

**National Interagency Coordination Center
Incident Management Situation Report
Thursday, July 15, 2010 – 0530 MT
National Preparedness Level 2**

National Fire Activity

Initial attack activity: Light (115 new fires)
 New large fires: 1 (*)
 Large fires contained: 1
 Uncontained large fires: ** 8
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 0
 Type 2 IMTs committed: 2

Nationally, there are 39 large fires being managed to achieve multiple objectives.

** Uncontained large fires include only fires being managed under a full suppression strategy. **

[Link](#) to Geographic Area daily reports.

Interagency personnel are assigned to a number of locations in the Gulf of Mexico to assess and mitigate impacts resulting from the Deepwater Horizon oil spill.

- Support to the Fish and Wildlife Service include these areas: Delta, Breton and Bon Secour National Wildlife Refuges, as well as Houma, LA and Mobile, AL.

- Support to the National Park Service include these areas: Gulf Islands National Seashore, Jean Lafitte Park and Preserve, Everglades National Park, Dry Tortugas, Biscayne National Park, De Soto National Memorial and Big Cypress National Preserve.

Predictive Services Discussion: Significant fire potential is forecast for southern Wyoming and western Colorado due to hot and dry conditions. Strong high pressure building over the West will bring hotter and drier weather to most of the region. A mixture of wet and dry thunderstorms is expected over portions of California, Arizona, New Mexico and Colorado.

[Link](#) to Predictive Services Outlook products.

Today's discussion is from the
Fireline Safety Category.

INITIAL ATTACK FIRE SIZEUP/SAFETY

Having a good sizeup is important in order to give both the Incident Commander (IC) and fire management a good idea of what problems exist and what resources may be needed for effective firefighting.

- Use the following reporting factors for size-up and reference local fire size-up cards. Discuss others that may be used.

- Fire name and location
- Terrain (slope, aspect, elevation) and position of fire on the slope
- Size of fire
- Fuel type, anticipated control problems, and spread potential
- Values threatened
- Weather conditions (wind speed and direction)
- Fire behavior
- Resources on the fire and those needed
- Estimated containment and control times
- Cause (known, suspected, under investigation)

- After your initial size-up of the fire and/or transition from an initial attack IC, answer the following questions. Repeat this analysis whenever there is a change, or predicted change, in conditions on the fire.

- Have you sized up the fire and relayed the information to dispatch?
- Is the observed fire weather consistent with the forecast?
- Can you control the fire with the resources available (on the incident or soon to be on the incident) and under the expected conditions?
- Have you developed a plan to attack the fire (direct or indirect, anchor points, escape routes, head or flank attack, priority areas); and have you communicated this information to all personnel assigned to the incident, including new arrivals?
- Are lookouts in place or can you see all of the fire area?
- Can you communicate with everyone on the fire and with dispatch?
- Are escape routes and safety zones established? If you are using the black, is it completely burned and without a reburn potential?
- Are safety and the standard fire orders being followed and/or mitigated?
- Do you have a complete list of what resources have been ordered for the fire?
- Will you control the fire before the next operational period; and if you won't, or the size of the organization exceeds the IC's capability to manage, have you informed the agency Fire Management Officer?
