacts may include Hospital Liaison(s), Incident Business Coordinator and Buying Team Coordinator, Regional Contracting Specialist (VIPR), Regional Contractor Liaison, State Department of Transportation, State Troopers, State Land Office Area Manager, local law enforcement, electric/power company, etc.
Appendix E

Wildland Fire Risk and Complexity Assessment

The Wildland Fire Risk and Complexity Assessment should be used to evaluate firefighter safety issues, assess risk, and identify the appropriate incident management organization. Determining incident complexity is a subjective process based on examining a combination of indicators or factors. An incident’s complexity can change over time; incident managers should periodically re-evaluate incident complexity to ensure that the incident is managed properly with the right resources.

Instructions:
Incident Commanders should complete Part A and Part B and relay this information to the Agency Administrator. If the fire exceeds initial attack or will be managed to accomplish resource management objectives, Incident Commanders should also complete Part C and provide the information to the Agency Administrator.

Part A: Firefighter Safety Assessment

Evaluate the following items, mitigate as necessary, and note any concerns, mitigations, or other information.

<table>
<thead>
<tr>
<th>Evaluate these items</th>
<th>Concerns/Mitigations/Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>LCES</td>
<td></td>
</tr>
<tr>
<td>Fire Orders and Watch Out Situations</td>
<td></td>
</tr>
<tr>
<td>Multiple operational periods have occurred without achieving initial objectives.</td>
<td></td>
</tr>
<tr>
<td>Incident personnel are overextended mentally and/or physically and are affected by cumulative fatigue.</td>
<td></td>
</tr>
<tr>
<td>Communication is ineffective with tactical resources and/or dispatch.</td>
<td></td>
</tr>
<tr>
<td>Operations are at the limit of span of control.</td>
<td></td>
</tr>
<tr>
<td>Aviation operations are complex and/or aviation oversight is lacking.</td>
<td></td>
</tr>
<tr>
<td>Logistical support for the incident is inadequate or difficult.</td>
<td></td>
</tr>
</tbody>
</table>
### Part B: Relative Risk Assessment

<table>
<thead>
<tr>
<th>Values</th>
<th>Notes/Mitigation</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>B1. Infrastructure/Natural/Cultural Concerns</strong></td>
<td></td>
</tr>
<tr>
<td>Based on the number and kinds of values to be protected, and the difficulty to protect them, rank this element low, moderate, or high. Considerations: key resources potentially affected by the fire such as urban interface, structures, critical municipal watershed, commercial timber, developments, recreational facilities, power/pipelines, communication sites, highways, potential for evacuation, unique natural resources, designated areas (i.e., wilderness), T&amp;E species habitat, and cultural sites.</td>
<td>L M H</td>
</tr>
<tr>
<td><strong>B2. Proximity and Threat of Fire to Values</strong></td>
<td>Far Near</td>
</tr>
<tr>
<td>Evaluate the potential threat to values based on their proximity to the fire, and rank this element low, moderate, or high.</td>
<td>L M H</td>
</tr>
<tr>
<td><strong>B3. Social/Economic Concerns</strong></td>
<td></td>
</tr>
<tr>
<td>Evaluate the potential impacts of the fire to social and/or economic concerns, and rank this element low, moderate, or high. Considerations: impacts to social or economic concerns of an individual, business, community or other stakeholder; degree of support for the wildland fire program and resulting fire effects; other fire management jurisdictions; tribal subsistence or gathering of natural resources; air quality regulatory requirements; public tolerance of smoke, including health impacts; potential for evacuation and ingress/egress routes; and restrictions and/or closures in effect or being considered.</td>
<td>L M H</td>
</tr>
<tr>
<td><strong>B4. Fuel Conditions</strong></td>
<td></td>
</tr>
<tr>
<td>Consider fuel conditions ahead of the fire and rank this element low, moderate, or high. Evaluate fuel conditions that exhibit high ROS and intensity for your area, such as those caused by invasive species or insect/disease outbreaks; and/or continuity of fuels.</td>
<td>L M H</td>
</tr>
<tr>
<td><strong>B5. Fire Behavior</strong></td>
<td></td>
</tr>
<tr>
<td>Evaluate the current and expected fire behavior and rank this element low, moderate, or high. Considerations: intensity; rates of spread; crowning; profuse or long-range spotting.</td>
<td>L M H</td>
</tr>
<tr>
<td><strong>B6. Potential Fire Growth</strong></td>
<td></td>
</tr>
<tr>
<td>Evaluate the potential fire growth, and rank this element low, moderate, or high. Considerations: Considerations would include current and expected fire growth based on fire behavior analysis and the weather forecast and/or the ability to control the fire.</td>
<td>L M H</td>
</tr>
</tbody>
</table>
### B7. Time of Season
Evaluate the potential for a long-duration fire and rank this element low, moderate, or high.

**Considerations:** Time remaining until a season ending event.

<table>
<thead>
<tr>
<th>Probability</th>
<th>Notes/Mitigation</th>
</tr>
</thead>
<tbody>
<tr>
<td>L Late</td>
<td>M Mid</td>
</tr>
</tbody>
</table>

### B8. Barriers to Fire Spread
Evaluate the barriers to fire spread and their potential to limit fire growth, and rank this element low, moderate, or high.

**Considerations:** If many natural and/or human-made barriers are present, rank this element low. If some barriers are present, rank this element moderate. If no barriers are present, rank this element high.

<table>
<thead>
<tr>
<th>Probability</th>
<th>Notes/Mitigation</th>
</tr>
</thead>
<tbody>
<tr>
<td>L Many</td>
<td>M Few</td>
</tr>
</tbody>
</table>

### B9. Seasonal Severity
Evaluate fire danger indices and rank this element low/moderate, high, or very high/extreme.

**Considerations:** Fire danger indices such as energy release component (ERC); drought status; live and dead fuel moistures; fire danger indices; adjective fire danger rating; geographic area preparedness level.

<table>
<thead>
<tr>
<th>Probability</th>
<th>Notes/Mitigation</th>
</tr>
</thead>
<tbody>
<tr>
<td>L/M</td>
<td>H VH/E</td>
</tr>
</tbody>
</table>

**Enter the number of items circled for each column.**

#### Relative Risk Rating (circle one):

- **Low**
  - Majority of items are “Low” with a few items rated as “Moderate” and/or “High.”

- **Moderate**
  - Majority of items are “Moderate” with a few items rated as “Low” and/or “High.”

