

**INCIDENT MANAGEMENT SITUATION REPORT
WEDNESDAY, MARCH 5, 2003 1000 MST
NATIONAL PREPAREDNESS LEVEL 2**

CURRENT SITUATION:

Initial attack activity was light nationally, with 10 new fires reported.

COLUMBIA RESPONSE, Federal Emergency Management Agency. A FEMA Emergency Operations Center has been established in Lufkin, Texas. Three Type 1 Incident Management Teams (Lohrey, Martin and McCombs) are assigned in Corsicana, Hemphill and Palestine, Texas. Two Type 2 Incident Management Teams (Custer, Hildreth) are assigned in Nacogdoches and Longview, Texas. Forty-eight agencies are cooperating in the search and collection of shuttle materials.

NEWCASTLE, Animal and Plant Health Inspection Service, USDA. State and Federal personnel have been mobilized in response to the outbreak of the Exotic Newcastle Disease. A Type 1 Incident Management Team (Corley) is working in support of the USDA APHIS operation under a Unified Command. Support operations are being conducted in Arizona, California, Maryland and Nevada.

OUTLOOK:

***** A RED FLAG WARNING IS IN EFFECT FOR SOUTHEAST NEW MEXICO AND SOUTHWEST TEXAS FOR HIGH WINDS AND LOW RELATIVE HUMIDITIES*****

A strong cold front will move across north Texas early on Wednesday. Winds will be from the north with cloudy skies and much cooler temperatures can be expected. Temperatures will warm into the 60 s by Thursday and Friday.

FREQUENT SPOT FIRES ACROSS THE LINE

There are few lookout situations that state more clearly how much potential your fire has for rapid, uncontrolled growth. Consider the following questions if you are getting spot fires across your line:

- Can you handle increased spotting? List some ways you can keep ahead of spot fires (gridding the green, lookouts, etc.)
- Do you have a plan for long-range spotting? In what fuel type and under what conditions will you likely have long-range spotting? What types of plans can you think of for handling long-range spotting?
- Is help available if necessary? What kinds of resources will you have in place or order to handle spot fires?
- If fire behavior increases, is your position still defensible? Discuss what type of action you might take if a spot fire takes off.
- Do you have more than one safety zone in case one gets cut off? Describe how you might have multiple safety zones.
- Do the primary lookouts have a good view of the situation? Discuss who might be acting as a lookout (e.g., crew member, air resources, etc.) and how you will get good information from that person. (Are you relying on an air attack who is busy with airtankers?)
- Is the primary burning period ending? Talk about how your tactics may vary from finding spot fires early in the day to later into the evening. Review Probability of Ignition (PIG) and what it can tell you about spotting potential.
- To reduce the risk, be ready to retreat. Keep your guard up even if spotting has not occurred for a few hours. Review fires where you have had frequent spot fires and what you learned about controlling them.
