

**INCIDENT MANAGEMENT SITUATION REPORT
FRIDAY, NOVEMBER 08, 2002 1000 MST
NATIONAL PREPAREDNESS LEVEL 1**

CURRENT SITUATION:

Initial attack activity was light across the nation. Nationally, 265 new fires were reported for the week ending November 7th. One large fire was reported in the Northwest Area. Very high to extreme fire indices were reported in Arizona and California.

NORTHWEST AREA LARGE FIRES:

TROUT FARM, Malheur National Forest. This fire is 12 miles southeast of Prairie City, Oregon, burning in logging slash and timber. Crews are using direct attack methods, depending on the weather. The fire has received precipitation.

INCIDENT NAME	ST	UNIT	SIZE	% CTN	EST CTN	TOTL PERS	CRW	ENG	HELI	STRC LOST	\$\$\$ CTD
TROUT FARM	OR	MAF	240	0	UNK	53	2	4	0	0	NR

OUTLOOK:

The Northwest is expecting rain, with snow at the higher elevations. Low temperatures will be in the mid 20s to mid 30s, high temperatures will range from the mid 40s to mid 50s in the valleys and mid 30s to mid 40s in the mountains.

SMOKE EXPOSURE

Exposure to smoke during fire operations can be a significant safety concern. Research has shown that smoke exposure on prescribed fires, especially in the holding and ignition positions, often exceeds that on wildfires. There are many precautions that can be taken to reduce personnel exposure to smoke.

● Planning: Smoke exposure needs to be considered when planning suppression tactics and prescribed fires. Simple actions can mitigate smoke exposures, such as:

- Altering line locations can have a significant impact on smoke exposure.
- Placing firelines in areas of lighter fuels or moving lines to roads or other barriers that will require less holding, patrol and mopup will significantly reduce the smoke exposure to personnel.
- Use flanking attack as opposed to head attack (where appropriate) in heavy smoke situations.
- Check fire behavior forecasts for smoke and inversion potential.
- In heavy smoke, give up acres to gain control.

● Implementation: Many techniques can help reduce the exposure of personnel to heavy smoke, such as:

- Rotating people out of the heaviest smoke area may be the single most effective method.
- Locate camps and incident command posts in areas that are not prone to inversions.
- Minimize snag falling, consistent with safety concerns, to avoid putting heavy fuels on the ground that will require mopup.
- Changing firing patterns and preburning (black lining) during less severe conditions can greatly reduce exposure to smoke.
- The use of retardant, foam or sprinklers can also significantly reduce the workload and exposure time for holding crews.
