Cumulative acres showing in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

A cold front will move through the northern and central Plains, bringing warmer temperatures to the southern Plains due to southerly winds. Winds will increase to 15-25 mph across the Central Plains, with stronger gusts in Colorado and New Mexico. Humidity will drop to 20-30%. Texas will remain warm and dry with humidity at 10-20% and similar wind speeds.

High pressure in the southeastern U.S. will keep Florida dry, with humidity at 20-30% and light winds. Stronger winds of 20-25 mph will occur in the southern Appalachians, with low humidity. New England will experience breezy conditions with higher humidity and showers.

Arizona and southern California will be dry with lighter winds, while northern California, the Pacific Northwest, and the Great Basin will see unsettled weather with showers and higher humidity. The Northern Rockies, western Wyoming, and Colorado will also experience showers and humidity, with winds expected to reach 25-40 mph. Alaska will see an increase in shower activity while Hawaii continues to see breezy conditions due to the presence of trade winds.
