

**National Interagency Coordination Center
Incident Management Situation Report
Wednesday, July 29, 2009 – 0530 MDT
National Preparedness Level 2**

National Fire Activity

Initial attack activity: Moderate (251 new fires)
 New large fires: 4 (*)
 Large fires contained: 0
 Uncontained large fires : ** 20
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 0
 Type 2 IMTs committed: 5

Nationally, there are 63 large fires being managed with minimal or no resource commitment that are not shown on today's report.

** Uncontained large fires do not include confine/contain and resource benefit incidents. **

Northwest Area (PL 3)

New fires: 32
 New large fires: 0
 Uncontained large fires: 6
 Type 2 IMTs committed: 3

McGinnis Creek, John Day Unit, Oregon DOF. Oregon IMT2 (Savage). Ten miles southwest of Kimberly, OR. Timber, brush and grass. Smoldering with occasional flare-ups. Structures threatened.

Johnson Lake Complex (4 fires), Colville Agency, BIA. Washington IMT2 (Reed). Six miles northeast of Nespelem, WA. Timber and grass. Smoldering.

Cougar Creek, Malheur NF. IMT2 (Batten). Ten miles south of John Day, OR. Juniper, brush and grass. Moderate fire activity.

Predictive Services Discussion: Hot, dry and unstable conditions will continue across the West Coast states today. Isolated dry thunderstorms are possible across portions of northern California and southern Oregon. Mixed wet and dry thunderstorms will continue across the southern Sierra Nevada and the southern Great Basin, with wetter storms further east and south. Dry and windy conditions will continue in south Texas. The Alaska interior will be hot and dry with strong winds over portions of the eastern interior.

Fatigue/Stress

Accumulated (Chronic) Fatigue is defined as fatigue from which normal rest does not produce recovery. Accumulated fatigue is often caused by extended periods of stress with inadequate recovery periods, which results in decreased productivity, compromised immune function, and reduced alertness. Fatigued workers perform poorly, behave carelessly, tolerate greater errors and become inattentive. Chronic fatigue often results in increased stress, which may present itself through certain behavioral and physiological indicators, such as those described below:

- Decreased motivation and low morale.
- Increased irritability and depression.
- Confused, poor problem solving.
 - Poor abstract thinking poor attention/decisions, poor concentration/memory
- Altered state of alertness.
 - A marked increased or decreased awareness of surroundings.
- Physical reactions (any of these symptoms may indicate need for medical evaluation. When in doubt, contact a medical professional).
 - chills, thirst, nausea, fainting, twitches, vomiting, dizziness, weakness, chest pain, headaches, elevated blood pressure, rapid heart rate, muscle tremors, profuse sweating, difficulty breathing
- Extreme emotional responses.
 - fear, panic, intense anger, emotional outbursts, feeling overwhelmed, loss of emotional control, inappropriate emotional response
- Social/behavioral changes.
 - withdrawn, antisocial acts, erratic movements, change in speech patterns, change in usual communications, alcohol or substance abuse
- Recommendations for chronic fatigue/stress are:
 - Take longer periods of rest/recovery
 - Ensure that workers are adequately rested before they begin workshifts
 - Slow the work pace to a moderate level on physically demanding tasks
 - Provide periodic rest breaks to allow physical and mental recovery
 - Alternate between heavy and light tasks
 - Change assignments to prevent boredom
 - Provide breaks, naps, or time off after tasks have been completed
 - Eat wellbalanced meals regularly, with energy supplements during periods of high exertion.
 - Maintain hydration
 - Ensure workers maintain good personal hygiene
 - maintain high standards of physical fitness and work capacity
 - Seek medical attention when in doubt of symptoms
 - In extreme cases, personnel may need to be relieved of their duties.
