

**National Interagency Coordination Center
Incident Management Situation Report
Friday, February 22, 2008 – 1000 MST
National Preparedness Level 1**

National Fire Activity (Weekly Total)

Initial attack activity: Light (531 new fires)
 New large fires: 7 (*)
 Large fires contained: 12
 Uncontained large fires: 3
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 0
 Type 2 IMTs committed: 1
 Fire Use Teams committed: 0

** Uncontained large fires do not include WFU or confine/contain incidents. **

Southern Area (PL 3)

New fires: 517
 New large fires: 7
 Uncontained large fires: 3
 Type 2 IMTs committed: 1

Texas Winter Fires 2008, Texas Forest Service. IMT2 (Hannemann). Multiple Texas counties. IMT managing the Castell and Barnsley fires, and supporting fire suppression operations throughout west Texas.

Barnsley, Texas Forest Service. Started on private land nine miles west of Crane, TX. Brush and grass. Rapid rates of spread. Single residence threatened.

Gum Bay, National Forests in Florida. Six miles northeast of Smith Creek, FL. Southern rough. No new information.

WEA - Wewoka Agency, BIA

NCS – North Carolina DOF
OSA – Osage Agency, BIA
MSS – Mississippi Forestry Commission

FLS – Florida DOF
CHA - Chickasaw Agency, BIA

Predictive Services Discussion: Southeast New Mexico and west Texas will be windy with low humidity and increased fire potential today, Saturday and Monday. The weather should be generally dry in those areas through Thursday. The Southeast will see periods of rain today and Saturday and again on Tuesday and Wednesday.

Hazard Mitigation Through Risk Management

“Risk management doesn’t get in the way of doing the mission – it is the way we do the mission.” The Risk Management Process assists in ensuring that critical factors and risks of the fireline work environment are considered during decision making. Good risk management utilizes a five-step process:

● Step 1—Situational Awareness:

- Obtain information.
- Scout the fire.
- Identify hazards—those likely to result in a negative impact.
- Consider all aspects of current and future situations.
- Consider known historical problem areas (Apply information from the Fire Danger Pocket Card.).
- Recognize the need for action.
- Demonstrate ongoing awareness of fire assignment status.
- Note deviations.
- Attempt to determine why discrepancies exist with information before proceeding.

● Step 2—Hazard Assessment:

- Assess hazards to determine risks (e.g., fire behavior, snags, unburned fuels, work/rest).
- Use the Look Up, Down, and Around; and the Tactical Watch Outs (both located in the Incident Response Pocket Guide) to identify high-risk tactical hazards.
- Assess the impact of each hazard in terms of potential loss, cost, and mission/operational degradation based on probability and severity (probability—how likely an event will occur; severity—consequences if the event occurs). Keep in mind that increased exposure time increases probability.

● Step 3—Hazard Control:

- Determine the best approach to mitigate or control the risk from the hazards assessed.
- Establish controls (e.g., anchor point, LCES, utilize downhill checklist, limit exposure time).
- As control measures are developed, reevaluate each risk until it is reduced to a level where benefits outweigh potential costs.
