## OUTLOOK:

**Weather Discussion:** Moist westerly flow has set up over the Pacific Northwest. This flow extends inland across western portions of the Northern Rockies as well. As a result, showers are expected again today over coastal Washington and in the northern Washington Cascades. Very west is expected to be dry with seasonal temperatures.

## ***SPOT WEATHER FORECAST***

Spot weather forecasts should be requested for those fires that have potential for extreme fire behavior, exceed initial attack, or are located in areas where Red Flag Warnings have been issued.

● Basic elements needed for a spot weather forecast include:

- Name of fire and management agency
- Request time and date
- Location by ¼ section
- Drainage name
- Exposure
- Size
- Elevation (top and bottom)
- Fuel type
- Fire character (ground, crown, etc.)
- Weather conditions (place, elevation, observation time, wind direction, wind velocity, dry bulb, wet bulb, remarks)
