Incident Management Situation Report
Friday, March 13, 2009 – 0800 MDT
National Preparedness Level 1**

National Fire Activity

Initial attack activity:	Moderate (277 new fires)
New large fires:	1 (*)
Large fires contained:	9
Uncontained large fires:	9
Area Command Teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	1
Fire Use Teams committed:	0

** Uncontained large fires do not include WFU or confine/contain incidents. **

[Link](#) to Geographic Area daily reports.

The U.S. has mobilized three Burned Area Emergency Response teams, one 20-person suppression crew and 15 fire specialists and managers to Australia.

Southern Area (PL 2)

New fires:	229
New large fires:	1
Uncontained large fires:	9
Type 2 IMTs committed:	1

2009 Winter Initial Attack, Texas Forest Service. Texas IMT 2 (Bennett). IMT is supporting multiple fires in west Texas. Acres reported are a cumulative total.

Juniper Springs, National Forests in Florida. Nine miles east of Silver Springs, FL. Southern rough and downed heavy fuels. Active fire behavior. Structures threatened. Campground closures in effect.

Powder Horn II, Texas Forest Service. Three miles northwest of Port O'Connor, TX. Grass. Minimal fire activity.

Bent Gate, Florida DOF. Five miles northwest of Titusville, FL. Grass. Moderate fire activity.

Polar, Texas Forest Service. Started on private land twenty-eight miles southeast of Post, TX. Juniper and grass. No new information. Last report unless new information is received.

Natum Nibii, Osage Agency, BIA. Five miles southwest of Hominy, OK. Hardwood litter and grass. No new information. Last report unless new information is received.

Graphite, National Forests in North Carolina. Five miles northwest of Old Fort, NC. Hardwood litter. Moderate fire activity.

Sandyhill, Texas Forest Service. Started on private land thirty-seven miles northwest of Houston, TX. Timber, brush and grass. No new information. Last report unless new information is received.

Sweetwater Creek, National Forests in Mississippi. Five miles south of New Augusta, MS. Timber and grass. Minimal fire activity. Last report unless significant activity occurs.

MTF - Mark Twain NF

Predictive Services Discussion: Cool temperatures will continue for the eastern half of the country under a large high pressure system. A low pressure system will bring a chance of thunderstorms to the Southwest and a frontal boundary will spread precipitation across the southern Great Plains.

Falling Snags

Falling snags (dead, standing trees without leaves or needles in the crowns) present a significant hazard to wildland firefighters. Snags typically have much lower fuel moistures than live, green trees; and they burn more readily. In the process, they often throw spot fires far in advance of the main fire and often burn through more quickly than green trees, falling with little or no warning.

- The risk of injuries from falling snags increases during the night operational period when visibility is greatly reduced.
- While the cooler, nighttime period is generally a more effective time to gain control of wildfires, the increased risk from unseen falling snags may limit the widespread use of crews at night in areas of dead and dying timber.
- Environmental conditions that increase risk from falling snags:
 - Strong winds
 - Night operations
 - Steep slopes
 - Diseased or bug-killed areas
- Things to consider when assessing the potential hazards of both snags and green trees:
 - Trees have been burning for an extended period.
 - High-risk tree species (those that are known for rot and shallow root systems) are in the area.
 - Numerous downed trees
 - Dead or broken tips and limbs overhead
 - Accumulation of downed limbs
 - Absence of needles, bark or limbs
 - Leaning or hung-up trees
- Mitigation measures to take:
 - Identify and flag all high-risk snags and green trees.
 - Keep personnel out of the high-risk areas until the hazard has been removed.
 - Establish lookouts.