- **High**
  - Majority of items are “High.” A few items may be rated as “Low” or “Moderate.”
### Part C: Organization

<table>
<thead>
<tr>
<th>Relative Risk Rating (from Part B)</th>
<th>L</th>
<th>M</th>
<th>H</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>C1. Potential Fire Duration</strong></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Evaluate the estimated length of time that the fire may continue to burn if no action is taken and amount of season remaining. Rank this element low, moderate, or high. Note: This will vary by geographic area.</td>
<td>N/A Very Short</td>
<td>L Short</td>
<td>M</td>
</tr>
</tbody>
</table>

| **C2. Incident Strategies (Course of Action)** |   |   |   |
| Evaluate the level of risk to firefighters and aviators required to successfully meet the current strategy and implement the course of action. Rank this element as very low, low, moderate, or high. Consider the likelihood that the strategy will be successful, the risks to firefighters and aviators; and whether there are clearly defined trigger points. | Very Low | L | M | H |

<p>| <strong>C3. Functional Concerns</strong> |   |   |   |
| Evaluate the need to increase organizational structure to adequately and safely manage the incident, and rank this element very low (minimal resources committed), low (adequate), moderate (some additional support needed), or high (current capability inadequate). Considerations: Incident management functions (logistics, finance, operations, information, planning, safety, and/or specialized personnel/equipment) are inadequate and needed; availability of resources; access to EMS support; heavy commitment of local resources to logistical support; ability of local businesses to sustain logistical support; substantial air operation which is not properly staffed; worked multiple operational periods without achieving initial objectives; incident personnel overextended mentally and/or physically; Incident Action Plans, briefings, etc. missing or incomplete; performance of firefighting resources affected by cumulative fatigue; and ineffective communications. | Very Low | L | M | H |</p>
<table>
<thead>
<tr>
<th>Socio/Political Concerns</th>
<th>Notes/Mitigation</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>C4. Objective Concerns</strong></td>
<td><strong>Evaluate the complexity of the incident objectives and rank this element very low, low, moderate, or high.</strong></td>
</tr>
<tr>
<td></td>
<td>Considerations: clarity; ability of current organization to accomplish; disagreement among cooperators; tactical/operational restrictions; complex objectives involving multiple focuses; objectives influenced by serious accidents or fatalities.</td>
</tr>
<tr>
<td></td>
<td><strong>Very Low</strong></td>
</tr>
<tr>
<td><strong>C5. External Influences</strong></td>
<td><strong>Evaluate the effect external influences will have on how the fire is managed and rank this element very low, low, moderate, or high.</strong></td>
</tr>
<tr>
<td></td>
<td>Considerations: limited local resources available for initial attack; increasing media involvement, social/print/television media interest; controversial fire policy; threat to safety of visitors from fire and related operations; restrictions and/or closures in effect or being considered; pre-existing controversies/relationships; smoke management problems; sensitive political concerns/interests.</td>
</tr>
<tr>
<td></td>
<td><strong>Very Low</strong></td>
</tr>
<tr>
<td><strong>C6. Ownership Concerns</strong></td>
<td><strong>Evaluate the effect ownership/jurisdiction will have on how the fire is managed and rank this element very low, low, moderate, or high.</strong></td>
</tr>
<tr>
<td></td>
<td>Considerations: disagreements over policy, responsibility, and/or management response; fire burning or threatening more than one jurisdiction; potential for unified command; different or conflicting management objectives; potential for claims (damages); disputes over suppression responsibility.</td>
</tr>
<tr>
<td></td>
<td><strong>Very Low</strong></td>
</tr>
</tbody>
</table>

Enter the number of items circled for each column.
### Part C: Organization (continued)

#### Recommended Organization (circle one):

<table>
<thead>
<tr>
<th>Type</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Type 5</td>
<td>Majority of items rated as “Very Low”; a few items may be rated in other categories.</td>
</tr>
<tr>
<td>Type 4</td>
<td>Majority of items rated as “Low,” with some items rated as “Very Low,” and a few items rated as “Moderate” or “High.”</td>
</tr>
<tr>
<td>Type 3</td>
<td>Majority of items rated as “Moderate,” with a few items rated in other categories.</td>
</tr>
<tr>
<td>Type 2</td>
<td>Majority of items rated as “Moderate,” with a few items rated as “High.”</td>
</tr>
<tr>
<td>Type 1</td>
<td>Majority of items rated as “High”; a few items may be rated in other categories.</td>
</tr>
</tbody>
</table>

#### Rationale:

Use this section to document the incident management organization for the fire. If the incident management organization is different than the Wildland Fire Risk and Complexity Assessment recommends, document why an alternative organization was selected. Use the “Notes/Mitigation” column to address mitigation actions for a specific element, and include these mitigations in the rationale.

Name of Incident: __________________________ Unit(s): __________________________

Date/Time: ______________ Signature of Preparer: __________________________

The RCA is also available at [https://www.nwcin.gov/publications/210](https://www.nwcin.gov/publications/210).
Appendix F
Indicators of Incident Complexity

Common indicators may include the area (location) involved; threat to life, environment and property; political sensitivity, organizational complexity, jurisdictional boundaries, values at risk, and weather. Most indicators are common to all incidents, but some may be unique to a particular type of incident. The following are common contributing indicators for each of the five complexity types.

### Type 5 Incident Complexity Indicators

<table>
<thead>
<tr>
<th>General Indicators</th>
<th>Span of Control Indicators</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Incident is typically terminated or concluded (objective met) within a short time once resources arrive on scene</td>
<td>• Incident Commander (IC) position filled</td>
</tr>
<tr>
<td>• For incidents managed for resource objectives, minimal staffing/oversight is required</td>
<td>• Single resources are directly supervised by the IC</td>
</tr>
<tr>
<td>• Resources vary from two to six firefighters</td>
<td>• Critical Infrastructure, or Key Resources, not adversely affected</td>
</tr>
<tr>
<td>• Formal Incident Planning Process not needed</td>
<td>• Limited effects to population immediately surrounding the incident</td>
</tr>
<tr>
<td>• Written Incident Action Plan (IAP) not needed</td>
<td>• Critical Infrastructure, or Key Resources, not adversely affected</td>
</tr>
<tr>
<td>• Minimal effects to population immediately surrounding the incident</td>
<td>• IC role filled</td>
</tr>
<tr>
<td>• Critical Infrastructure, or Key Resources, not adversely affected</td>
<td>• Resources either directly supervised by the IC or supervised through an ICS Leader position</td>
</tr>
<tr>
<td></td>
<td>• Task Forces or Strike Teams may be used to reduce span of control to an acceptable level</td>
</tr>
<tr>
<td></td>
<td>• Command Staff positions normally not filled to reduce workload or span of control</td>
</tr>
</tbody>
</table>

