Description:

Preliminary Priority Habitat (PPH):
Areas offering the highest quality sage-grouse habitat, based upon bird density, lek location, community composition, intactness, or other variables. As such, these polygons should be the highest priorities for conservation and protection during fire operations and fuels management decision making. PPH will be viewed as more valuable than PGH when priorities are established.

Preliminary General Habitat (PGH):
Areas of relatively intact sagebrush communities which provide certain habitat requirements for sage-grouse. When suppression resources are widely available, maximum efforts should be placed on limiting fire growth in these polygons.

Nevada & California Greater Sage-Grouse Habitat
