

**INCIDENT MANAGEMENT SITUATION REPORT**  
**FRIDAY, MARCH 7, 2003 1000 MST**  
**NATIONAL PREPAREDNESS LEVEL 2**

**CURRENT SITUATION:**

Initial attack activity was light nationally, with 40 new fires reported. One large fire was reported and contained in the Eastern Area. Very high fire indices were reported in California.

COLUMBIA RESPONSE, Federal Emergency Management Agency. A FEMA Emergency Operations Center has been established in Lufkin, Texas. Three Type 1 Incident Management Teams (Lohrey, Martin and McCombs) are assigned in Corsicana, Hemphill and Palestine, Texas. Two Type 2 Incident Management Teams (Custer, Hildreth) are assigned in Nacogdoches and Longview, Texas. Forty-eight agencies are cooperating with the search and collection of shuttle materials.

NEWCASTLE, Animal and Plant Health Inspection Service, USDA. State and Federal personnel have been mobilized in response to the outbreak of the Exotic Newcastle Disease. Two Type 1 Incident Management Teams (Corley and Raley) are working in support of the USDA APHIS operations. Support operations are being conducted in Arizona, California, Maryland and Nevada.

**EASTERN AREA LARGE FIRES:**

Savanna Lake	MD	MDS	835	100	---		0	0	0	0	NR

MDS = Maryland State Forestry

**OUTLOOK:**

Warm and dry weather will continue for the next couple of days in Texas. A weak cold front will move into the region Saturday night cooling temperatures slightly. There will be a slight chance of rain Sunday night through Wednesday as a series of upper level disturbances move across the region.

A weak ridge of high pressure will bring a little warmer and drier weather to southern California with light westerly winds. High temperatures will range from the 50 s to the 60 s in the mountains and upper deserts and 60 s to 70 s in the valleys and lower desert.

### **RETARDANT DROP SAFETY**

Having retardant dropped on a fire should be a routine event. However, there are risks associated with retardant drops that can pose serious threats to personnel and equipment. Consider the following for all drops:

- Be aware of the location of lead planes and airtankers during retardant drop operations.
- Be sure you have positive contact with the lead plane or airtanker before the drop.
- Personnel can be injured by the impact of retardant drops. Clear personnel out of the target area when the drop is conducted. If an individual is unable to retreat to a safe place, the best method for minimizing injury from the drop is to:
  - Hold your handtool away from your body.
  - Lie face down with hardhat in place and head toward the oncoming aircraft.
  - Grasp something firm to prevent being carried or rolled about by the retardant.
  - Do not run unless escape is ensured.
  - Get clear of dead snags and tops.
  - Be aware of rolling debris below the drop site in steep terrain.
- Working in an area covered by retardant should be done with caution due to slippery surfaces.
- If possible, wash the retardant off your skin to prevent irritation.