### Type 4 Incident Complexity Indicators

<table>
<thead>
<tr>
<th>General Indicators</th>
<th>Span of Control Indicators</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Incident objectives are typically met within one operational period once resources arrive on scene, but resources may remain on scene for multiple operational periods</td>
<td>• IC role filled</td>
</tr>
<tr>
<td>• Multiple resources may be needed</td>
<td>• Resources either directly supervised by the IC or supervised through an ICS Leader position</td>
</tr>
<tr>
<td>• Resources may require limited logistical support</td>
<td>• Task Forces or Strike Teams may be used to reduce span of control to an acceptable level</td>
</tr>
<tr>
<td>• Formal Incident Planning Process not needed</td>
<td>• Command Staff positions normally not filled to reduce workload or span of control</td>
</tr>
<tr>
<td>• Written Incident Action Plan (IAP) not needed</td>
<td>• General Staff position(s) normally not filled to reduce workload or span of control</td>
</tr>
<tr>
<td>• Limited effects to population surrounding incident</td>
<td>• Critical Infrastructure or Key Resources may be adversely affected, but mitigation measures are uncomplicated and can be implemented within one Operational Period</td>
</tr>
<tr>
<td>• Critical Infrastructure or Key Resources may be adversely affected, but mitigation measures are uncomplicated and can be implemented within one Operational Period</td>
<td>• Elected and appointed governing officials, stakeholder groups, and political organizations require little or no interaction</td>
</tr>
</tbody>
</table>
## Type 3 Incident Complexity Indicators

<table>
<thead>
<tr>
<th>General Indicators</th>
<th>Span of Control Indicators</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Incident typically extends into multiple operational periods</td>
<td>• IC role filled</td>
</tr>
<tr>
<td>• Incident objectives usually not met within the first or second operational period</td>
<td>• Numerous resources supervised indirectly through the establishment and expansion of the Operations Section and its subordinate positions</td>
</tr>
<tr>
<td>• Resources may need to remain at scene for multiple operational periods, requiring logistical support</td>
<td>• Division Supervisors, Group Supervisors, Task Forces, and Strike Teams used to reduce span of control to an acceptable level</td>
</tr>
<tr>
<td>• Numerous kinds and types of resources may be required</td>
<td>• Command Staff positions may be filled to reduce workload or span of control</td>
</tr>
<tr>
<td>• Formal Incident Planning Process is initiated and followed</td>
<td>• General Staff position(s) may be filled to reduce workload or span of control</td>
</tr>
<tr>
<td>• Written Incident Action Plan (IAP) needed for each Operational Period</td>
<td>• ICS functional units may need to be filled to reduce workload</td>
</tr>
<tr>
<td>• Responders may range up to 200 total personnel</td>
<td></td>
</tr>
<tr>
<td>• Population surrounding incident affected</td>
<td></td>
</tr>
<tr>
<td>• Critical Infrastructure or Key Resources may be adversely affected and actions to mitigate effects may extend into multiple Operational Periods</td>
<td></td>
</tr>
<tr>
<td>• Elected and appointed governing officials, stakeholder groups, and political organizations require some level of interaction</td>
<td></td>
</tr>
</tbody>
</table>

## Type 2 Incident Complexity Indicators

<table>
<thead>
<tr>
<th>General Indicators</th>
<th>Span of Control Indicators</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Incident displays moderate resistance to stabilization or mitigation and will extend into multiple operational periods covering several days</td>
<td>• IC role filled</td>
</tr>
<tr>
<td>• Incident objectives usually not met within the first several Operational Periods</td>
<td>• Large numbers of resources supervised indirectly through the expansion of the Operations Section and its subordinate positions</td>
</tr>
<tr>
<td>• Resources may need to remain at scene for up to 7 days and require complete logistical support</td>
<td>• Branch Director position(s) may be filled for organizational or span of control purposes</td>
</tr>
<tr>
<td>• Numerous kinds and types of resources may be required including many that will trigger a formal demobilization process</td>
<td>• Division Supervisors, Group Supervisors, Task Forces, and Strike Teams used to reduce span of control to an acceptable level</td>
</tr>
<tr>
<td>• Formal Incident Planning Process is initiated and followed</td>
<td>• All Command Staff positions filled</td>
</tr>
<tr>
<td>• Written Incident Action Plan (IAP) needed for each Operational Period</td>
<td>• All General Staff positions filled</td>
</tr>
<tr>
<td>• Responders may range from 200 to 500 total</td>
<td>• Most ICS functional units filled to reduce workload</td>
</tr>
<tr>
<td>• Incident requires an Incident Base and several other ICS facilities to provide support</td>
<td></td>
</tr>
<tr>
<td>• Population surrounding general incident area affected</td>
<td></td>
</tr>
<tr>
<td>• Critical Infrastructure or Key Resources may be adversely affected, or possibly destroyed, and actions to mitigate effects may extend into multiple Operational Periods and require considerable coordination</td>
<td></td>
</tr>
<tr>
<td>• Elected and appointed governing officials, stakeholder groups, and political organizations require a moderate level of interaction</td>
<td></td>
</tr>
</tbody>
</table>
## Type 1 Incident Complexity Indicators

<table>
<thead>
<tr>
<th>General Indicators</th>
<th>Span of Control Indicators</th>
</tr>
</thead>
<tbody>
<tr>
<td>Incident displays high resistance to stabilization or mitigation and will extend into numerous operational periods covering several days to several weeks</td>
<td>IC role filled</td>
</tr>
<tr>
<td>Incident objectives usually not met within the first several Operational Periods</td>
<td>Large numbers of resources supervised indirectly through the expansion of the Operations Section and its subordinate positions</td>
</tr>
<tr>
<td>Resources may need to remain at scene for up to 14 days, require complete logistical support, and several possible personnel replacements</td>
<td>Branch Director Position(s) may be filled for organizational or span of control purposes</td>
</tr>
<tr>
<td>Numerous kinds and types of resources may be required, including many that will trigger a formal demobilization process</td>
<td>Division Supervisors, Group Supervisors, Task Forces, and Strike Teams used to reduce span of control</td>
</tr>
<tr>
<td>DOD assets, or other nontraditional agencies, may be involved in the response, requiring close coordination and support</td>
<td>All Command Staff positions filled and many include assistants</td>
</tr>
<tr>
<td>Complex aviation operations involving multiple aircraft may be involved</td>
<td>All General Staff positions filled and many include deputy positions</td>
</tr>
<tr>
<td>Formal Incident Planning Process is initiated and followed</td>
<td>Most or all ICS functional units filled to reduce workload</td>
</tr>
<tr>
<td>Written Incident Action Plan (IAP) needed for each Operational Period</td>
<td></td>
</tr>
<tr>
<td>Responders may range from 500 to several thousand total</td>
<td></td>
</tr>
<tr>
<td>Incident requires an Incident Base and numerous other ICS facilities to provide support</td>
<td></td>
</tr>
<tr>
<td>Population surrounding the region or state where the incident occurred is affected</td>
<td></td>
</tr>
<tr>
<td>Numerous Critical Infrastructure or Key Resources adversely affected or destroyed. Actions to mitigate effects will extend into multiple Operational Periods spanning days or weeks and require long-term planning and considerable coordination</td>
<td></td>
</tr>
<tr>
<td>Elected and appointed governing officials, stakeholder groups, and political organizations require a high level of interaction</td>
<td></td>
</tr>

