

**National Interagency Coordination Center
Incident Management Situation Report
Friday, December 14, 2018 – 0800 MT
National Preparedness Level 1**

National Fire Activity

Initial Attack Activity:	Light (64) new fires
New large incidents:	1
Large fires contained:	0
Uncontained large fires:**	1
Area Command teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0

**Uncontained large fires include only fires being managed under a full suppression strategy.

***Additional wildfire information is available through the Geographic Areas at <http://gacc.nifc.gov/>

Predictive Service Discussion: More valley rain and mountain snow is expected across the northwestern quarter of the country Friday as another weakening cold front moves east along the Canadian Border. To the south, across the Southwest, warm and dry conditions Friday will give way to a cooler and breezy southwesterly flow over the weekend. In the Southeast a strong, wet system will move northeast into the Mid-Atlantic region by Sunday spreading moderate to heavy rainfall. Windy conditions are expected across the northern Great Plains Saturday followed by a warm up that will allow for unseasonably warm conditions to develop as far north as the Dakotas. Cooler and windy conditions will return by Mid-week as an Alberta Clipper moves southeast from Canada toward the Great Lakes. While this is occurring, high pressure will redevelop over the west producing warm and dry conditions in the mountains and strong inversions in the lower elevations.

Serious Injury Procedures

Firefighter Health & First Aid

Dealing with serious injuries on the fireline can add even more stress to our hectic work environment. In the event a fireline accident occurs, adherence to the following principles is important to insure an adequate and appropriate response is made.

- Before entering the scene, determine whether it is safe to approach. Look for hazards as well as what may have happened. It may be necessary to move the patient or to make the area safe before doing an assessment.
- Provide first aid and assess the extent of the injuries.
- Make contact with your supervisor. Depending on the complexity of the fire, that could be your crew boss, the Division Supervisor, the IC, or even dispatch. If your fire has a medical plan, follow the plan.
- Provide them with accurate, concise information on the following
 - Number of people injured
 - Type of injuries
 - Severity of injuries (light, moderate, severe, life threatening)
 - Mechanism of injury
 - Vital signs (pulse, respirations, level of consciousness, etc)
- Determine the best method of evacuation. Depending on the severity of injury or availability of resources, this decision may already be made for you.
- Keep the radio frequency clear of non-emergency traffic, provide updates of the patient's condition and await instructions.
- If evacuation is by helicopter, it may be necessary to construct a helispot. Document treatment provided in case it is necessary to send the information along with the patient in the aircraft.
- If the patient needs to be carried to a road, insure enough people are available to work in relays.
- Once the patient is clear, take a moment to write down witness statements, clean up notes and timelines, and document any other pertinent information.
