

**National Interagency Coordination Center
Incident Management Situation Report
Thursday, May 22, 2008 – 0530 MDT
National Preparedness Level 2**

National Fire Activity

Initial attack activity:	Light (179 new fires)
New large fires:	4 (*)
Large fires contained:	0
Uncontained large fires:	13
Area Command Teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	1
Type 2 IMTs committed:	4
Fire Use Teams committed:	0

** Uncontained large fires does not include WFU or confine/contain incidents. **

Southern Area (PL 2)

New fires:	56
New large fires:	1
Uncontained large fires:	8
Type 1 IMTs committed:	1
Type 2 IMTs committed:	2

Tracy, National Forests in Florida. Three miles northeast of Paisley, FL. Brush and pine. Extreme fire behavior with long range spotting. Residences threatened and evacuations in effect.

Mustang Corner, Everglades NP. IMT 1 (Quesinberry). Fifteen miles southwest of Kendall, FL. Grass. Minimal fire activity.

Brevard Complex (6 fires), Florida DOF. Transfer of command from Florida IMT 2 (Beauchamp) back to the local unit occurred yesterday. Brevard County, FL. Southern rough. Minimal interior burning.

Childress Ranch, Texas Forest Service. IMT 2 (Hannemann). IMT is also managing the Juno fire. Twenty miles southwest of Ozona, TX. Chaparral, grass and cedar. Creeping and smoldering with isolated torching. Reduction in acreage due to more accurate mapping.

Myakka Cut, Florida DOF. Five miles north of Clewiston, FL. Grass. Minimal fire activity.

Mud Swamp New River, National Forests in Florida. Five miles northeast of Sumatra, FL. Southern rough. Isolated torching with short-range spotting.

Browntown, Georgia Forestry Commission. Three miles northeast of Atkinson, GA. Southern rough. No new information.

Juno, Texas Forest Service. Ten miles south of Juno, TX. Grass, juniper and cedar. Isolated torching.

Thunderstorm Safety

Thunderstorms cause significant hazards for wildland firefighters, including downbursts that can cause extreme fire behavior and lightning. When thunderstorm development is likely, lookouts should be posted and aware of signs of a developing storm. A sudden reversal in wind direction, a noticeable rise in wind speed, and a sharp drop in temperature may note the mature stage of a storm. Heavy rain, hail and lightning occur only in the mature stage of a thunderstorm. During a storm, use the following guidelines:

- Do not lie down.
 - The best position is sitting on the pack or crouching with feet close together.
 - Avoid sitting directly on the ground, if possible; but, if necessary, keep feet and butt close together.
 - Avoid grouping together. Keep a minimum of 15 feet between people when possible.
 - Removing caulk boots will not provide safety if stocking covered or bare feet are then in contact with the ground--don't bother!
- "Stay out of dry creek beds" is correct for flash floods, but has nothing to do with lightning.
- Handheld radios (with short rubber antennas) or cell phones are safe to use. Communication is vital to crew safety. Do not use land line radios or radios with elevated antennas.
- Wide, open spaces are better than trees or clumps of trees in the vicinity. Ridge tops, etc., should be avoided.
- If you feel the hair on your arms or head "stand up," there is a high probability of a strike in the vicinity. Crouch or sit on a pack.
- Put down all tools.
- Take shelter in vehicles if possible.