Appendix G

Sample Delegations of Authority AA to IMT and Leader’s Intent

Delegation of Authority
Colorado State Office
Montrose Field Office

As of 1800, May 20, 2005, I have delegated authority to manage the Crystal River Fire, Number E353, San Juan Resource Area, to Incident Commander Bill Jones and his Incident Management Team.

The fire, which originated as four separate lightning strikes occurring on May 17, 2005, is burning in the Crystal River Drainage. My considerations for management of this fire are:

1. Provide for firefighter and public safety.
2. Manage the fire with as little environmental damage as possible.
3. Key cultural features requiring priority protection are:
4. Key resources considerations are:
5. Restrictions for suppression actions include:
6. Minimum tools for use are:
7. My agency Resource Advisor will be:
8. The fire borders are:
9. Manage the fire cost-effectively for the values at risk.
10. Provide training opportunities for the resources area personnel to strengthen our organizational capabilities and work with the Geographic Area Training Representative (GATR) to identify opportunities for Priority Trainees.
11. Minimum disruption of residential access to private property, and visitor use consistent with public safety.
12. Efforts should be made to minimize some impacts to communities and ensure that communication is maintained with the state Air Quality Bureau.

(Signature and Title of Agency Administrator) (Date)

Amendment to Delegation of Authority

The Delegation of Authority dated May 20, 2005, issued to Incident Commander Bill Jones for the management of the Crystal River Fire, number E353, is hereby amended as follows. This will be effective at 1800, May 22, 2005.

13. Key cultural features requiring priority protection are:
14. Use of tracked vehicles authorized to protect Escalante Cabin.

Signature and Title of Agency Administrator Date
Delegation of Authority for *Incident Name*

Date:

To: Incident Commander – *Name of IC*

*From: Jurisdictional Agencies*

*Subject: Incident Number and jurisdictional unit*

Effective at *XXXX hours* on *Provide the Date*, you are delegated authority for the management of the *XXXX* Incident on the *XXXX jurisdictional Unit* – *include other jurisdictions if needed*. You have full authority for incident management activities on *this/these jurisdictions(s)* within the framework of law, agency policies, and direction provided within the Delegation of Authority, Wildland Fire Decision Support System Decision, the Leader’s Intent letter (optional) and the Team Briefing Package provided.

This Delegation carries with it the full authority for the management of the resources (personnel and equipment), costs, and rehabilitation of incident management efforts directly associated with this *incident(s)*. Your primary responsibility is to organize, manage and direct your assigned resources for safe, efficient and effective management of the incident. You are accountable to the Agency Administrator or designated representative.

**Agency Administrator**

*Agency/Jurisdictional Unit*

*Date/Time*

---

I accept this Delegation:

**Incident Commander**

*Date/Time*
Leader’s Intent

This is an optional document with the following information provided as a template. The purpose is to provide information to an IMT that is not directly related to the strategic direction for managing a wildfire (strategic direction belongs in the WFDSS Decision). Some items will not be relevant to your Unit; delete or add additional information as needed. Items italicized and underlined are areas where you should review the information and either add unit-specific information or delete those statements.

Overview
This leader’s intent document is one piece of many components of the entire briefing package provided to the incident management team (IMT). In addition to this leader’s intent letter, the IMT will also receive the following documentation to support the management of this incident:

• Delegation of Authority
• Published decision from the Wildland Fire Decision Support System
• Briefing package

Communications
It is expected we will meet daily or as needed to be informed on significant accomplishments or issues. Daily discussion points include but aren’t limited to the following:

• Safety
• Other identified values at risk
• Risk trade-offs
• Relationships with partners and stakeholders
• External communication
• Operational effectiveness (Your assessment of likelihood of success of achieving all objectives)
• Benchmarks based on team capabilities, span of control, daily progress
• Complexity
• Cost
• Ramp up and ramp down strategies
  o Final fire package

Expect to have a preliminary team evaluation at the incident closeout and a final evaluation at the end of fire season when all incident business transactions have been finalized.

Expanded dispatch is in place, please coordinate and work through XX expanded dispatch center located at the interagency communication center for additional resources or support needs.

Strategic Planning
Successful management of this fire requires a common understanding of the values that require protection, their priority for protection, the probability they will be impacted, under what circumstances they require protection, what protection might look like, and how we manage our response. Strategic direction is aligned with the Land and Resource Management Plan/Resource Management Plans and associated amendments as detailed in the WFDSS Decision. It is expected that you and your necessary staffs read and follow
The team should assist with the following:
- Keep line officer informed of significant accomplishments/issues of which can be documented in the Periodic Assessment throughout the duration of the incident.
- Through your risk assessment process, provide feedback regarding needed changes to the Incident Objectives and Course of Action to mitigate unnecessary risk to firefighters.
- Provide input regarding any other identified values to be addressed in planning operations and in the WFDSS Decision.
- Provide input to the current Risk and Complexity Analysis (RCA) in WFDSS and the need for updates; RCA updates can be made to document changed conditions without publishing a new decision.
- Provide support in updating and revising the decision as necessary, and/or determining if an update to components of the decision or documentation is needed (e.g., expectation that the planning area will be breached).
- **Develop, update, and revise management action points as necessary to protect identified values (e.g., structural inholdings, communication sites, culturally sensitive areas)** (The unit can list values here, or refer to WFDSS).

Throughout the life of the incident there will likely be oral discussions, agreements or changes in tactics/management of the fire as a whole that deviate from this letter or the WFDSS Decision documentation. Such deviations must be discussed with **me** in person so that we can determine solutions and update the WFDSS Decision as needed.

