

**National Interagency Coordination Center
Incident Management Situation Report
Thursday, July 1, 2010 – 0530 MT
National Preparedness Level 2**

National Fire Activity

Initial attack activity: Light (142 new fires)
 New large fires: 3 (*)
 Large fires contained: 3
 Uncontained large fires: ** 10
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 0
 Type 2 IMTs committed: 3

Nationally, there are 43 large fires being managed to achieve multiple objectives.

** Uncontained large fires include only fires being managed under a full suppression strategy. **

VAD – Vale District, BLM

Predictive Services Discussion: Thunderstorms are expected across much of the Intermountain West today with driest storms over Arizona, the eastern Great Basin, western Colorado and Wyoming. In addition, gusty winds are on tap for the Great Basin and Wyoming. Alaska will be warm and dry with scattered thunderstorms over the Interior.

[Link](#) to Predictive Services Outlook products.

**Today's discussion is from the
Fireline Safety Category.**

DOWNHILL FIRELINE CONSTRUCTION CHECKLIST

Downhill fireline construction is hazardous in steep terrain, fast-burning fuels, or rapidly changing weather. Downhill fireline construction should not be attempted unless there is no tactical alternative. When building downhill fireline, the following is required:

- Crew supervisor(s) and fireline overhead will discuss assignments prior to committing crew(s). Responsible overhead individual (TFLD or ICT4 qualified or better) will stay with resources until the job is completed.
- Decision will be made after proposed fireline has been scouted by supervisor(s) of involved crew(s).
- LCES will be coordinated for all personnel involved.
 - Crew supervisor(s) is in direct contact with lookout who can see the fire.
 - Communication is established between all crews.
 - Ensure rapid access to safety zone(s) in case fire crosses below crew(s).
- Direct attack will be used whenever possible; if not possible, the fireline should be completed between anchor points before being fired out.
- Fireline will not lie in or adjacent to a chute or chimney.
- Starting point will be anchored for crew(s) building fireline down from the top.
- Bottom of the fire will be monitored; if the potential exists for the fire to spread, action will be taken to secure the fire edge.
- Can fire be carried with you?
