

**National Interagency Coordination Center
Incident Management Situation Report
Friday, July 9, 2010 – 0530 MT
National Preparedness Level 2**

National Fire Activity

Initial attack activity:	Light (189 new fires)
New large fires:	2 (*)
Large fires contained:	2
Uncontained large fires: **	5
Area Command Teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0

Nationally, there are 48 large fires being managed to achieve multiple objectives.

** Uncontained large fires include only fires being managed under a full suppression strategy. **

[Link](#) to Geographic Area daily reports.

Interagency personnel are assigned to a number of locations in the Gulf of Mexico to assess and mitigate impacts resulting from the Deepwater Horizon oil spill.

- Support to the Fish and Wildlife Service include these areas: Delta, Breton and Bon Secour National Wildlife Refuges, as well as Houma, LA and Mobile, AL.

- Support to the National Park Service include these areas: Gulf Islands National Seashore, Jean Lafitte Park and Preserve, Everglades National Park, Dry Tortugas, Biscayne National Park, De Soto National Memorial and Big Cypress National Preserve.

Southwest Area (PL 3)

New fires:	24
New large fires:	0
Uncontained large fires:	1

South Fork, Santa Fe NF. Twenty miles west of Espanola, NM. Timber. No further information received.

Brushy, Coronado NF. Previously reported confine/contain incident. Fifteen miles east of Elfrida, AZ. Grass. No further information received. Last report unless significant activity occurs.

Saffron, Grand Canyon NP. Previously reported limited perimeter control incident. Twenty miles northeast of Supai, AZ. Timber. Active fire behavior. Last report unless significant activity occurs.

Alaska Area (PL 3)

New fires: 6

New large fires: 1

Uncontained large fires: 3

Louie Creek, Galena Zone, BLM. Started on private land eight miles southwest of Huslia, AK. Black spruce and mixed hardwoods. Moderate fire activity with isolated single tree torching. Structures threatened.

Pat Creek, Upper Yukon Zone, BLM. Fifteen miles north of Stevens Village, AK. Black spruce and tundra. Moderate fire activity with isolated group torching.

Fiasco Lake, Upper Yukon Zone, BLM. Ten miles north of Circle City, AK. Black spruce and brush. Smoldering.

* **Tchulkade**, Upper Yukon District, BLM. Confine/contain incident. Thirty-four miles northeast of Circle City, AK. Black spruce and mixed hardwoods. No further information received. Last report unless significant activity occurs.

Predictive Services Discussion: Thunderstorms are expected over Oregon, northern California, the Sierras, Great Basin, Southwest and western Colorado. It will be very warm across the West, particularly in the Northwest and Great Basin. The northern Alaska Interior will be warm and dry with a few thunderstorms.

**Today's discussion is from the
Hazmat Category.**

Hydrogen Sulfide Gas (H²S)

Oil and Gas production across the western United States has increased dramatically and can have an impact on fire suppression operations and expose fire personnel to health hazards. Many parts of the western United States also have natural occurring coal seams that can also produce potentially toxic gases as well.

● Fire personnel can be exposed to hydrogen sulfide gas (H²S) which is a commonly expelled during oil and gas extraction operations and some coal seam seeps. H²S is a highly toxic, flammable, colorless gas produced by decaying organic matter and has a characteristic odor of rotten eggs at low concentrations; however, the sense of smell is paralyzed at airborne levels above 50 to 150 ppm. At higher concentrations, H²S can result in respiratory paralysis, asphyxial seizures, and death. Characteristics of a fatal exposure are rapid "knock down", respiratory depression, tremors, blurred vision, cyanosis, seizures and tachycardia. H²S vapor can also travel considerable distances to a source of ignition and flash back explosively and gives off corrosive and poisonous oxides of sulfur upon combustion.

● To avoid exposure to H²S, here are some DO's and DON'Ts concerning fire operations near oil and gas operations:

● DOs:

- If you are responding to a known oil and gas pad or coal seam areas, DO contact local petroleum engineer or resource advisor.
- If your unit has known oil and gas operations or coal seams, DO ensure that every firefighter is provided with training on H²S.
- If you happen upon a remote oil and gas pad area, DO cordon off the area with flagging and deny entry and DO modify suppression tactics to avoid the area.
- DO avoid low lying drainage, ravines, and gullies near oil and gas pads and coal seams as they tend to accumulate higher air concentrations of potentially toxic gases, especially during early morning hours when air has the tendency to sink.
- If you suspect that someone has been exposed to H²S, DO seek medical care immediately at the nearest hospital.

● DON'Ts:

- DON'T locate fire camps, ICPs, or helispots on or near oil and gas pads.
- DON'T depend on sense of smell for warning - H²S causes rapid deterioration of sense of smell.
- DON'T attempt fire suppression on or in close proximity to oil and gas pads. Local petroleum engineer or resource advisor may recommend safe working distances and firefighters may also be given H²S monitors when working near oil and gas pad operations and/or coal seams.
- DON'T wait to seek medical attention if H²S exposure is suspected.
