Predictive Services Discussion: An approaching trough of low pressure will bring cooler temperatures and higher relative humidity to southern California. Dry and windy conditions will develop across the Sierras into the southern Great Basin, as well as the southern Plains. The Southeast will see continued low relative humidity into early next week.

Aviation "Watch Out" Situations

As part of risk management, especially during high activity fires, each aviation manager and employee should be asking questions.

- Is the flight necessary?
- Who is in charge?
- Are all hazards identified and have you made them known?
- Should the operation or the flight be stopped due to a change in conditions? Consider the following:
 - Communications
 - Confusion
 - Personnel
 - Weather
 - Turbulence
 - Conflicting priorities
- Is there a better way to do it?
- Are you driven by the task and sense of urgency?
- Can you justify your actions?
- Are there other aircraft in the area?
- Will the pilot accept the mission?
- Are any guidelines being ignored or policies being broken?
- Are communications getting tense?
- Are you deviating from the assigned operation or flight?
