

INCIDENT MANAGEMENT SITUATION REPORT
 SUNDAY, OCTOBER 8, 2000 - 0900 MDT
 NATIONAL PREPAREDNESS LEVEL II

CURRENT SITUATION:

Initial attack activity was minimal throughout most of the United States, with some increase in activity in the Eastern Great Basin and Northern California areas. One new large fire was reported in the Northern California Area. Very high to extreme fire indices were reported in Oregon, California, Idaho, Utah, Arizona, Kansas, and Nebraska.

NORTHERN CALIFORNIA AREA LARGE FIRES:

JOURNEY, Six Rivers National Forest. This fire is located near Ruth Lake in Trinity County, California. The cause of the fire is under investigation. Steep terrain, winds, and low relative humidity are causing control problems. Current threats are to structures and timber resources.

JOURNEY	CA	SRF	475	0	UNK	330	12	7	3	0	NR	NR

EASTERN GREAT BASIN AREA LARGE FIRES:

CLEAR CREEK COMPLEX, Salmon-Challis National Forest. This complex, consisting of the Clear Creek and Marlin Springs fires, is 12 miles west of Salmon, ID. Rehabilitation efforts are continuing.

OUTLOOK:

*** A RED FLAG WARNING IS POSTED FOR NORTHWEST ALABAMA FOR STRONG WINDS ***

*** A RED FLAG WARNING IS POSTED FOR THE PANHANDLE OF FLORIDA FOR STRONG WINDS AND LOW RELATIVE HUMIDITIES ***

*** A RED FLAG WARNING IS POSTED FOR ALL OF MISSISSIPPI FOR LOW FUEL MOISTURE AND LOW RELATIVE HUMIDITIES ***

A weak low pressure offshore will keep the coastal areas of California and Southern Oregon under fog. Otherwise a ridge over the western states will slowly shift eastward as a weakening cold front moves into the Pacific Northwest into Canada. High temperatures will be in the 60's to 70's along the coast, 70's and 80's inland and in the 90's to lower 100's in the desert areas and lowest valleys. Winds will be northeast to southeast at 10 to 15 mph across southern Oregon and northern California. South to southwest or onshore winds at 5 to 15 mph elsewhere. Minimum relative humidity will range 10 to 20 percent in the driest areas, 15 to 35 percent inland and higher along and near the coast.

Texas and Oklahoma will have high pressure at the surface associated with a cold trough aloft that will keep temperatures cool. Moisture from the Gulf of Mexico will ride over the cold air at the surface helping to bring a slight chance of rain or snow showers across portions of west and central Texas. There will be widespread showers across far south Texas. High temperatures will be in the 40's across north and west Texas and Oklahoma, and in the 50's to 60's east. Winds will be north to northeast at 15 to 25 mph. Minimum relative humidity will range 30 to 40 percent in north and central Texas and Oklahoma, and 60 to 80 percent to the south and west.
