Incident Management Situation Report
Friday, January 30, 2009 – 0800 MST
National Preparedness Level 1**

National Fire Activity (Weekly Total)

Initial attack activity: Light (833 new fires)
 New large fires: 26 (*)
 Large fires contained: 30
 Uncontained large fires: 0
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 0
 Type 2 IMTs committed: 0
 Fire Use Teams committed: 0

** Uncontained large fires do not include WFU or confine/contain incidents. **

Predictive Services Discussion: For eastern New Mexico, Texas and Oklahoma, dry weather is on tap today with increasing winds over north Texas and the Oklahoma Panhandle on Saturday. Humidities will moderate Sunday and Monday with showers over eastern Texas. In Florida, a cold front will bring showers to the central and southern sections today with drier air filtering into the north. Low humidity is expected over most of the state Saturday. An approaching storm system will bring higher humidity Sunday with rain expected on Monday.

Managing Vehicle Traffic in Smoke

Smoke has the potential to cause safety hazards to vehicle traffic in the vicinity of active fires (both wildfires and prescribed), especially at night. The following traffic-related items should be considered and addressed in local unit planning documents prior to an incident/project.

- Identification, location, and phone numbers of local units that have law enforcement and traffic control responsibilities in the smoke-impacted areas. Review any local agreements with these agencies presently in place.
- Identification of important, public roads that may be impacted by smoke
- Identification of adequate equipment and trained personnel to control traffic. This may include warning signs, communications equipment (preferably not using the active fire frequency) and vehicles equipped with warning or flashing lights.
- Identification and phone numbers of radio and television stations that can issue traffic advisories for the smoke-impacted area
- Identification of alternative traffic routes as part of the incident/project traffic plan
- Identification of traffic routes subject to temperature inversions as well as contributory factors such as fog and ice
- When potential smoke-related problems are identified:
 - o Advise the Incident Commander, Burn Boss, or Agency Administrator that severe smoke exists.
 - o Notify local law enforcement units and highway departments of a potential problem.
 - o Implement preplanned actions such as posting smoke warning signs.
 - o Ensure that proper equipment is ready and appropriate personnel are briefed on contingency plans and are available to control traffic.
