

**National Interagency Coordination Center
Incident Management Situation Report
Friday, December 21, 2007 – 1000 MST
National Preparedness Level 1**

National Fire Activity (Weekly Total)

Initial attack activity: Light (245 new fires)
 New large fires: 1 (*)
 Large fires contained: 1
 Uncontained large fires: 1
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 0
 Type 2 IMTs committed: 0
 Fire Use Teams committed: 0

** Uncontained large fires do not include WFU or confine/contain incidents. **

Southern California Area (PL 3)

New fires: 1
 New large fires: 0
 Uncontained large fires: 1

Jack, Yosemite NP. One mile north of Wawona, CA. Ponderosa pine and mixed conifer. No new information. Last report unless new information is received.

SAFETY ZONES

A safety zone is a location where the threatened firefighter can find adequate refuge from an approaching fire.

● What is the difference between a safety zone and a deployment site?

- The safety zone is the area where a firefighter can survive without using a fire shelter. The deployment site is used when fire conditions are such that escape routes and safety zones have been compromised.

● How do you identify a good safety zone?

- Consider the distance from the escaped fire as well as topography, winds, fire behavior, and fuels in the area.
- The best locations are usually “in the black;” those with a minimum of, or devoid of, ground/aerial vegetation; or large bodies of water.
- Size is sufficient for all present resources with a minimum distance from fire of at least four times the maximum flame length.
- Location is scouted and marked well for visibility at all times.
- Location has been reassessed in relation to line work progress, fatigue, changes in fire behavior, and arrival of additional resources.