**Human Resources**
- All personnel assigned shall be treated with dignity and respect. Manage the human resources assigned to the fire in a manner that promotes a positive and harassment-free work environment and creates a “no tolerance” atmosphere for harassment, alcohol, or illegal drug use.
- **All personnel assigned should receive evaluations prior to leaving the incident. Encourage supervisors to provide meaningful feedback regarding performance and conduct.**

**Safety**
- Visitor and public safety is a concern.
  - Provide timely information to publics impacted by the fire/closure areas.
  - Coordinate closures/evacuations with Law Enforcement as identified in the briefing package.
  - If needed, utilize the appropriate Cooperative Law Enforcement Agreement in the briefing package.
- Coordinate and consult with Safety and Health Manager or designated Agency Representative as identified in the briefing package.
- Coordinate hazardous material matters with unit Safety Officer. Specific information has been included in the briefing package.
- **Camp security is advised due to base camp’s proximity to town.**
Known safety hazards within the proximity of the fire area; e.g., grizzly bear baiting station at XX location, grizzly habitat (considerations for camp, spike camps, night operations, etc.), large standing snag patch from fire, trees are severely weakened, excessively steep terrain (provide a geographical location) with large rock outcrops and no values of concern.

Operations
Attention to firefighter and aviation safety is an absolute necessity! Incident Action Plans should reflect leader’s intent for the incident. Tactical actions will be assessed and effective mitigation measures will be in place to avoid putting firefighting personnel at unnecessary risk; Consider not implementing tactical actions by assessing the value being protected versus the risk (even if mitigated) required to protect it.

- Structure Protection
  - Ensure firefighters who engage in structure protection are staying within their tactical training, capabilities, and agency policies.
  - Document significant issues for values at risk within the ICS 209.
  - Utilize the Community and Structure Fire Protection Guidelines (refer to your local guidance if relevant).

- Retardant
  - Review the fire retardant avoidance maps and documentation provided during the IMT in-brief OR in WFDSS, and coordinate with the Resource Advisor as identified in the briefing package.
  - Follow reporting guidelines for retardant use as defined in the briefing package.
  - Follow the guidance/protocol within the Wildfire Guidelines for Resource Protection if retardant is misplaced.
  - Use retardant only when and where it is expected to be successful in slowing fire spread or reducing intensities so ground firefighters may engage the fire more safely with a higher likelihood of success.

- Aviation
  - Aviation safety is a high priority. An Aviation Risk Assessment will be completed on all aviation missions in support of fire management. For additional guidance regarding Aviation Resources or local protocol refer to the Briefing Package and work with the Unit Aviation Officer or their designee as a liaison.
  - An initial TFR has been established for the fire area, coordinate changes to the current TFR with the Unit Aviation Officer.

- Initial Attack Operations
  - You will be responsible for Initial Attack activities within your designated TFR.
  - The local unit may call upon you for additional support as needed for Initial Attack activities.

- Cultural and Resource Protection and/or Enhancement
  - Avoid damage to sensitive cultural resources within the fire area; coordinate suppression actions with the line resource.
advisor/archeologist. Specific sensitive cultural information was included within the briefing package.

○ Ensure all tactical actions adhere to the Unit Wildfire Guidelines for Resource Protection and develop a rehabilitation plan for the impacts associated with those actions.

○ Not all wildfire is detrimental in this Planning Area. Specific strategic direction is provided in the WFDSS Decision.
Public Information

- Develop a public information plan for the incident within XX hours and work closely with the unit Public Affairs Specialist to disseminate information to internal staff, external partners, and interested publics. Refer to the briefing package for names and contacts.

- Accuracy and timeliness of public information is important. Public meetings should be held as needed and on a routine basis.

- Maintain contact with appropriate agencies, elected officials, business leaders and members of the public as identified within the briefing package.

- Informational meetings or briefings and news releases are to be coordinated with the Agency Representatives as identified within the briefing package.

Finance

- Document decisions that have incident cost ramifications within the IC Daily log and provide clear rationale for the decisions.

- Utilize the XX Incident Business Plan; please work with the designated INBA for the incident. Refer to the briefing package for contact information.

- A buying team is in place, XX Dispatch Center.

- Develop a total cost projection for managing the incident in line with the strategic direction provided for federal lands, this needs to be completed within XX hours of being delegated authority.

- Provide assistance in developing a cost share agreement as mutually agreed upon by the XX jurisdictions involved.

Logistics

- Telecommunications contracts have been previously established with Verizon for phone and data plans to support IMT base camps. Specific information is included within the briefing package.

- The Local Unit has previously identified base camp and spike camp locations, please evaluate these areas before establishing new locations. Land use agreements for these sites are in place, coordinate with the Incident Business Advisor for specific information.

- Maps of these areas will be provided within the briefing package.
  - Invasive and noxious weeds – Vehicle and equipment washing is required on fires within XX area. Insert localized information. Refer to Wildfire Guidelines for Resource Protection on the local unit for additional information (provided with the briefing package). Please direct questions to the assigned Resource Advisor.

Other

- To build capacity, the use of trainees is strongly suggested to be incorporated into team functions where available. Local trainees will receive first priority for assignments. A list of the local trainees is included within the briefing package.

- Work with the Geographic Area Training Representative (GATR) to identify opportunities for Priority Trainees.

- Coordinate and work closely with the following positions/personnel – contact information as well additional contacts maybe found in the briefing package.

- Line Officer
APPENDIX G  SAMPLE DELEGATIONS OF AUTHORITY AA TO IMT AND LEADER’S INTENT

- District FMO/Unit FMO
- Unit Aviation Officer
- Interagency Dispatch Center Manager
- Public Affairs Officer
- Unit Safety Officer
- Incident Business Advisor
- Resource Advisor
- Agency/Interagency Partners
- Other IMTs in the adjoining area

</tbody>
</table>

At the conclusion of each incident management team (IMT) assignment, the agency administrator or representative should complete this initial performance evaluation (sections 1-5). This evaluation should be discussed directly with the incident commander. The initial performance evaluation should be delivered by the agency administrator without delay to the incident commander, the state/regional fire management officer, and the chair of the IMT’s home geographic area multi-agency coordination group to ensure prompt follow-up to any issues of concern.

Complete the following evaluation narratives and rating for each question

0 – did not achieve expectations  3 – met expectations  5 – excelled

1. How well did the Team accomplish the objectives described in the Wildland Fire Decision Support System (WFDSS) the Delegation of Authority, and the Agency Administrator briefing?

Circle one 0 1 2 3 4 5

(Explain)

2. How well did the team manage the cost of the incident? Did the team follow agency incident operating guidelines? Were follow-up issues (e.g., invoices, OWCP and vendor issues) identified and documented for the Agency Administrator?

