

INCIDENT MANAGEMENT SITUATION REPORT
FRIDAY, DECEMBER 8, 2000 - 1000 MST
NATIONAL PREPAREDNESS LEVEL I

CURRENT SITUATION:

No new large fires were reported for the past week. Initial attack activity was light in most Geographical Areas with the Southern Area reporting the most. No units are currently reporting very high or extreme fire danger levels.

OUTLOOK:

A slow moving low pressure system off the Southern California coast will move onshore today bringing a chance of showers across Southern California to northwestern New Mexico. High pressure over the Rocky Mountains will bring clear skies to most of the Pacific Northwest. High temperatures should be in the 40 s over the Pacific Northwest and mostly 60 s to 70 s in the Southwest.

A ridge of high pressure will move over the Midwest following a low pressure system that brought snow to the upper Midwest yesterday. Partly cloudy skies will remain over the southern portions of the Midwest through the day due to another low pressure system arriving over Louisiana by this afternoon. Temperatures are expected to range from the upper 40 s to the lower 60 s.

The Southern Area should have cloudy skies with the cold front that is associated with a low pressure system that is approaching the Northeast. Most of the precipitation will remain in the far northern portion of the region, except for southern Florida, which should experience some showers. Daytime highs will range from the 50 s and 60 s, except southern Florida, which will have highs in the 70 s and 80 s.

Cold daytime high temperatures and snowfall is expected across most of the Northeast. Accumulations of snow will be one to three inches across the region. High temperatures are only expected to be in the 20 s in the upper portion of the area, and 40 s in the Virginia's.
