Incident Management Situation Report
Thursday, March 26, 2009 – 0800 MDT
National Preparedness Level 1**

National Fire Activity

Initial attack activity: Light (143 new fires)
 New large fires: 4 (*)
 Large fires contained: 7
 Uncontained large fires: 9
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 0
 Type 2 IMTs committed: 1

[Link](#) to Geographic Area daily reports.

The U.S. has mobilized one Burned Area Emergency Response team and one fire manager to Australia.

Southern Area (PL 2)

New fires: 85
 New large fires: 2
 Uncontained large fires: 7
 Type 2 IMTs committed: 1

2009 Winter Initial Attack, Texas Forest Service. Texas IMT 2 (Bennett). IMT is supporting multiple fires in west Texas. Acres reported are a cumulative total.

Peach Orchard, Osage Agency, BIA. Four miles north of New Prue, OK. Hardwood litter and grass. Minimal fire activity.

Brickyard, National Forests in Florida. One mile south of Sumatra, FL. Southern rough. No new information.

Woody, Florida DOF. Nine miles north of Deltona, FL. Southern rough. Minimal fire activity.

Indian Lake, Florida DOF. Three miles west of Daytona Beach, FL. Southern rough. Active fire activity.

Old Fifty, Florida DOF. One mile southwest of Richloam, FL. Brush. Smoldering and creeping.

Matanzas, Florida DOF. Three miles southwest of St. Augustine, FL. Southern rough. Minimal fire activity.

MOF – Monongahela NF

Predictive Services Discussion: Strong winds and low relative humidity will continue across New Mexico and west Texas, and expand across southern Arizona and the Lower Colorado River Valley. The East will see improving conditions as precipitation spreads across the eastern states. The exception to this will be Florida as they will miss out on much of the precipitation; however relative humidity values will improve.

Common Denominators of Fire Behavior on Tragedy Fires

Five common denominators that contribute to accidents/incidents have been identified through studies of tragedy fires. It is important for firefighters to readily recognize the following common denominators so that future tragedies can be prevented:

- Most incidents happen on smaller fires or on isolated portions of larger fires.
- Most fires are innocent in appearance before unexpected shifts in wind direction and/or speed results in flare-ups or extreme fire behavior. In some cases, tragedies occur in the mopup stage.
- Flare-ups generally occur in deceptively light fuels, such as grass and light brush.
- Fires run uphill surprisingly fast in chimneys, saddles, gullies, and on steep slopes.
- Some suppression tools, such as helicopters or airtankers, can adversely affect fire behavior. The blasts of air from low-flying helicopters and airtankers have been known to cause flare-ups
