## OUTLOOK:

**Fire Weather Watch:** For parts of far northwestern Nevada for winds and low relative humidity.

**Weather Discussion:** High pressure will keep much of the West in clear and warm conditions through the day. Temperatures will again push up well above normal, especially in southern California. Also, the remnants of hurricane Frances will move into the New England States, causing heavy rains. In Alaska, conditions will remain seasonable and dry. Hurricane Ivan will approach the southeast coast of Jamaica overnight tonight.

### **DOWNHILL FIRELINE CONSTRUCTION CHECKLIST**

Downhill fireline construction is hazardous in steep terrain, fast-burning fuels, or rapidly changing weather. Downhill fireline construction should not be attempted unless there is no tactical alternative. When building downhill fireline, the following is required:

- Crew supervisor(s) and fireline overhead will discuss assignments prior to committing crew(s). Responsible overhead individual (TFLD or ICT4 qualified or better) will stay with job until completed.
- Decision will be made after proposed fireline has been scouted by supervisor(s) of involved crew(s).
- LCES will be coordinated for all personnel involved.
  - Crew supervisor(s) is in direct contact with lookout who can see the fire.
  - Communication is established between all crews.
  - Ensure rapid access to safety zone(s) in case fire crosses below crew(s).
- Direct attack will be used whenever possible; if not possible, the fireline should be completed between anchor points before being fired out.
- Fireline will not lie in or adjacent to a chute or chimney.
- Starting point will be anchored for crew(s) building fireline down from the top.
- Bottom of the fire will be monitored; if the potential exists for the fire to spread, action will be taken to secure the fire edge.
