

**National Interagency Coordination Center
Incident Management Situation Report
Wednesday, October 27, 2010 – 0530 MT
National Preparedness Level 1**

National Fire Activity

Initial attack activity:	Light (53 new fires)
New large fires:	2 (*)
Large fires contained:	1
Uncontained large fires: **	8
Area Command Teams committed:	0
NIMOs committed:	0
Type 1 IMTs committed:	0
Type 2 IMTs committed:	0

Nationally, there are 32 large fires being managed to achieve multiple objectives.

** Uncontained large fires include only fires being managed under a full suppression strategy.

Southern Area (PL 3)

New fires:	31
New large fires:	2
Uncontained large fires:	8

The Crippled Chinook, National Forests in Mississippi. Previously reported incident. Six miles southwest of Augusta, MS. Timber and southern rough. Minimal fire activity. Structures threatened.

Wrangler, Kisatchie NF. Twenty miles southwest of Natchitoches, LA. Southern rough, pine and hardwood. Minimal fire activity.

Bombing Range Nine 21, National Forests in Florida. Eleven miles west of Astor, FL. Timber and brush. Minimal fire activity.

Gore Store Road, Texas Forest Service. Twenty miles southeast of Woodville, TX. Timber. No further information received.

Locky Hollow, George Washington and Jefferson NF. Fourteen miles northeast of Harrisonburg, VA. Timber. No new information.

Fish Trap, Daniel Boone NF. Nine miles northwest of Campton, KY. Hardwood litter. No further information received.

* **Three Mile Branch**, Arkansas Forestry Commission. Eleven miles southwest of Hermitage, AR. Timber. No further information received.

* **Toothman**, Osage Agency, BIA. Three miles northeast of Prue, OK. Timber. Moderate fire activity.

KYS – Kentucky DOF

Predictive Services Discussion: A large low pressure system will continue to sit over the Great Lakes region with dry and windy conditions across portions of the central and southern Great Plains. Windy conditions will also develop across the Ohio River Valley, however recent precipitation will limit fire potential. Gusty northeast winds will develop over the mountains and below the canyons and passes of southern California.

[Link](#) to Predictive Services Outlook products.

**Today's discussion is from the
First Aid / Health Category.**

SERIOUS INJURY PROCEDURES

Dealing with serious injuries on the fireline can add even more stress to our hectic work environment. In the event a fireline accident occurs, adherence to the following principles is important to insure an adequate and appropriate response is made.

- Before entering the scene, determine whether it is safe to approach. Look for hazards as well as what may have happened. It may be necessary to move the patient or to make the area safe before doing an assessment.
- Provide first aid and assess the extent of the injuries.
- Make contact with your supervisor. Depending on the complexity of the fire, that could be your crew boss, the Division Supervisor, the IC, or even dispatch. If your fire has a medical plan, follow the plan.
- Provide them with accurate, concise information on the following
 - Number of people injured
 - Type of injuries
 - Severity of injuries (light, moderate, severe, life threatening)
 - Mechanism of injury
 - Vital signs (pulse, respirations, level of consciousness, etc)
- Determine the best method of evacuation. Depending on the severity of injury or availability of resources, this decision may already be made for you.
- Keep the radio frequency clear of non-emergency traffic, provide updates of the patient's condition and await instructions.
- If evacuation is by helicopter, it may be necessary to construct a helispot. Document treatment provided in case it is necessary to send the information along with the patient in the aircraft.
- If the patient needs to be carried to a road, insure enough people are available to work in relays.
- Once the patient is clear, take a moment to write down witness statements, clean up notes and timelines, and document any other pertinent information.
