

**National Interagency Coordination Center
Incident Management Situation Report
Saturday, June 27, 2009 – 0530 MDT
National Preparedness Level 1**

National Fire Activity

Initial attack activity: Light (185 new fires)
 New large fires: 1 (*)
 Large fires contained: 3
 Uncontained large fires: 1
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 0
 Type 2 IMTs committed: 0

** Uncontained large fires do not include confine/contain incidents. **

FLS – Florida DOF TXS – Texas Forest Service

Predictive Services Discussion: A high pressure ridge will build over the West today for warming and drying conditions. Early to mid-day foehn winds are likely to develop across portions of the mid California coast and the northern Sacramento Valley. Elsewhere, wet thunderstorms are likely across the Four Corner states. Alaska will continue to see showers and thunderstorms.

Extreme Fire Behavior

Extreme fire behavior has always been present in cases of shelter deployment. It is critical for firefighters to maintain situational awareness of live and dead fuel moisture conditions as well as predicted and current weather conditions. As fire behavior changes, it is critical to act decisively to the changing situation.

● Discuss the following indicators of extreme fire behavior:

- Relative humidity less than 15%
- 1-hour fuel moisture less than 5%
- Trees crowning inside the fireline
- Smoldering fires that exist in the early part of the day are beginning to burn very actively as the day progresses.
- Approaching thunderheads with dark clouds beneath
- Presence of dust devils indicating an unstable atmosphere
- Increased spotting
- Sudden calm
- High clouds moving fast in direction different from surface wind
- Predicted Haines Index of 5 and 6 in those areas where this level is a good indicator of atmospheric instability
