

**National Interagency Coordination Center
Incident Management Situation Report
Friday, January 19, 2018 – 0800 MT
National Preparedness Level 1**

National Fire Activity

Initial attack activity: Light (174) new fires
 New large incidents: 0
 Large fires contained: 1
 Uncontained large fires:** 0
 Area Command teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 1
 Type 2 IMTs committed: 0

**Uncontained large fires include only fires being managed under a full suppression strategy.

Predictive Services Discussion: A cold trough of low pressure will move into the West from the Pacific Ocean on Friday bringing light to moderate snow to the mountains from central California north to the Canadian border. As the trough moves inland on Saturday, it will intensify over the southwestern states. Breezy conditions and downslope flow will develop across New Mexico and Colorado which could create critical fire weather conditions. By Sunday, the strengthening storm will move into the Great Plains. Significantly impactful snow will be possible from the Upper Peninsula in Michigan southwest into eastern Nebraska. Meanwhile, another wintery system will move into the Pacific Northwest, Northern Rockies and the northern Great Basin bringing much needed snowfall. Further south, critical fire weather conditions will continue from Roswell, New Mexico south to Big Bend, Texas with breezy northwesterly winds and low humidities. Weather across the West will begin to settle down on Monday and Tuesday as the exiting system weakens. In the East, the winter storm will move into the Great Lakes region on Monday and toward the East Coast on Tuesday creating travel issues. A quieter westerly flow will develop over the country on Wednesday and Thursday; however, more snow will be possible across the northwestern quarter of the nation. A slightly breezy downsloping flow along the Rocky Mountain Front may lead to pockets of critical fire weather conditions on Thursday.

In Alaska, a cold front will move into the Interior from the Arctic Ocean and stall. Temperatures will trend toward below normal and where they will remain. Little, if any snowfall is expected with the front though some areas along the southern coast could begin to see some snowfall on the Chugach Mountains by Monday night. The low pressure area associated with this system will gradually drift south from the Arctic Ocean north of Prudhoe Bay and park itself over the Brooks Range.

Constructing Line Without A Safe Anchor Point

Operational Engagement

When deciding where to build fireline, the following considerations must be weighed:

- Can you hold the line without the fire hooking under/around you? How do you protect against losing the line and ensure your safety if there is a danger of the fire hooking around you?
- Are there adequate safety zones and escape routes? Review what constitutes an adequate safety zone and escape route. Who has the responsibility to designate them and continue to make sure they are adequate?
- Can you develop your starting point into an anchor point? List some good anchor points. Describe how you would develop your starting point into an anchor point.
- Have you posted good lookouts? Where should the lookout(s) be posted? Who can be a lookout?
- Do you have good communications? Who do you need to be in contact with? If the communications are not good, what can you do to improve them?
- To reduce the risks, start the line in another location. Talk about fires where you have had to relocate the line because your anchor point did not hold the fire.
- Do you have a lookout posted? Can they see the main fire?
- How have you mitigated Watchout Situation #8?
