

INCIDENT MANAGEMENT SITUATION REPORT
FRIDAY MAY 7, 2004 0530 MDT
NATIONAL PREPAREDNESS LEVEL 1

CURRENT SITUATION:

Initial attack activity was light nationally with 108 new fires reported. Two large fires were contained, one each in the Southwest and Eastern Great Basin Areas. Very high to extreme fire indices were reported in Arizona, California, Colorado, Kansas, Minnesota, Utah, South Dakota and Wyoming.

SOUTHERN CALIFORNIA AREA LARGE FIRES:

CACHUMA, Los Padres National Forest. A Type 2 Incident Management Team (Smith) is assigned. This fire is in chaparral, 15 miles northeast of Santa Ynez, CA. Minimal fire activity was observed. Steep, rugged terrain is hampering containment efforts.

EAGLE, Riverside Unit, California Department of Forestry & Fire Protection (CDF). A CDF Type 1 Incident Management Team (Henson) is assigned. This fire is in brush, five miles southeast of Temecula, CA. Some interior islands continue to burn, otherwise there was minimal fire activity.

CERRITOS, Riverside Unit, California Department of Forestry & Fire Protection (CDF). A CDF Type 1 Incident Management Team (Anderson) is assigned. This fire is in grass and brush, eight miles southeast of Corona, CA. Lower temperatures, higher relative humidity and decreased wind are aiding containment efforts.

INCIDENT NAME	ST	UNIT	SIZE	% CTN	EST CTN	TOTL PERS	CRW	ENG	HELI	STRC LOST	\$\$\$ CTD

CERRITOS	CA	RRU	16,460	90	5/7	960	16	180	2	24	1.7M

NORTHERN CALIFORNIA AREA LARGE FIRES:

COTTONWOOD, Plumas National Forest. This fire is in timber, 18 miles southeast of Susanville, CA. A Type 2 Incident Management Team (Szczepanik) is assigned. Personnel are securing the fireline and are mopping up.

PARKS	ID	PAF	375	100	---	9	0	2	0	0	NR

PAF = Payette National Forest

OUTLOOK:

Weather Discussion: A slow-moving low pressure trough over the eastern Pacific will be nearing the coast today. The low will keep winds onshore in California, leading to near normal daytime high temperatures and increased relative humidity once again. Some showers are expected tonight along the northwest coast from northern California through the Oregon and Washington Cascades. Much of the interior west and southeast coast states will remain dry.

Geographic Area Weather	High Temperatures	Minimum Relative Humidity	Wind
SOUTHERN CALIFORNIA AREA Morning fog coastal areas, otherwise sunny.	68 to 75 coastal areas. 70 to 85 mountains. 78 to 88 valleys. 85 to 90 upper deserts. 95 to 102 lower deserts.	15 to 30% mountains and deserts.	Southwest 10 to 20 mph.
SOUTHWEST AREA Mostly sunny to partly cloudy, warm to hot, and dry.	60s to 70s mountains. 80s to 90s lower elevations. 95 to 105 Arizona deserts.	5 to 15% most areas. 15 to 25% highest terrain and parts of western Texas.	South to southwest 5 to 20 mph, with gusts to 25 mph western Arizona.
EASTERN GREAT BASIN AREA Idaho, Bridger-Teton: Partly cloudy and warm with lighter winds. Isolated thunderstorms in the mountains. Utah, Arizona Strip: Mostly sunny and very warm with lighter winds. Isolated thunderstorms in the mountains.	Idaho, Bridger-Teton: 55 to 68 mountains, 70 to 82 valleys. Utah and Arizona Strip: 62 to 80 mountains, 76 to 90 valleys.	Idaho, Bridger-Teton: 10 to 20% valleys, 15 to 32% mountains. Utah, Arizona Strip: 4 to 15% valleys, 7 to 20% mountains.	Idaho, Bridger-Teton: West to southwest 5 to 15 mph. Utah, Arizona Strip: Upslope or southwest 5 to 10 mph over eastern Utah. Southwest 10 to 15 mph over western Utah.

WILDLAND/URBAN INTERFACE STRUCTURE PROTECTION

The primary consideration of any operation is to assure firefighter and public safety. It is a must to assess potential fire behavior, ingress/egress routes, nature of the threat, hazardous materials, and available water supplies before engaging in the protection of any structure.

● Factors that may make an attempt to save a structure hopeless or too dangerous include:

- The fire is making a sustained run and there is little or no clearance between the structure and the fuel.
- The fire behavior is extreme; spot fires are numerous and the spread is outpacing containment.
- Water supply will not last as long as the threat of the fire.
- The fire's intensity dictates that you leave the fire area immediately.
- The structure is constructed of wood and has a wood, shake roof.
- The roof of the structure is more than one-quarter involved.
- There is fire inside of the structure or windows are broken and there is no way to quickly repair them.
- You can't safely remain at the structure because your escape route could become unusable.

● When implementing a plan to protect structures, consider the following:

- Don't enter a burning structure unless you are trained, equipped, and authorized. Firefighter safety and survival is the number one priority.
- Always stay mobile and wear all of your PPE.
- Back in equipment to allow for a quick escape.
- Coil a short, 1 ½", charged line with fog nozzle on your engine for safety and quick knock down capability.
- Don't make long hose lays. Keep at least 100 gallons of water reserve in your tank.
- Check the road system before the fire approaches. Know bridge limits, alternate access routes, and turnarounds for your vehicle and other support vehicles.
- Determine if residents are home. Leave on the inside and outside lights, regardless of the time of day. Close the garage door.
- Place the owner's ladder at a corner of the home on the side with the least fire threat.
- Coil and charge garden hoses.
- Check and mark hazmat; e.g., LPG, pesticides, and paint storage.