Circle one 0 1 2 3 4 5

(Explain)
3. How did the team demonstrate sensitivity to resource limits/constraints and environmental concerns?

<table>
<thead>

Sample Delegation – Lessons Learned Review (LLR)

Memorandum

To: LLR Facilitator; [Title of person/office this is meant for]

From: Delegating Official

Subject: Delegation of Authority – [Incident name] LLR

Situation Summary:

You are hereby designated the authority to lead and conduct a LLR for [Incident name]. The review process will begin at [Identify LLR start time, date, and location]. The Fire Staff and Fire Management Office have identified the group of employees who will also be participating. That information will be provided to you upon your arrival.

You have the authority to tailor your team and the LLR process to fit the situation and your style of facilitation. However, I would like you to utilize the guidance outlined in the Interagency Standards for Fire and Fire Aviation Operations Chapter 18, while conducting the LLR. This includes:

- convening the participants;
- identifying facts of the event and developing a chronological narrative of the event;
- identifying underlying reasons for success or failure;
- identifying what was learned and what should/could be done differently in the future;
- identify any recommendations that would prevent future similar occurrences; and
- providing a final, written report covering the above items, which is due to me within two weeks of the event occurrence.

If you need any assistance, your primary contact will be [Name of primary contact].

Thank you for your time and assistance.

Appendix L
Delegation of Authority – FAST

Delegation of Authority

Geographic Area

Fire and Aviation Safety Team (FAST)

Situation Summary (issues and concerns/reason for ordering the FAST)

Objectives (measurable)

Team Skills Required (per objectives listed above)

The final team composition will be determined at time of dispatch and members named on the resource order.

Mission
The FAST is to conduct an independent assessment and evaluation of operational and managerial activities (related to the specific objectives stated above) at the following locations (mission segments):

The team may determine visits to other incidents/organizations/operations as appropriate, and may do so after coordination with the GMAC. The FAST will contact the GMAC Coordinator (describe frequency of contact):

The FAST is to provide technical or managerial assistance when requested and where necessary to immediately correct an identified, critical problem. The FAST may also provide short-term assistance in managing situations or incidents when requested by the incident, organization, or operation.

Protocols
The FAST will organize and conduct an entry briefing with the appropriate managers of the locations/incidents identified previously. The entry briefing will provide the objectives and operational parameters of the mission.
Once the mission segment is completed, the FAST will organize and conduct an exit briefing with the same officials or their designees, during which a draft of the mission-segment report will be presented and discussed. Components of this report will include:

- Purpose and Objectives
- Findings, Commendations, and Recommendations
- Follow-up Actions Needed
- Immediate
- Long-term
- Scope (local, area, national)
- Copy of the Delegation of Authority

The FAST will contact the GMAC Coordinator.

FAST will provide a final written report to the GMAC Coordinator upon completion of all mission segments. This report will include:

- FAST Final Report Outline
- Executive Summary
- Purpose and Objectives
- Summary (Findings, Recommendations, Commendations, Assistance Provided)
- Critical and Immediate Follow-up Actions Required
- Introduction
- Methods and Procedures
- Mission Segments (Summary of Incidents, Organizations, Operations Reviewed. Include copies of Mission Segment Reports)
- Analysis
- Findings and Trends, Commendations, and Recommendations
- Follow-up Actions Needed
- Immediate
- Long-term
- Scope (local, area, national)
- A copy of the Delegation of Authority

The _______________ Multi-Agency Coordination Group hereby charters and delegates the preceding authority to _______________, FAST Leader, effective on ____________.

**APPENDIX M-2**

**Release Date: January 2020**
Appendix N
Wildland Fire Decision Support System Information

WFDSS Overview

The Wildland Fire Decision Support System (WFDSS) is an interagency, web-based application that helps agency administrators and fire managers make risk-informed decisions for all types of wildland fires, regardless of complexity. WFDSS integrates the various applications used to manage incidents into a single risk-informed, collaborative system to streamline the analysis and reporting processes, providing one decision documentation system tiered to Land and/or Resource Management Plans.

The application’s home page can be accessed at https://WFDSS.usgs.gov.

WFDSS Account Information

The WFDSS application is intended for use by the US federal government for managing wildland fires.

Qualified users (federal and Tribal employees and non-federal WFDSS partners) can request accounts on the WFDSS Production (for live incidents) or Training (training incidents only) login pages and a single account provides access to each system. Additional information about requesting an account can be found at https://wfdss.usgs.gov/wfdss_help/WFDSSHelp_request_acct.html.

Federal accounts are granted automatically, non-federal accounts are granted by Geographic Area Editor (GAE) or National Editors (NE), depending on the geographic area a user’s account is associated with (Note: Each federal entity has different overlapping regions which may not coincide with geographic areas. A GAE from a perceived different geographic area may assist you as a result.).

Users work with GAES, NEs, and the Customer Help Desk to manage locked accounts, disabled accounts and password resets. The help topics Requesting a Password Reset, Understanding Locked User Accounts and Re-enabling a Disabled Account provide additional information, they can be located in the WFDSS Online help available at https://wfdss.usgs.gov/wfdss_help/index.htm.

WFDSS User Roles

User Roles in WFDSS correspond to permissions which allow users to perform certain tasks within the application. Newly activated accounts are assigned a Viewer role but within the application, users can request Author, Dispatcher, Data Manager, or Fire Behavior Specialist roles as necessary. Various support roles exist as well, and include Geographic Area Editor, National Editor, Administrator and Help Desk. User role requests are granted by Geographic and National Editors, depending on the geographic area and role requested.

- Users assigned the Viewer role can view published content but can only engage in incident documentation if assigned incident privileges.
• The Author role is required for users to create and/or own incidents and manage the decision documentation process.
• The Dispatcher and Data Manager roles are typically designated at the local level to manage an Administrative Unit’s incident information and spatial data.
• The Fire Behavior Specialist role can be requested/granted when a certain degree of fire behavior analysis training has been completed (training and experience culminating in S491 and S495).
• The Geographic Area Editor role is a primary support role for Authors, Dispatchers, Data Managers and Fire Behavior Specialists; users assigned this role have implicit ownership of incidents within their geographic area, regardless of agency. Additional information about GAE duties is included in the WFDSS Training and Support section.
• The National Editor role has maximum authority relative to WFDSS incident management; users assigned this role have implicit ownership of all incidents in WFDSS.

The WFDSS User Roles help topic provides additional information about user roles and can be found in the WFDSS online help available at https://wfdss.usgs.gov/wfdss_help/index.htm.

