Description:

Preliminary Priority Habitat (PPH) and Preliminary General Habitat (PGH): Habitat designations developed by BLM and state agency biologists for all populations of GRSG (except the Bi-State and Columbia populations) which have been widely used since 2012. PPH is a higher value to protect, conserve and restore than PGH, and PGH is higher than other sagebrush vegetation.

PPH: Areas offering the highest quality GRSG habitat based upon bird density, lek location, community composition, intactness, or other variables.

PGH: Areas of relatively intact sagebrush communities which provide certain habitat requirements for GRSG.

Idaho Greater Sage-Grouse Habitat 2012 - 2015
