

**National Interagency Coordination Center
Incident Management Situation Report
Friday, February 16, 2007 - 1000 MST
National Preparedness Level 1**

National Fire Activity (Weekly Total)

Initial attack activity: Light (512 new fires)
 New large fires: 3 (*)
 Large fires contained: 2
 Uncontained large fires: 1
 Area Command Teams:
 Type 1 IMTs committed:
 Type 2 IMTs committed:
 Fire Use Teams:

** Uncontained large fires do not include WFU or confine/contain incidents. **

The U.S. has mobilized two 20-person crews and 61 fire specialists and managers to Australia.

Southern Area (PL 1)

New fires: 496
 New large fires: 2
 Uncontained large fires: 1

Sour Orange, Florida Division of Forestry. One mile south of Lakeport, FL. Grass. Minimal activity.

BWR – Chesapeake Marshlands NWR

Predictive Services Discussion

Gusty offshore winds, warm temperatures and low humidities are on tap for Southern California today and Saturday. Cooling and diminishing winds are expected Sunday. Florida and the Southeast should see low humidities and gusty winds through the weekend.

ASH PIT HAZARDS

Ash pits are an inherent and invisible risk to wildland firefighters that can cause severe burns and injuries. Ash pits are created when organic combustibles consume underground and empty space is created that is undetectable from the surface.

● Environmental factors that increase the risk of ash pit formation after a wildfire:

- Extensive root systems of trees and shrubs.
- Deep duff or peat, the organic layer covering mineral soil.
- Landscapes that have once been cultivated or manipulated by heavy equipment ie, old dozer piles, sawmills, timber sale yards or decking areas.
- Small rodent holes that have become filled with decadent combustible debris ie, beaver holes near dams and stream beds, Badger and Coyote dens.
- White ash is sometimes an indicator as are groups of hovering insects.

● Mitigation measures to consider:

- Identification of high risk landscape.
- Identify and flag all hazardous discovered ash pits.