### WFDSS Incident Privileges

Incident privileges are assigned and managed by incident owners at the time of (and are specific to) an incident. These privileges allow users to Own, Edit, Review, or Approve decision content. Users must be assigned the Author user role to own incidents, but users with any role can edit, review or approve decisions. If a change in incident privileges is necessary for an incident, contact the incident owner(s) to coordinate the change. Incident Privileges and Managing Incident Privileges are two topics that provide additional information; they can be searched for in the WFDSS help.

### WFDSS Training and Support

A variety of WFDSS training and support materials are located on the WFDSS home page. Here you can access modeling and decision learning resources, videos and various white papers and supporting documents. The Hot Picks section provides links to annual refresher materials as well as the most common WFDSS-related offerings; it’s a column located on the right side of the WFDSS home page. The Training and Related References sections of the WFDSS home page are available here, respectively: https://wfdss.usgs.gov/wfdss/WFDSS_Training.shtml and https://wfdss.usgs.gov/wfdss/WFDSS_Resources.shtml.

Within the WFDSS application, the online help is a comprehensive set of help topics that are mapped to corresponding pages in the application. Click the help icon in the upper right of any page to access specific help information for any...
The online help can also be accessed here: https://wfdss.usgs.gov/wfdss_help/index.htm.

Geographic Area Editors Support of WFDSS Users, Incidents and Agencies

Geographic Area Editors (GAE) are another source of WFDSS training and support. Their primary role is to support WFDSS users and incidents within their Geographic Area (GA), serve as interagency technical experts, and Point of Contacts for their agency or bureau.

GAEs from various agencies are typically designated within each GA. GAEs work cooperatively for the benefit of all users within their GA and are both able and expected to assist any caller from any agency within their GA.

Geographic Area Editors WFDSS Duties

- Grants and removes user roles (Viewer, Author, Dispatcher, Fire Behavior Specialist, and Data Manager) in the Training and Production systems within their GA.
  - Serves as a WFDSS expert to support WFDSS users within their GA.
  - Assists or otherwise provides oversight in the development of decision content for WFDSS decisions.
  - Provides “WFDSS Point of Contact (POC)” technical help during off hours and weekends.
  - Provides training and answers technical “how to” questions.

- Provides incident support within their GAs as needed, and when an incident owner is unavailable. Geographic Area Editors can:
  - Edit any WFDSS incident within their GA, in coordination with incident owners, editors and/or Approving Official(s);
  - Develop and share filters (groups, incident, analysis, and intelligence);
  - Upload incident and/or analysis shapefiles;
  - Transfer/modify incident ownership;
  - Grant incident privileges; and
  - Edit jurisdictional point of origin (in coordination with local unit and incident).

- Serves as Geographic Area POC for their agency or bureau:
  - Facilitates interagency cooperation and coordination in support of multijurisdictional incidents and field users.
  - Consults fire and resource management staff and agency leadership as needed on WFDSS decision content.
  - Coordinates with and provides backup to other GAEs within their GA.
  - Disables agency/bureau user accounts within their GA.
  - Disseminates technical information such as upgrades to the WFDSS system, “how to” guidance and training materials/announcements.
  - Participates in GAE calls to keep up to date on system changes or other relevant information to be shared with field units.
 Verification of security training for non-federal account requests.
- Assists with the reactivation of disabled accounts within their GA.

When a user with a disabled account contacts a GA editor, the GA can assign the user a role in WFDSS Production and it automatically syncs with the user’s Training account. The user can then contact the Help Desk to reset their password and unlock the account.

**Geographic Area Editors WFDSS Limitations**

- Cannot reset passwords (users must contact the help desk to reset their password and unlock their account).
- Do not have privileges specific to Fire Behavior Specialist, Administrator or Helpdesk.
- Cannot view disabled accounts for users in other GAs.

**Fire Behavior Analysis**

Fire behavior analysis is incorporated into WFDSS, in the form of the Fire Spread Probability model (FSPro), Basic Fire Behavior (Basic), Short Term Fire Behavior (STFB) and Near Term Fire Behavior (NTFB). A comparison of these models (as well as FlamMap and FARSITE) can be found on the WFDSS homepage under the Training menu option (https://wfdss.usgs.gov/wfdss/WFDSS_Training.shtml), Modeling Learning Resources section.

WFDSS users assigned the Fire Behavior Specialist (FBS) role are responsible for fulfilling analysis needs for incidents. FBSs can be local; assigned to incident management teams in the form of LTANs, FBANs or GSANs; or provide assistance remotely. It’s helpful to identify local FBSs pre-season to understand the local capacity for analysis assistance.

If a local FBS is not available to provide analysis for an active incident, you can request assistance by one of the following options: selecting Fire Behavior Request from the Information tab of an Incident and submitting the request (GAE’s are monitoring these requests for their units), contacting a Geographic Area Editor directly, or calling the Analysis & Decision Content Support number listed on the WFDSS home page (### 208-473-8107 208-387-5253). Additional information about requesting assistance for an incident can be found on the Decision Support section of the Wildland Fire Management Research, Development and Application group home page at https://wfmrda.nwcg.gov/decision_support.php.

**Relative Risk Assessment**

The Relative Risk Assessment is required before publishing a Decision for an incident. Its purpose is to assist you in planning for, assessing, and managing your incidents. Incident Owners or Editors can perform the assessment, which provides a quick but comprehensive assessment of the risk of the fire. This is a...
qualitative process that can be completed in less time than a quantitative long-term risk assessment. The Relative Risk Assessment chart uses three risk components:

- values
- hazard
- probability

Each of these components is assessed independently. As the graphs for each component are completed, you can document thoughts/reasons for inputs in accompanying text boxes. This text automatically populates in the WFDSS decision but the graphs themselves do not (they can be manually added if you choose). The three outputs are then evaluated in a final step that provides the Relative Risk rating for the fire. From the Relative Risk rating, guidance is provided within the system to assist the Owner/Author in determining the level of analysis needed, considerations for the incident and documentation of the Decision. The help topics About Relative Risk and Calculating Relative Risk provide additional information and can be located in the WFDSS online help available at https://wfdss.usgs.gov/wfdss_help/index.htm.

**Organization Assessment**

The Organization Assessment (OA) is required to publish a Decision for an incident. It guides Agency Administrators in their incident management organization selection, both in escalating and moderating situations (i.e., this process can be used to expand or contract organizations). The OA is based on Relative Risk, implementation difficulty, and socio-political concerns. The final part of the OA combines these variables to allow users to select the level of incident management needed. The help topics Organization Assessment Reference provides additional information and can be located in the WFDSS online help at https://wfdss.usgs.gov/wfdss_help/index.htm.

