

**National Interagency Coordination Center
Incident Management Situation Report
Friday, November 2, 2007 – 0530 MDT
National Preparedness Level 1**

National Fire Activity

Initial attack activity:	Light (85 new fires)
New large fires:	0 (*)
Large fires contained:	0
Uncontained large fires:	2
Area Command Teams committed:	1
NIMOs committed:	0
Type 1 IMTs committed:	3
Type 2 IMTs committed:	0
Fire Use Teams committed:	0

** Uncontained large fires do not include WFU or confine/contain incidents. **

Southern California Area (PL 3)

New fires:	4
New large fires:	0
Uncontained large fires:	2
Area Command Teams committed:	1
Type 1 IMTs committed:	3

Area Command Team (Waterbury) is coordinating the management of fires on Monte Vista Unit, CAL FIRE and the Cleveland National Forest.

IMT 1 (Opliger) is assisting FEMA in managing a mobilization center in Chino, CA.

The 153rd Airlift Wing, Cheyenne WY, the 145th Airlift Wing, Charlotte NC, and the 302nd Airlift Wing, Colorado Springs CO, are providing two MAFFS C-130 aircraft each and support personnel to Southern California. The aircraft and personnel are based at Channel Islands Air National Guard Base. The MAFFS are under the command of Colonel Steve Rader of the 153rd Airlift Wing.

Santiago, Orange County FD. Unified Command between IMT 1 (Whitney), CAL FIRE and Orange County. Twelve miles east of Santa Ana, CA. Chaparral and grass. Minimal fire activity. Community of Silverado, CA threatened. Reduction in acreage due to more accurate mapping.

Poomacha, Monte Vista Unit, CAL FIRE. Unified Command between CAL FIRE IMT 1 (Ault) and Forest Service. Seven miles east of Pauma Valley, CA. Timber, chaparral and grass. Actively burning within interior pockets.

Predictive Services Discussion: Southern California will see warm, dry weather Friday with gusty northeast to east winds developing late in the day. On Saturday, winds will increase with lowering humidities. Winds will begin to diminish Sunday but warm, dry weather will continue into Monday. Portions of Georgia and Carolinas will see low humidity today and Saturday.

BUILDING FIRELINE DOWNHILL WITH FIRE BELOW

As a general rule, construct line moving uphill. Many firefighters have lost their lives attacking wildland fires from above. If there is no practical alternative to constructing line downhill, proceed only after weighing the following considerations:

- Has the area been scouted for fire perimeter and behavior? Discuss what you need to know about the fire perimeter and fire behavior before building fireline downhill with fire below.
- Will wind direction be at your back? Will it stay at your back? Talk about how winds can change when you are on a slope (e.g., time of day, upslope and downslope breezes, etc.).
- Is the area free of chimneys and gullies? How would you negotiate your line location if there were chimneys and gullies below where you needed to be working?
- Are there adequate safety zones and escape routes as you progress downhill? How do you maintain adequate safety zones and escape routes as you progress downhill?
- Can you carry your burnout downhill as you go to provide an anchor point and safety zones? Discuss how you decide when to carry the burnout with you or wait until you have tied in down below.
- Have lookouts been posted? What do the lookouts need to be on the watch for?
- Do you have good communications, especially with lookouts and crews working towards you? What are some of the dangers of not communicating with lookouts and crews working towards you? What are the benefits of maintaining good communications?
- Can the line be completed and burned out before the fire reaches the line? Discuss how this would affect where you locate the line.
- Do you have adequate resources to complete the assignment? What additional resources might you need to safely take on an assignment that includes building fireline downhill with fire below?
- Is aerial support available if needed? What benefits can aerial resources provide? What might be an added danger from aerial resources in this type of situation? (Common Denominators)
- Is aerial support available if needed? What benefits can aerial resources provide? What might be an added danger from aerial resources in this type of situation? (Common Denominators)
- Has everyone been briefed on the assignment, fire behavior, weather, communications, escape routes and safety zones, hazards and tactics? Discuss who might provide this briefing and where and when it might occur.
- To reduce the risks:
 - If the answer is “no” to any of these questions, consider other tactics and provide for safety first.
 - Never compromise escape routes to safety zones for the sake of building line. Remind everyone that a situation check is each and every firefighter’s right and responsibility
