

**National Interagency Coordination Center
Incident Management Situation Report
Thursday, April 22, 2010 – 0530 MT
National Preparedness Level 1**

National Fire Activity

Initial attack activity: Moderate (209 new fires)
 New large fires: 2 (*)
 Large fires contained: 0
 Uncontained large fires : ** 3
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 0
 Type 2 IMTs committed: 1

Nationally, there are 0 large fires being managed with minimal or no resource commitment.

** Uncontained large fires do not include confine/contain and resource benefit incidents.

Southern Area (PL 3)

New fires: 148
 New large fires: 0
 Uncontained large fires: 2
 Type 2 IMTs committed: 1

Stoney Fork, National Forests in North Carolina. Transfer of command from IMT 2 (Wilder) to local unit will occur 4/23. IMT is also managing the Bowling Green fire. Three miles southeast of Barnardsville, NC. Hardwood litter. Creeping and smoldering. Precipitation occurred over the fire area yesterday.

Bowling Green, National Forests in North Carolina. Five miles southeast of Erwin, TN. Hemlock and hardwood litter. Smoldering. Precipitation occurred over the fire area yesterday.

Today's discussion is from the
Miscellaneous Category.

ASH PIT HAZARDS

Ash pits are an inherent and hidden risk to wildland firefighters that can cause severe burns and injuries. Ash pits are created when organic combustibles consume underground and empty space is created that is imperceptible from the surface.

- Environmental factors that increase the risk of ash pit formation after a wildfire:
 - Extensive root systems of trees and shrubs.
 - Deep duff or peat, the organic layer covering mineral soil.
 - Landscapes that have once been cultivated or manipulated by heavy equipment, old dozer piles, sawmills, timber sale yards or decking areas.
 - Small rodent holes that have become filled with decadent combustible debris, beaver holes near dams and stream beds, badger and coyote dens.
 - White ash is sometimes an indicator of ash pits as are swarms of hovering insects.
 - With the sun behind the suspected ash pit, look for small nearly translucent smokes that dissipate quickly above the ground
 - Ash pits often give off the smell of incomplete combustion or of creosote burning.
- Mitigation measures to consider:
 - Identification of high risk landscape.
 - Identify and flag all hazardous discovered ash pits.

Have an idea? Have feedback? Share it.