**Incident KMZ (left menu)**

Incident KMZ files can be downloaded to include all of the incident spatial data and completed analyses from the Published Decision(s). The spatial data is composed of incident and analysis shapes found in the Incident and Analysis map layers on the Situation map. Shapes include planning areas, fire perimeters, management action points, incident objective shapes, analysis outputs and analysis ignition files. If a decision is pending, only spatial information available to all users will be provided in the KMZ.

**WFDSS Suggested Refresher and Preseason Items**

It’s recommended that units provide annual WFDSS refreshers to all individuals that may be involved in incident decision-making and documentation. It’s also important to identify individuals assigned the Fire Behavior Specialist role in WFDSS to understand a unit’s capacity for providing analysis products, and to identify future analysts for training and exposure come fire season.
WFDSS Refresher Training Recommendations are located in the Line Officer Resources section of the WFM RD&A web page (https://wfmrda.nwcg.gov/line_officer_resources.php). Additional refresher information can be found on the WFDSS home page (Training and Related References menu options, annual refresher documents in Hot Picks) and from GAEs. Suggested minimum duration for review is two hours.

It is suggested that the following items are covered in annual WFDSS refreshers:

- **Strategic Objectives and Requirements** – briefly review what is currently pre-loaded in WFDSS, discuss if there is conflicting information within the same Strategic Objective (SO) or FMU, and evaluate what fire management options can be utilized within each SO/FMU. Determine if edits are needed to update the information currently in WFDSS.

- **Relative Risk** – can be visited pre-season to define some local inputs.

- **Boundary Fires** – discuss, with interagency partners, how fires will be managed along boundaries. Utilize a fire scenario for this discussion if possible and work through the WFDSS process.

- **Unit Fire Planning** – review planning-related shapes associated to ensure they are still applicable and to identify potential needs for one or more Other Unit Shapes.

- **Fire Scenario** – utilize WFDSS Training to develop one or more fire scenarios and guide corresponding discussions. Utilize a fire scenario that is somewhat complex and includes interagency partners.
  - Planning Area – draw a planning area with dialogue around how to draw it and what to include within it.
  - Values Inventory – review the values inventory that’s derived from drawing the planning area. Document missing values, if any, and determine if shapes are available to represent them.
  - Situation Map/Tab – review available map layers and the data they contain, and check system preferences to ensure that all applicable map layers are available for viewing.
  - Relative Risk and Organizational Assessment – complete this process making notes of what various elements were rated and why.
  - Incident Objectives / Incident Requirements – write them for the scenario. Review to ensure they address the what, when, where and why to communicate leader’s intent and indicate priority.
  - Course of Action – develop a course of action that further explains leader’s intent, the priorities for the incident, and as needed, what not to do.
  - Scenarios – as the above information is developed, discuss the potential scenarios and document those actions not taken in the assessment or rationale.
  - Rationale – draft the rationale to include “My decision is…” information. This is the executive summary of the document. Consider documenting what is allowed in the management plan, the probability

Appendix N-6

Release Date: January 2020
of being successful, the expected duration, and what was considered but rejected. The Rationale section provides a list of items to consider addressing and discussing.

○ If interagency partners are not involved in the scenario, discuss who, when and how they would have been involved during an incident.

• *Fire Behavior Models*
  ○ Discuss the various models (FSPro, NTFB, STFB, Basic) and how any of them might be utilized to inform decision content.
  ○ Review the values at risk information provided by the models and how it varies from the values inventory.
  ○ Discuss how the models might be utilized to answer what types of questions (practice forming the questions first, and then determining which modeling tool would provide the best answer).
  ○ Review products previously utilized by the Unit to evaluate risk on a fire or assist with decision-making.
Risk Management

Identify Hazards (Situation Awareness)
- Gather Information
  - Objective(s)
  - Communication
  - Who’s in Charge
- Scout the Fire

Assess Hazards
- Estimate Potential Fire Behavior Hazards
  - Look Up/Down/Around Indicators
- Identify Tactical Hazards
  - Watch Outs
  - As conditions change, what other safety hazards are likely to exist?
  - Consider probability versus severity?

Develop Controls and Make Risk Decisions
- Develop control measures that reduce risk:
  - Firefighting Orders ➔ LCES
    - Anchor Point
    - Downhill Checklist (if applicable)
  - What other controls are necessary?
    - Engineering/Administrative
    - PPE
    - Educational
    - Avoidance
- Emergency Medevac Procedures/Plan
- Are controls in place to mitigate risk?
  - NO - Reassess situation
  - YES - Next question
- Are selected tactics based on expected fire behavior?
  - NO - Reassess situation
  - YES - Next question
- Have instructions been given and understood?
  - NO - Reassess situation
  - YES - Next question
- Consider risk versus gain

Implement Controls
- Ensure controls are in place and being implemented by personnel.
- Ensure controls are integrated operational plan and understood at all levels.

Supervise and Evaluate
- Are controls adequately mitigating the hazards?
  - NO – Reassess and consider:
    - Human Factors:
      - Low experience level?
      - Distracted from primary tasks?
      - Fatigue or stress reaction?
      - Unsafe attitude?
    - The Situation:
      - What is changing?
      - Are strategy and tactics working?

If situation changes significantly, restart Risk Management Process at the appropriate step.
Standard Firefighting Orders

1. Keep informed on fire weather conditions and forecasts.
2. Know what your fire is doing at all times.
3. Base all actions on current and expected behavior of the fire.
4. Identify escape routes and safety zones and make them known.
5. Post lookouts when there is possible danger.
7. Maintain prompt communications with your forces, your supervisor and adjoining forces.
8. Give clear instructions and insure they are understood.
9. Maintain control of your forces at all times.
10. Fight fire aggressively, having provided for safety first.

Watch Out Situations

1. Fire not scouted and sized up.
2. In country not seen in daylight.
3. Safety zones and escape routes not identified.
4. Unfamiliar with weather and local factors influencing fire behavior.
5. Uninformed on strategy, tactics, and hazards.
6. Instructions and assignments not clear.
7. No communication link with crew members/supervisor.
8. Constructing fireline without safe anchor point.
9. Building fireline downhill with fire below.
10. Attempting frontal assault on fire.
11. Unburned fuel between you and fire.
12. Cannot see main fire, not in contact with anyone who can.
13. On a hillside where rolling material can ignite fuel below.
14. Weather is getting hotter and drier.
15. Wind increases and/or changes direction.
17. Terrain and fuels make escape to safety zones difficult.
18. Taking nap near fireline.
