

**National Interagency Coordination Center
Incident Management Situation Report
Wednesday, June 20, 2018 – 0530 MT
National Preparedness Level 2**

National Fire Activity

Initial Attack Activity: Light (81) new fires
 New large incidents: 2
 Large fires contained: 3
 Uncontained large fires:** 10
 NIMOs committed: 1
 Type 1 IMTs committed: 1
 Type 2 IMTs committed: 2

Nationally, there are 29 large fires being managed under a strategy other than full suppression.

**Uncontained large fires include only fires being managed under a full suppression strategy.

Predictive Services Discussion: The weakening upper level low pressure area over the Northern Rockies will move into the central Great Plains by afternoon as a strengthening ridge of high pressure along the coast of Southern California and Baja California moves on shore and produces a pronounced warming effect on temperatures across the western states. While the West dries out and warms, the Great Plains will see stormy conditions across its midsection. The East will remain mostly dry except across the Ohio River Valley and Virginia where a stalled front allows for convection to continue. In Alaska, a strengthening ridge of high pressure will lead to continued warming across the Interior along with the reemergence of convection across the Upper Yukon and also out near Galena. Expect above normal temperatures and low afternoon humidities.

FireFit

*"Fitness can neither be bought nor bestowed,
like honor it must be earned"*

Firefighter Health & First Aid

- The FireFit program was created with the intent of providing the interagency wildland fire community with a comprehensive, easy-to-follow, fitness program with the ultimate goal of improving firefighter safety and health and reducing injuries. This program provides a basic format for a well-balanced fitness program that can be augmented as local units see fit. Program success will rely on management support at every level as well as individual's motivation and participation.
- Fitness is defined as, "the body's ability to perform physical activity without distress or injury." Although most people rarely engage in arduous physical activity as part of their daily jobs, wildland firefighters know that physical fitness plays an important role in our personal wellness and job performance. It's a proven fact that by incorporating a balanced fitness program into our daily work life, we enhance our health and safety, while mitigating our risk of injury and illness and increasing our ability to do work.
- The following checklist will help to guide you in preparation for all levels of fitness activities:
 - Consult with your physician
 - Establish goals
 - Make the commitment to yourself and your crew
 - Get educated – the more you know, the healthier and safer you will be
 - Have the appropriate footwear and clothing for exercise
 - Adhere to your agency procedures for fitness and medical clearance
- In order to implement a balanced fitness program, it's important to include all of the essential components of fitness. When developing a fitness program, it's good practice to incorporate the F.I.T. Prescription = Frequency, Intensity, and Time. Utilizing the F.I.T. Prescription allows you to exercise safely while achieving steady improvements.

In his book, "[Fitness and Work Capacity, 2nd Edition](#)," Dr. Brian Sharkey has developed an Aerobics Fitness Index (page 9) that provides a good calculation for determining your level of aerobic fitness which is based on your level of physical activity.

- Click on [Fire Season Exercises](#) to complement and enhance your current fitness program and go to the [FireFit](#) homepage for many more ideas.
