National Fire Activity
Initial attack activity: Light (142 new fires)
New large incidents: 5
Large fires contained: 4
Uncontained large fires:*** 15
Area Command teams committed: 0
NIMOs committed: 1
Type 1 IMTs committed: 1
Type 2 IMTs committed: 4

Nationally, there are 44 large fires being managed under a strategy other than full suppression.
*** Uncontained large fires include only fires being managed under a full suppression strategy.

**Predictive Services Discussion:** The low-pressure area and surface cold front over the Upper Midwest will continue to move slowly east allowing scattered storms to move toward the Upper Mississippi River Basin. To the West, high pressure will amplify along and east of the Continental Divide and will lead to a warming and drying trend. Another strong low-pressure area along the coasts of Oregon and Washington will create breezy to windy conditions across northern California and Eastern Oregon as a southwesterly flow intensifies. Widespread wetting rainfall is expected across most of Washington except for the southeastern corner; and Oregon along and west of the Cascade Crest. Wind flow across the remainder of California will be onshore and from the southwest. Texas will return to overall hot and dry conditions as high-pressure sits overtop the state.

Norovirus causes sudden vomiting and diarrhea and feeling extremely ill. It is highly contagious and can spread rapidly through a crew or fire camp by exposure to stool and vomit of sick people. Food, drink, and objects can be contaminated even if you don’t see anything on them. Sick people are contagious for 3 days after recovery, possibly longer.

Symptoms of Norovirus infection usually last about 2–3 days and include:
- Diarrhea
- Vomiting
- Stomach pain
- Dehydration due to excessive vomiting and diarrhea

Treatment:
- There is no drug for treating Norovirus and antibiotics don’t help
- Drinking plenty of fluids with electrolytes
- In some cases, fluid may need to be given intravenously

If you have symptoms, take these steps to prevent spread:
- Wash your hands thoroughly with soap and water after using the toilet
  - If soap and water aren’t available, use a hand sanitizer that contains at least 62% ethanol
- Do not prepare food for others while you are sick and for 3 days after you recover
- Clean and disinfect surfaces with a bleach-based cleaning solution immediately after they have been contaminated by vomit or diarrhea
- Wash soiled laundry thoroughly
  - Wear disposable gloves if possible and wash your hands after handling
  - Immediately remove items that may be contaminated, place in a plastic bag, and machine wash with detergent on the longest cycle and machine dry
  - Handle soiled items gently to avoid spreading the virus

Precautions:
- Wash your hands with soap and water before eating, drinking, or smoking
- Don’t touch your mouth or food after touching anything that might be contaminated
- Wear disposable gloves when taking care of a sick buddy
