

**National Interagency Coordination Center
Incident Management Situation Report
Wednesday, April 28, 2010 – 0530 MT
National Preparedness Level 1**

National Fire Activity

Initial attack activity: Light (126 new fires)
 New large fires: 1 (*)
 Large fires contained: 2
 Uncontained large fires : ** 4
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 0
 Type 2 IMTs committed: 0

Nationally, there is 1 large fire being managed with minimal or no resource commitment.

** Uncontained large fires do not include confine/contain and resource benefit incidents.**

Eastern Area (PL 2)

New fires: 59
 New large fires: 0
 Uncontained large fires: 2

Floodwood Lake 82, Minnesota State Forestry. Six miles east of Goodland, MN. Grass. Smoldering.

Nelson Prairie, Detroit Lakes NWR. Started on private land three miles northeast of Bejou, MN. Hardwood litter and grass. No new information.

ALS – Alabama Forestry Commission

Predictive Services Discussion: A large storm system moving into the West today will bring dry and windy conditions extending from southeastern Arizona, through eastern New Mexico, and into extreme northwest Texas. Dry conditions will continue across the Great Lakes combined with windy conditions across much of Minnesota. Low relative humidity will persist across Virginia, the Carolinas and northern Florida.

[Link](#) to Predictive Services Outlook products.

Today's discussion is from the
Hazard Tree Category.

HAZARD TREE FELLING – HANG-UPS

- For decades, hazard trees have been associated with numerous deaths of workers assigned fire operations and project work. Incidents involving hazard trees are included in the top 5 life threats to wildland firefighters along with wildfire entrapment and motor vehicle accidents. In private industry, logging is recognized as the most dangerous occupation in the nation, and many associated fatalities involve felling hazard trees. Felling a hung-up hazard tree is a particularly hazardous and complex task.

- Sawyers are to be reminded on how vital it is to constantly apply and maintain situational awareness and assess risks, particularly when faced with problem of a **hang-up** hazard tree.
- In most cases, safely felling a hang-up requires extreme caution and expertise due to characteristic danger and complexity. The following are some topics experienced sawyers should review during 6 minutes for safety/tailgate safety discussions and cover in training modules specifically designed to address felling hang-up hazard trees:
 - Cut/No Cut (walk-a-way) criteria
 - Risk Assessment
 - Situational Awareness Checklist
 - Secure Felling Area
 - No Work Zones (NWZ)
 - Blasting option
 - Equipment/cable option
 - Role/responsibility of swamper/lookout
 - Escape routes
 - Pushing/driver tree opportunity
 - Felling trees tied together
 - Sidewinder potential
 - Hazards of obscured view of top
 - Need to keep looking up
 - Weak/spiked tops, limb location/condition/density, and hidden defect/rot
 - Prescribed step down (fence post/wafer) cutting techniques
 - Rope Technique
