

**National Interagency Coordination Center
Incident Management Situation Report
Friday, October 30, 2009 – 0530 MDT
National Preparedness Level 1**

National Fire Activity

Initial attack activity: Light (61 new fires)
New large fires: 0 (*)
Large fires contained: 0
Uncontained large fires : ** 1
Area Command Teams committed: 0
NIMOs committed: 0
Type 1 IMTs committed: 0
Type 2 IMTs committed: 0

Nationally, there are 46 large fires being managed with minimal or no resource commitment that are not shown on today's report.

** Uncontained large fires do not include confine/contain and resource benefit incidents.

[Link](#) to Geographic Area daily reports.

This will be the last daily Incident Management Situation Report. This report will be posted every Friday at 0800 Mountain Time unless significant activity occurs.

Southwest Area (PL 2)

New fires: 24
New large fires: 0
Uncontained large fires: 1

Three Peaks, Papago Agency, BIA. Ten miles northwest of Sasabe, AZ. Brush and grass. No new information.

Predictive Services Discussion: A large high pressure ridge will build over the West today beginning a warming trend that will extend into the weekend. Winds will decrease across the Southwest and California; however winds will remain strong across portions of the Rocky Mountain and Northern Rockies Areas.

[Link](#) to Predictive Services Outlook products.

Today's discussion is from the
LCES (Lookouts, Communication, Escape Routes, and
Safety Zones) Category.

Escape Routes (part 2)

Escape Routes are the path the firefighter takes from their current locations, exposed to the danger, to an area free from danger. Notice that escape routes is used instead of escape route(s). Unlike the other components, there always must be more than one escape route available to the firefighter. Escape routes are probably the most elusive component of LCES. Their effectiveness changes continuously. As the firefighter works along the fire perimeter, fatigue and spatial separation increases the time required to reach the safety zone. The most common escape route (or part of an escape route) is the fireline. On indirect or parallel fireline, situations become compounded. Unless safety zones have been identified ahead, as well as behind, firefighters retreat may not be possible.

- Have you ever timed an escape route? If not how do you judge its effectiveness?
- Describe a time when you were uncomfortably distant from your escape route.
- Describe a method you have used to communicate an escape route to your crews.
