

**INCIDENT MANAGEMENT SITUATION REPORT**  
**WEDNESDAY, JANUARY 25, 2006 0530 MST**  
**NATIONAL PREPAREDNESS LEVEL 2**

**CURRENT SITUATION:**

Initial attack activity was light nationally with 13 new fires reported. One new large fire was reported in the Southern Area. Very high to extreme fire indices were reported in Kansas, Wyoming, Nebraska and South Dakota.

**SOUTHERN AREA INCIDENTS/LARGE FIRES:**

EASTERN OKLAHOMA IA, Oklahoma State. An Oklahoma State Type 2 Incident Management Team (Goeller) is assigned in Shawnee, OK. The Team is assisting local, state, and federal jurisdictions with managing existing fires and initial attack in Oklahoma. Minimal fire activity was reported. Acres, structure losses and costs represent cumulative fire activity to date for the response area.

BOLEY, Okmulgee Field Office, Bureau of Indian Affairs. This fire is two miles southwest of Boley City, OK in grass and timber. Extreme fire behavior and limited access are hampering containment efforts.

NORTH CENTRAL TEXAS IA, Texas Forest Service. A Unified Command between a Florida State Type 2 Incident Management Team (Holman) and a Texas State Type 2 Incident Commander (Hannemann) is in place in Granbury, TX. The Unified Command is assisting local jurisdictions with managing existing fires and initial attack within the 220,000 square mile West Zone fire management response area. One new fire for 51 acres was contained within the management area. Figures in the table represent cumulative fire activity to date for the response area.

EAST TEXAS IA, Texas Forest Service. A Texas State Type 2 Incident Management Team (Rose) is assigned to assist local dispatch zones with managing existing fires and initial attack in east Texas. Figures in the table represent cumulative fire activity to date for the response area. No new information was reported. This will be the last report unless new information is received.

## SOUTHERN CALIFORNIA INCIDENTS/LARGE FIRES:

PLUNGE, San Bernardino National Forest. A Type 2 Incident Management Team (Walker) is assigned. This fire is eight miles northeast of San Bernadino, CA in grass and timber. Minimal fire activity was observed, and all voluntary evacuations have been lifted.

INCIDENT NAME	ST	UNIT	SIZE	% CTN	EST CTN	TOTL PERS	CRW	ENG	HELI	STRC LOST	\$\$\$ CTD	ORIGIN OWN
PLUNGE	CA	BDF	485	40	1/26	522	22	15	1	0	200K	FS

## OUTLOOK:

**Red Flag:** Red Flag Warning for winds and low humidity in southern California.

**Weather Discussion:** A switch to on-shore flow will begin along the California coast as an upper level low pressure system will move across southern California and into Arizona. Dry conditions will spread across Florida and the adjoining southeastern states. Warm and breezy conditions are expected for the southern Plains and Texas.

Geographic Area Weather	High Temperatures	Minimum Relative Humidity	Wind
<b>Southern California</b> Mostly sunny.	40 to 55 mountains. 60 to 74 valleys. 55 to 60 upper deserts. 60 to 70 lower deserts.	10 to 20%.	Variable 5 to 15 mph.

### INITIAL ATTACK FIRE SIZEUP/SAFETY

Having a good sizeup is important in order to give both the Incident Commander (IC) and fire management a good idea of what problems exist and what resources may be needed for effective firefighting.

● Use the following reporting factors for sizeup. Discuss others that may be used.

- Fire name and location
- Terrain (slope, aspect, elevation) and position of fire on the slope
- Size of fire
- Fuel type, anticipated control problems, and spread potential
- Values threatened
- Weather conditions (wind speed and direction)
- Fire behavior
- Resources on the fire and those needed
- Estimated containment and control times
- Cause (known, suspected, under investigation)

● After your initial sizeup of the fire and/or transition from an initial attack IC, answer the following questions. Repeat this analysis whenever there is a change, or predicted change, in conditions on the fire.

- Have you sized up the fire and relayed the information to dispatch?
- Is the observed fire weather consistent with the forecast?
- Can you control the fire with the resources available (on the incident or soon to be on the incident) and under the expected conditions?
- Have you developed a plan to attack the fire (direct or indirect, anchor points, escape routes, head or flank attack, priority areas); and have you communicated this information to all personnel assigned to the incident, including new arrivals?
- Are lookouts in place or can you see all of the fire area?
- Can you communicate with everyone on the fire and with dispatch?
- Are escape routes and safety zones established? If you are using the black, is it completely burned and without a reburn potential?
- Are safety and the standard fire orders being followed?
- Do you have a complete list of what resources have been ordered for the fire?
- Will you control the fire before the next operational period; and if you won't, or the size of the organization exceeds the IC's capability to manage, have you informed the agency Fire Management Officer?
