

**National Interagency Coordination Center
Incident Management Situation Report
Friday, April 2, 2010 – 0800 MT
National Preparedness Level 1**

National Fire Activity (Weekly Total)

Initial attack activity: Moderate (1,477 new fires)
 New large fires: 30 (*)
 Large fires contained: 23
 Uncontained large fires : ** 8
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 0
 Type 2 IMTs committed: 0

Nationally, there are 0 large fires being managed with minimal or no resource commitment.

** Uncontained large fires do not include confine/contain and resource benefit incidents.

Southern Area (PL 1)

New fires: 875
 New large fires: 21
 Uncontained large fires: 6

Hwy 1943 Complex (2 fires), Texas Forest Service. Eighteen miles southeast of Woodville, TX. Grass. Active fire behavior. Residences threatened. Evacuations in effect.

Sioux, Osage Agency, BIA. Six miles east of Prue, OK. Hardwood Litter. Active fire behavior. Residences threatened.

Smoot #2, Oklahoma DOF. Three miles southeast of Cyril, OK. Active fire behavior. Community of Cyril threatened.

Peach Orchard, Osage Agency, BIA. One mile north of Prue, OK. Hardwood litter. Active fire behavior.

Lead Mine Hollow 2, Oklahoma DOF. One mile northeast of Bunch, OK. Grass. No further information received.

South Cochran Prairie, Oklahoma DOF. Two miles northwest of Kenwood, OK. Hardwood litter. No further information received.

N5S – Capitan District, New Mexico State Forestry

Predictive Services Discussion: The main fire weather concerns over the next few days are 1) windy and low relative humidity conditions in southeast New Mexico and west Texas today and over portions of the Southwest on Monday, 2) dry, windy weather over portions of the Great Lakes through Saturday and 3) low humidity over the Southeast through Sunday.

[Link](#) to Predictive Services Outlook products.

Today's discussion is from the
Hazard Tree Category.

HAZARD TREE FELLING – SECURE FELLING AREA

DISCUSSION: The following fundamental safety principles for tree felling operations have been established based on repeated lessons learned following serious accidents. To protect sawyers, swampers, and operational personnel from exposure to potential traumatic injury or death during tree felling operations, the following safety procedures should be applied to all felling activities. Fireline supervisors should continue to monitor all felling operations to ensure the following safe job procedures are consistently applied:

- A secure felling area, **MINIMUM OF TWO AND ONE HALF (2.5) TIMES THE HEIGHT OF THE MATERIAL BEING FELLED IN ALL DIRECTIONS**, needs to be established and maintained by the faller during all tree felling operations. In addition, the entire downhill side on slopes must be secured if materials can fall/role for a long, unpredictable distance.
- No one shall be permitted in the secured felling area without the authorization of the faller.
- The faller shall establish a safety zone outside the secured area, and direct EVERYONE to remain there until all felling is completed, and an "all clear" has been communicated.
- Safety zones should be established, whenever practical, in the opposite direction of the planned fall, and at a distance of at least 2.5 times the height of the trees being felled.
- The faller shall assign Lookout(s). The lookout(s) shall have reliable communications with the faller, and other personnel adjacent to the secure areas.
- Competent lookouts shall be established and maintained by the faller at all major access points of roads and trails that afford access to the secured felling area.
- The faller will ensure that no hazards remain such as hang-ups, unstable logs, or other dangers before approving access or leaving the secured area
