

INCIDENT MANAGEMENT SITUATION REPORT
SATURDAY MAY 7, 2005 0800 MDT
NATIONAL PREPAREDNESS LEVEL 1

CURRENT SITUATION:

Nationally, initial attack activity was light with 128 fires reported. Two new large fires were reported in the Southwest Area. Three large fires were contained, one each in the Eastern, Southern and Southwest Areas. Very high to extreme fire indices were reported in Arizona, Nebraska, Minnesota, and Texas.

EASTERN AREA INCIDENTS/ LARGE FIRES

MISSISSIPPI MEADOWS, Chippewa National Forest. A Type 2 Incident Management Team (Hinds) is assigned. This fire is 22 miles west of Grand Rapids, MN in grass, brush and timber. Creeping and smoldering fire behavior was reported.

INCIDENT NAME	ST	UNIT	SIZE	% CTN	EST CTN	TOTL PERS	CRW	ENG	HELI	STRC LOST	\$\$\$ CTD

RGR = Lower Rio Grande Valley National Wildlife Refuge

OUTLOOK:

Weather Discussion: In Alaska, warmer and drier weather is on tap as high pressure builds over the region. A low pressure system moving out of the Rockies will bring gusty winds from New Mexico and Texas across the Plains and into the western portions of the Great Lakes. Most of the South will be dry with low humidity over the southeast corner of the country.

Geographic Area Weather	High Temperatures	Minimum Relative Humidity	Wind
Southern California Partly cloudy.	50 to 65 mountains. 65 to 75 valleys. 65 to 75 upper deserts. 80 to 90 lower deserts.	40 to 60%.	Southwest to northwest 10 to 20 mph.
Southwest Partly cloudy and a bit cooler. Winds decreasing AZ, but remaining breezy to windy NM and west TX. Isolated showers northern NM mountains.	40s to 60s mountains, 70s and 80s lower elevations.	10 to 25% lower elevations, 25 to 50% mountains.	West to southwest 10 to 15 mph AZ and 15 to 30 mph NM and west TX.

WILDLAND/URBAN INTERFACE STRUCTURE PROTECTION

The primary consideration of any operation is to assure firefighter and public safety. It is a must to assess potential fire behavior, ingress/egress routes, nature of the threat, hazardous materials, and available water supplies before engaging in the protection of any structure.

● Factors that may make an attempt to save a structure hopeless or too dangerous include:

- The fire is making a sustained run and there is little or no clearance between the structure and the fuel.
- The fire behavior is extreme; spot fires are numerous and the spread is outpacing containment.
- Water supply will not last as long as the threat of the fire.
- The fire's intensity dictates that you leave the fire area immediately.
- The structure is constructed of wood and has a wood, shake roof.
- The roof of the structure is more than one-quarter involved.
- There is fire inside of the structure or windows are broken and there is no way to quickly repair them.
- You can't safely remain at the structure because your escape route could become unusable.

● When implementing a plan to protect structures, consider the following:

- Don't enter a burning structure unless you are trained, equipped, and authorized. Firefighter safety and survival is the number one priority.
- Always stay mobile and wear all of your PPE.
- Back in equipment to allow for a quick escape.
- Coil a short, 1 ½", charged line with fog nozzle on your engine for safety and quick knock down capability.
- Don't make long hose lays. Keep at least 100 gallons of water reserve in your tank.
- Check the road system before the fire approaches. Know bridge limits, alternate access routes, and turnarounds for your vehicle and other support vehicles.
- Determine if residents are home. Leave on the inside and outside lights, regardless of the time of day. Close the garage door.
- Place the owner's ladder at a corner of the home on the side with the least fire threat.
- Coil and charge garden hoses.
- Check and mark hazmat; e.g., LPG, pesticides, and paint storage.
