

**National Interagency Coordination Center
Incident Management Situation Report
Saturday, July 25, 2009 – 0530 MDT
National Preparedness Level 2**

National Fire Activity

Initial attack activity: Moderate (257 new fires)
 New large fires: 3 (*)
 Large fires contained: 1
 Uncontained large fires : ** 11
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 0
 Type 2 IMTs committed: 2

Nationally, there are 56 large fires being managed with minimal or no resource commitment that are not shown on today's report.

** Uncontained large fires do not include confine/contain and resource benefit incidents. **

Northern Rockies Area (PL 2)

New fires: 77
 New large fires: 1
 Uncontained large fires: 1

* **Rescue**, Helena NF. Twenty-two miles northeast of Helena, MT. Timber and grass. Moderate fire activity.

Bielenburg, Beaverhead/Deerlodge NF. Transfer of command from IMT2 (Secrest) back to local unit occurred yesterday. Confine/contain management strategy. Nine miles southwest of Deerlodge, MT. Dead and down timber. No further information received. Reduction in acreage due to more accurate mapping. Last report unless significant activity occurs.

Predictive Services Discussion: Scattered, mostly wet thunderstorms will develop today from the Washington Cascades eastward into Idaho and Montana. Mixed wet and dry thunderstorms will develop across portions of the southern Great Basin into Wyoming, with wetter storms further south over southern Utah and the Southwest. Alaska will warm up and dry out across the interior and east with a decrease in thunderstorms.

Ash Pit Hazards

Ash pits are an inherent and invisible risk to wildland firefighters that can cause severe burns and injuries. Ash pits are created when organic combustibles consume underground and empty space is created that is undetectable from the surface.

● Environmental factors that increase the risk of ash pit formation after a wildfire:

- Extensive root systems of trees and shrubs.
- Deep duff or peat, the organic layer covering mineral soil.
- Landscapes that have once been cultivated or manipulated by heavy equipment ie, old dozer piles, sawmills, timber sale yards or decking areas.
- Small rodent holes that have become filled with decadent combustible debris ie, beaver holes near dams and stream beds, Badger and Coyote dens.
- White ash is sometimes an indicator as are groups of hovering insects.

● Mitigation measures to consider:

- Identification of high risk landscape.
- Identify and flag all hazardous discovered ash pits.
