

**National Interagency Coordination Center
Incident Management Situation Report
Friday, February 19, 2010 – 0800 MT
National Preparedness Level 1**

National Fire Activity (Weekly Total)

Initial attack activity: Light (218 new fires)
 New large fires: 2 (*)
 Large fires contained: 2
 Uncontained large fires : ** 0
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 0
 Type 2 IMTs committed: 0

Nationally, there are 0 large fires being managed with minimal or no resource commitment.

** Uncontained large fires do not include confine/contain and resource benefit incidents.

Fourteen incident management specialists have been mobilized to the State of Victoria, Australia. They are stationed at Orbost, Traralgon, Woori Yallock, Otways, Bendigo, Ballarat and Alexandra to supplement Victoria's Incident Management Team capacity and assist local offices in aviation management, community risk assessment, fuels management, and community bushfire protection planning.

Southern Area (PL 1)

New fires: 184
 New large fires: 2
 Uncontained large fires: 0

FLS - Florida DOF

Predictive Services Discussion: Today will be dry with low humidity for much of the Southeast. Rain will develop west of the Mississippi River on Saturday and spread across the rest of the Southeast on Sunday and Monday. Southern California will see rain and mountain snow today with the storm reaching the Southwest over the weekend. Another storm will move onshore into southern California on Sunday and Monday.

Today's discussion is from the
First Aid / Health Category.

HYPOTHERMIA

Hypothermia occurs when your core body temperature falls below normal. It can easily happen in cold winds or wetness. Hypothermia can also occur in moderately cool temperatures, particularly if coupled with dehydration. People tend to forget to drink on cool, wet days and can get hypothermic even when the temperature stays well above freezing.

- Symptoms of hypothermia include
 - Slurred speech
 - Weakness and loss of coordination
 - Confusion
 - Irrational behavior
 - Uncontrollable shivering (although, at extremely low body temperatures, shivering may stop)
 - Pale and cold skin
 - Drowsiness – especially in more severe stages
 - Slowed breathing or heart rate
- Your body automatically begins to shiver to warm itself. As your energy is used up to keep warm, you may reach a point where your body will be unable to warm itself. If left untreated, your body will gradually shut down; and you can die.
- You can avoid hypothermia with the following precautions:
 - Guard against dehydration.
 - Avoid fatigue.
 - Avoid cold winds.
 - Take precautions, change out of wet clothes.
 - Be aware of the symptoms and take action upon their onset.
- If you recognize hypothermia, take the following steps:
 - Move the patient to shelter.
 - Remove wet clothes and replace them with warm, dry garments.
 - If the victim is alert, give them food and warm liquids to drink.
