

**National Interagency Coordination Center
Incident Management Situation Report
Saturday, September 23, 2006 - 0800 MDT
National Preparedness Level 3**

National Fire Activity

Initial attack activity: Light (96 new fires)

New large fires: 2 (*)

Large fires contained: 2

Uncontained large fires: 19

Area Command Teams: 1

Type 1 IMTs committed: 6

Type 2 IMTs committed: 8

Fire Use Teams:

** Uncontained large fires do not include WFU or confine/contain incidents. **

Australia and New Zealand assisting with 63 fire specialists and managers.

Southern California Area (PL 4)

New fires: 2

New large fires: 0

Uncontained large fires: 2

Area Command Teams: 1

Type 1 IMTs committed: 2

Type 2 IMTs committed: 1

Area Command Team (Waterbury) assigned to manage the Day fire.

Day, Los Padres NF. IMT 1 (Pincha-Tulley, Custer, Dietrich). Twenty-two miles northwest of Santa Clarita, CA. Chaparral and timber. Minimal fire activity. Structures, campgrounds, power and gas lines, communication and archeological sites threatened. Structure protection in place and Highway 33 closed.

Sawmill, Inyo NF. Thirty-six miles northwest of Bishop, CA. Chaparral, pinyon pine and juniper. Minimal fire activity.

Predictive Services Discussion

Strong offshore winds will continue in California through Sunday. A high pressure ridge will build over the West through the weekend as showers depart to the east. Strong northeast winds will continue for northern California through Saturday, while strong offshore winds in southern California remain through Sunday with greatest impact over the coastal mountains and inland valleys. The high pressure ridge will stay through much of next week with warm, dry, and less windy conditions for the West.

http://www.nifc.gov/sixminutes/dsp_sixminutes.php

TRANSFER OF COMMAND

Risks to fireline personnel increase significantly during transfer of command periods regardless of the size or complexity of the incident. There is a high potential for fatalities, serious injuries, or incidents with potential during transfer of command periods (some have occurred in the past). Be proactive in mitigating the risks by proper implementation of LCES—Lookout, Communications, Escape Routes, and Safety Zones.

● Factors for increased risks to fireline personnel during transition periods include:

- No, or poor, briefing of incoming personnel
- Lack of fire weather and behavior information, both forecast and observed
- Communications; face-to-face briefings may not be possible and radio frequencies may be overextended and/or changing due to the increased demands on the system.
- Initial attack resources may not have checked-in and the Incident Commander may not be aware of the number, type and location of all resources.
- Location of safety zones and escape routes may not be known and communicated to all resources.

● Mitigation actions to take:

- Lookouts: Post and maintain your own lookouts.
- Communications: Maintain existing communications with your own and adjacent resources, as well as your original supervisor, while you are developing communications with incoming adjacent resources and your new supervisor.
- Escape routes and safety zones: Identify escape routes and assure incoming resources are aware of their locations; be aware that your original escape routes and safety zones may no longer be accessible due to changing fire behavior or your increased distance from them.
