

**National Interagency Coordination Center
Incident Management Situation Report
Wednesday, July 8, 2009 – 0530 MDT
National Preparedness Level 1**

National Fire Activity

Initial attack activity: Light (172 new fires)
 New large fires: 2 (*)
 Large fires contained: 0
 Uncontained large fires: 13
 Area Command Teams committed: 0
 NIMOs committed: 2
 Type 1 IMTs committed: 0
 Type 2 IMTs committed: 4

** Uncontained large fires do not include confine/contain incidents. **

Predictive Services Discussion: Continued cool weather today over the Northwest quarter of the country with scattered showers and thunderstorms, mainly over portions of Idaho and Montana. Dry, gusty winds are expected from the Sierras to the Rockies. The Southwest and Texas will be hot with a few thunderstorms. In Alaska, it will be cooler with gusty winds and scattered thunderstorms.

Retardant Drop Safety

Having retardant dropped on a fire should be a routine event. However, there are risks associated with retardant drops that can pose serious threats to personnel and equipment. Consider the following for all drops:

- Be aware of the location of lead planes and airtankers during retardant drop operations.
- Be sure you have positive contact with the lead plane or airtanker before the drop.
- Personnel can be injured by the impact of retardant drops. Clear personnel out of the target area when the drop is conducted. If an individual is unable to retreat to a safe place, the best method for minimizing injury from the drop is to:
 - Hold your handtool away from your body.
 - Lie face down with hardhat in place and head toward the oncoming aircraft.
 - Grasp something firm to prevent being carried or rolled about by the retardant.
 - Do not run unless escape is ensured.
 - Get clear of dead snags and tops.
 - Be aware of rolling debris below the drop site in steep terrain.
- Working in an area covered by retardant should be done with caution due to slippery surfaces.
- If possible, wash the retardant off your skin to prevent irritation.
