OUTLOOK:

Fire Weather Watches: As of Midnight Sunday morning a Fire Weather Watch had been posted for the northern third of the Lower Peninsula of Michigan for low humidity and brisk southeast winds during the afternoon.

Weather Discussion: Storm system moving into the central states with another storm moving into the Pacific Northwest. Ahead of these systems, look for dry gusty winds over New Mexico and Texas as well as the eastern portions of the Great Lakes area. Some rain is expected over the mid Atlantic coast states as well as Florida. In Alaska, high pressure in the north will continue to bring a dry east flow to the interior while low pressure over the south should spread some moisture to the coastal areas.

Geographic Area Weather	High Temperatures	Minimum Relative Humidity	Wind
EASTERN AREA Becoming partly cloudy across the eastern half of the Great Lakes. Showers and thunderstorms likely across much of the western Great Lakes and northern Big Rivers compacts	60 to 70 over the UP and LP of MI, NE WI	15 to 25% across the UP and northern LP of MI, 25 to 35% over NE WI and the southern LP of MI	Southeast wind increasing to 15 to 25 mph across the northern and eastern Great Lakes
